The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Emergency Response Guidebook Seven Stories Press

This book provides the latest research advancements and findings for the scientific systematization of knowledge regarding digital governance and transformation, such as core concepts, foundational principles, theories, methodologies, architectures, assessment frameworks and future directions. It brings forward the ingredients of this new domain, proposing its needed formal and systematic tools, exploring its relation with neighbouring scientific domains and finally prescribing the next steps for laying the foundations of a new science. The book is structured into three main areas. The first section focuses on contributions towards the purpose, ingredients and structure of the scientific foundations of digital transformation in the public sector. The second looks at the identification and description of domain's scientific problems with a view to stabilizing research products, assessment methods and tools in a reusable, extendable and sustainable manner. The third envisions a pathway for future research to tackle broader governance problems via the applications of information and communication technologies in combination with innovative approaches from neighbouring scientific domains. Contributing to the analysis of the scientific perspectives of digital governance and digital transformation, this book will be an indispensable tool for students, researchers and practitioners interested in digital governance, digital transformation, information systems, as well as ICT industry experts and policymakers charged with the design, deployment and implementation of public sector information systems.

Soil erosion affects a large part of the Earth surface, and

accelerated soil erosion is recognized as one of the main soil threats, compromising soil productive and protective functions. The land management in areas affected by soil erosion is a relevant issue for landscape and ecosystems preservation. In this book we collected a series of papers on erosion, not focusing on agronomic implications, but on a variety of other relevant aspects of the erosion phenomena. The book is divided into three sections: i) various implications of land management in arid and semiarid ecosystems, ii) erosion modeling and experimental studies; iii) other applications (e.g. geoscience, engineering). The book covers a wide range of erosion-related themes from a variety of points of view (assessment, modeling, mitigation, best practices etc.).

Studies throughout the world have demonstrated the success of screening programs in significantly reducing breast cancer mortality rates. The revolution in imaging, through new advances in mammography, ultrasound, and magnetic resonance techniques, has increased the detection of minimal, often non-palpable, carcinomas in the early stages. A comprehensive overview for radiologists, pathologists, surgeons, and oncologists, Early Breast Cancer presents a wide-ranging analysis of diagnosis, pathology, and multidisciplinary management of the early breast cancer patient.

Does the identification number 60 indicate a toxic substance or a

flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

As intellectual engines of the university, professors hold considerable authority and play an important role in society. By nature of their occupation, they are agents of intellectual culture in Canada. *Historical Identities* is a new collection of essays examining the history of the professoriate in Canada. Framing the volume with the question, 'What was it like to be a professor?' editors Paul Stortz and E. Lisa Panayotidis, along with an esteemed group of Canadian historians, strive to uncover and analyze variables and contexts – such as background, education, economics, politics, gender, and ethnicity – in the lives of academics throughout Canada's history. The contributors take an in-depth approach to topics such as academic freedom, professors and the state, faculty development, discipline construction and academic cultures, religion, biography, gender and faculty wives, images of professors, and background and childhood experiences. Including the best and most recent critical research in the field of the social history of higher education and professors, *Historical Identities* examines fundamental and challenging topics, issues, and arguments on the role and nature

of intellectualism in Canada.

Despite new historical study of her contexts, Christina Rossetti continues to haunt the reader as a displaced subjectivity emptied of history. Through an analysis of the posthumous in her work, the construction of 'Christina Rossetti' by her brothers, and the history of reception, this study asks how 'speaking with the dead' can avoid critical ventriloquy. The figure of the mother is offered as a paradigm for theorising a new reading that refuses to exorcise the ghost of 'Christina Rossetti'.

For years, Derrick Jensen has asked his audiences, "Do you think this culture will undergo a voluntary transformation to a sane and sustainable way of life?" No one ever says yes. *Deep Green Resistance* starts where the environmental movement leaves off: industrial civilization is incompatible with life. Technology can't fix it, and shopping—no matter how green—won't stop it. To save this planet, we need a serious resistance movement that can bring down the industrial economy. *Deep Green Resistance* evaluates strategic options for resistance, from nonviolence to guerrilla warfare, and the conditions required for those options to be successful. It provides an exploration of organizational structures, recruitment, security, and target selection for both aboveground and underground action. *Deep Green Resistance* also discusses a culture of resistance and the crucial support role that it can play. *Deep Green Resistance* is a plan of action for anyone determined to fight for this planet—and win.

The 1848 treaty of Guadalupe Hidalgo that ended the Mexican-American War described a boundary between the two countries that was to be ascertained by a joint boundary commission effort. The section of the boundary along the Rio Grande from Presidio to the mouth of the Pecos River was arguably the most challenging, and it was surveyed by two American parties, one led by civilian surveyor M. T. W. Chandler in 1852, and the second led by Lieutenant Nathaniel Michler in 1853. Our understanding of these two surveys across the greater Big Bend has long been limited to the official reports and maps housed in the National Archives and never widely published. The discovery by Orville B. Shelburne of the journal kept by Dr. Charles C. Parry, surgeon-botanist-geologist for the 1852 party, has dramatically enriched the story by giving us a firsthand view of the Chandler boundary survey as it unfolded. Parry's journal forms the basis of *From Presidio to the Pecos River*, which documents the day-to-day working of the survey teams. The story Shelburne tells is one of scientific exploration under duress—surveyors stranded in towering canyons overnight without food or shelter; piloting inflatable rubber boats down wild rivers; rising to the challenges of a profoundly remote area, including the possibility of Indian attack. Shelburne's comparison of the original boundary maps with their modern counterparts reveals the limitations of terrain and equipment on the survey teams. Shelburne's book provides a window on the adventure, near disaster, and true accomplishment of the surveyors' work in documenting the course of the Rio Grande across the Big Bend region.

The International Maritime Dangerous Goods Code is the standard guide to all aspects of handling dangerous goods and marine

pollutants in sea transport. The Code lays down basic principles: detailed recommendations for individual substances, materials and articles, and a number of recommendations for good operational practice, including advice on terminology, packing, labelling, stowage, segregation and handling, and emergency response action. The Code has undergone many changes over the years, in both format and content, in order to keep up with the rapid expansion of the shipping industry. Amendment 40-20 includes revisions to various sections of the Code and to transport requirements for specific substances. It is mandatory as from 1 June 2022 but may be applied by Administrations in whole or in part on a voluntary basis from 1 January 2021

By far the majority of women presenting with a breast complaint will be diagnosed as having a benign rather than malignant condition. Despite this, clinical and research interest has always favoured breast cancer, and few publications have attempted to cover benign breast disorders as an independent entity focusing instead on benign breast disease in relation to breast cancer and none provide the complete and pragmatic coverage found in this text. Hughes, Mansel and Webster's Benign Disorders and

Diseases of the Breast represents the distillation of over 35 years of clinical experience and research in the Cardiff Clinic and is unique in its depth of coverage of the entire spectrum of benign breast complaints. The third edition of this critically acclaimed book provides practical and detailed management guidelines. Relevant investigations are discussed and clear advice is given for the most effective treatment strategies in each condition, including dealing with treatment failures and recurring problems. The underlying pathology and physiology are also discussed from the clinician's viewpoint to help understand clinical presentations and response to treatment.

"This second edition of Remediation Engineering will continue to be the seminal handbook that regulators must have on-hand to address any of the remediation issues they are grappling with daily. The book is wide-ranging, but specific enough to address any environmental remediation challenge." —Patricia Reyes, Interstate Technology Regulatory Council, Washington, DC, USA
"This book offers the researcher, teacher, practitioner, student, and regulator with state-of-the-art advances in conducting site investigations and remediation for common and emerging contaminants. It is revolutionary in its approach to conducting subsurface investigation, which greatly influences a successful and appropriate response in assessing and addressing environmental risk. This book is a giant leap forward in understanding how contaminants behave and how to reduce risk

to acceptable levels in the natural world." —Daniel T. Rogers, Amsted Industries Incorporated, Chicago, Illinois, USA "This text is a superb reference and a good tool for learning about state-of-the-art techniques in remediation of soil and groundwater. [It] will become a ready reference at many companies as the engineering community creates increased value from remediation efforts around the world." —John Waites, AVX Corporation, Fountain Inn, South Carolina, USA Remediation Engineering was first published in 1996 and quickly became the go-to reference for a relatively young industry, offering the first comprehensive look at the state-of-the-science in treatment technologies of the time and the contaminants they applied to. This fully updated Second Edition will capture the fundamental advancements that have taken place during the last two decades within all the subdisciplines that form the foundation of the remediation engineering platform. It covers the entire spectrum of current technologies that are employed in the industry and also discusses future trends and how practitioners should anticipate and adapt to those needs. Features: Shares the latest paradigms in remediation design approach and contaminant hydrogeology Presents the landscape of new and emerging contaminants Details the current state of the practice for both conventional technologies, such as sparging and venting Examines newer technologies such as dynamic groundwater recirculation and injection-based remedies to address both organic and inorganic contaminants. Describes the advances in site characterization concepts such as smart investigations and digital conceptual site models. Includes all-new color photographs and figures.
