The book starts from the very beginning, so when you are new to photo editing, that's no problem! The book starts with installing and configuring GIMP 2.10 to make it look and act as Photoshop. Then all aspects of photo editing are covered, and no stone will be left unturned! Everything will be shown in easy to follow steps. You will learn how to use masks, and how to make selections. In Chapter 5 we will go in to making professional selections with just a single click (this is not possible in Photoshop!) using the patented 'U-point technology'. The U-point technology is delivered by the Google Nik Collection, a professional high-end photo editing "plug-in" suite, used by professional photographers. The Google Nik Collection and its integration into GIMP will be discussed in its whole. So in addition to gaining great expertise in GIMP, this book will also cover the complete Google Nik Collection. We'll download and install the software, together with a special plugin that will let you work with the Google Nik Collection from out of GIMP. You will learn how to create black and white images at a professional level with the most powerful black and white plugin on the market, and you will learn how to sharpen images and remove noise. We'll look at making vignettes, and HDR photography. We'll look at the use of text, kerning text, and how to make eye-catching book covers. You'll learn everything about all the powerful blending modes, and the practical use of each blending mode will be shown and explained. You'll learn how to select hair, how to use and make patterns and gradients, and how to use and adjust a tablet. You will learn everything about brushes. How to create brushes yourself, the many special effects you can create with brushes (e.g. to create a flock of birds with just a single stroke, or to create grunge textures), and how to download free creative brushes. We will look at a popular skin retouching technique used by professionals called "frequency separation", and different

methods for dodging and burning (selectively darkening and lightening of an image). We will discuss color theory, and it's direct connection to the ways color is manipulated in photo manipulation programs. We'll discover creative filters that bring a different look and feel to your image. The book is created for the Windows (7,8,10) user. With some extra steps however, the Linux user can also follow along. The book has been printed in black and white to keep the price as low as possible. About the writer: Bernard 't Hooft has over 15 years of experience with professional photo editing, and teaches photo editing at the VolksUniversiteit in the Netherlands.

Written for all types of ITA programs an independent study course, a brief workshop, or extensive training this versatile text provides essential information for ITAs to develop strong teaching skills that ensure effective communication in the undergraduate classroom. The authors take the perspective that incoming ITAs are responsible for their own learning and teaching style. Each of the texts ten units includes work on English proficiency, teaching skills, and cultural awareness. Each unit centers around a common rhetorical teaching task in U.S. university classrooms: introducing oneself, introducing a syllabus, explaining a visual, defining a term, teaching a process, fielding questions, explaining complex topics at a basic level, presenting information over several class periods, and leading a discussion. Undergraduate textbook materials for fifteen academic fields are included in the appendix to provide ITAs with content relevant for practicing teaching and language skills. Because ITA programs vary in structure and number of training hours, the authors include a To the Instructor section, which is full of recommendations for the many ways the text can be used.
