Anatomy for the FRCA John Wiley & Sons

This book provides two thousand multiple choice questions on human anatomy and physiology, separated into 40 categories.

The answer to each question is accompanied by an explanation.

Each category has an introduction to set the scene for the questions to come. However not all possible information is

provided within these Introductions, so an Anatomy and

Physiology textbook is an indispensable aid to understanding the

answers. The questions have been used in examinations for

undergraduate introductory courses and as such reflect the focus

of these particular courses and are pitched at the level to

challenge students that are beginning their training in anatomy

and physiology. The questions and answer combinations are to be used both by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition & dietetics, health sciences and students taking an anatomy and physiology course as an elective.

A Self-testing Supplement to Essential Anatomy MCQs in Anatomy for Part 1 FRCR Multiple Choice Questions in Anatomy with Detailed Answers for the First FRCR Examination Radiology has advanced at a great pace, allowing us a greater appreciation of anatomical detail. This has in turn placed a greater demand on the trainee radiologist's knowledge of anatomy. With these facts in mind the authors have written this collection of MCQs on radiological anatomy for the FRCR Part One exam. The questions are closely modelled on the examination, highlighting favoured

exam topics. To make efficient use of trainee radiologists time extended answers have been prepared. QBase Radiology 1 and 2 together represent a completely comprehensive resource for all postgraduate and undergraduate trainees in radiology. In combination, the books include 900 multiple choice questions (480 on Volume 1 and 420 on Volume 2) and the free CD-ROMs that accompany both books also contain all 900 MCQs and over 100 high quality radiological images. The powerful QBase examination analysis software allows the reader to attempt the same exams as printed in the book, but on screen, realistically replicating the examination situation. The user can also 'custom-build' their own exams based on their own choice of subjects and number of questions, sit an exam that is automatically set by the program using all of the questions on the CD, or they can sit a 'shuffled' version of an exam, whereby the question parts (A-E) are reorganised automatically to avoid pattern recognition. The software also allows the user to set their own 'confidence level' when taking an exam and it will automatically mark, analyse and store completed exams for future review and re-sitting, allowing the package to be used as a fully interactive self-learning tool.

Multiple Choice Questions in Ophthalmic and Neuroanatomy was written from notes that made by the author while preparing for the College of Ophthalmologists' primary examination. At the time it was difficult to gauge the standard expected as there were no questions available. This book aims to help many candidates who need to learn this sort of anatomy and hopes that its appeal extends beyond budding ophthalmologists and general surgeons to include optometrists and orthoptists. The questions deal with the following topics: osteology; anatomy of the head and neck; vascular anatomy; neuroanatomy; orbital and autonomic anatomy; ocular adnexae and extraocular muscles; cranial nerves and visual pathway; ocular anatomy; and embryology.
