A wistful love letter to the joys of flying and the fun, fashion, and glamour that go with it. Now, more than ever, nothing captures our yearning for travel, freedom, glamour, and adventure than the fantasy of flying away from it all. From Frank Sinatra dressed to the nines in the golden age of Pan Am to celebrities snapped in luxury leisurewear in the lounges today, airports have always afforded the most glamorous glimpses into that most enviable aspect of celebrity life--jet-setting in style. Curated by the renowned photo editor Jodi Peckman, Come Fly with Me is a love letter to the most longed-for escape, told through evocative images of the icons who've made the airport their runway. From John and Yoko waving from the airstairs to Rihanna bustling incognito through the halls, and from Muhammad Ali's crisp-pressed suits to Miley Cyrus's playful onesies, this is a whimsical and welcome reminder when we need it most of the joys of travel.

We live in an era when the unprecedented speed of change means: The only certainty is uncertainty; you can't predict what skills will be useful in ten years time; in most professions knowledge is doubling every two or three years; and no job is forever--so being employable means being flexible and retraining regularly. Accelerated Learning into the 21st Century contains a simple but proven plan that delivers the one key skill that every working person, every parent and student must master, and every teacher should teach: it's learning how to learn. The theory of eight multiple intelligences (linguistic, logical-mathematical, visual-spatial, kinesthetic, musical, interpersonal, intrapersonal, and naturalist) developed by Howard Gardner at Harvard University provides a foundation for the six-step MASTER-Mind system to facilitate learning (an acronym for Mind, Acquire, Search, Trigger, Exhibit, and Review), and is enhanced by the latest findings on the value of emotion and memory on the process of learning. Combined with motivational stories of success applying these principles, and putting forth a clear vision of how the United States can dramatically improve the education system to remain competitive in the next century, Accelerated

Learning into the 21st Century is a dynamic tool for self-improvement by individuals as diverse as schoolchildren and corporate executives.

Using a simple yet rigorous approach, Algebraic and Stochastic Coding Theory makes the subject of coding theory easy to understand for readers with a thorough knowledge of digital arithmetic, Boolean and modern algebra, and probability theory. It explains the underlying principles of coding theory and offers a clear, detailed description of each code. More advanced readers will appreciate its coverage of recent developments in coding theory and stochastic processes. After a brief review of coding history and Boolean algebra, the book introduces linear codes, including Hamming and Golay codes. It then examines codes based on the Galois field theory as well as their application in BCH and especially the Reed-Solomon codes that have been used for error correction of data transmissions in space missions. The major outlook in coding theory seems to be geared toward stochastic processes, and this book takes a bold step in this direction. As research focuses on error correction and recovery of erasures, the book discusses belief propagation and distributions. It examines the low-density parity-check and erasure codes that have opened up new approaches to improve wide-area network data transmission. It also describes modern codes, such as the Luby transform and Raptor codes, that are enabling new directions in high-speed

transmission of very large data to multiple users. This robust, self-contained text fully explains coding problems, illustrating them with more than 200 examples. Combining theory and computational techniques, it will appeal not only to students but also to industry professionals, researchers, and academics in areas such as coding theory and signal and image processing.

Rebellious, headstrong, independent - and on her own at age 15 - Lorelei dreamed of being a model, and made that happen through serendipity; a chance meeting with a '70s SoCal Rock Star opened the A-list Hollywood doors to a wondrous world, as well as a full-blown romance. Pounding the pavement in L.A. and New York taught her the hard knocks of being a working class model. Sheer will and determination jetted her off to Europe, where she became a top runway and magazine model, and where she met the doomed love of her life, fiancé Steve Clark of Def Leppard. With humor, pathos, and a world map of insight, *Runway RunAway* takes readers on a breathless journey around the globe with a backstage pass to high fashion, true romance, and Rock 'n Roll from some of the biggest names in the business.

Steel companies were at the birth of the modern business corporation. The first billion dollar corporation ever formed was U.S. Steel in 1901. By the mid-twentieth century the steel mill and the automobile plant were the two pillars upon which the twentieth century industrial economy rested. Given the scale of capital and operations, vertical integration was seen to be pivotal, from the raw materials of iron ore and coal on one end of the supply chain to the myriad of finished products on the other. By the end of the twentieth century, however, things had dramatically changed. Take a look inside for a brilliant and concise history of the steel industry. The author has put together a true presentation of the economics of the industry, with an overview of how the industry operates and the environment in which it operates. This book includes a detailed discussion of the regulation of the industry; a documentation of the reasons why a rejuvenated steel industry will be critical to the economic health of the United States and Canada; and a rationale for the reemergence of the steel industry in particular, and manufacturing in general, as a vital force in the North American economy of the new millennium. It was widely perceived that the United States was moving from an industrial age into an information age, driven by high technology. That process is now being reversed. The steel industry has continuously been forced to remake itself, and this book describes those developments and dynamics.
