Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this – one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners – there is a chapter on "Astronomy Basics" – and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer controlled "go to" model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable "go to"

telescopes.

The new device, HomePod, offers an easy and amazing way for Apple users to enjoy AirPlay, Apple Music, and control their HomeKit devices from anywhere. HomePod was not created to be a competitor to Google Home or Amazon Echo, just as the MacBook Air was not designed to compete against the netbook. Of course, they do share a number of characteristics. For instance, the HomePod smart speaker can be voice-controlled and the MacBook Air is compact and lightweight. However, HomePod is just a \$350 home assistant;

much like the MacBook was a \$200 laptop computer. The Fire Phone by Amazon was not much of a hit. Alexa, therefore, had to sell a lot so that Prime could stick into more people's lives. This was a success, thanks to the priced-to-move Echo. Google, on the other hand, made a brilliant decision to follow in the footsteps because it has to satisfy its insatiable data thirst. When it comes to HomePod, something was a little different. The AirPods was designed to help you enjoy your favorite music on the go while HomePod was designed to help you enjoy your favorite music in a convenient way in your home. AirPods lacked wires and sufficient surface area for traditional buttons. Because of this, the Siri voice control was the only way to interact with the gadget (you have to be

near the device). The Ultimate HomePod User Guide

Since the internet speeds went above  
the 500kbps mark, the number of things  
people can do with their interconnected  
devices skyrocketed. Automated homes,  
connected cars, and internet enabled

TVs. The latter is what threatens to  
revolutionize the entertainment world as  
we know it, do away with cable TV and  
abolish the need for expensive blue-ray  
players. Even though smart TVs are so  
lucrative, most people find them either  
too costly, or limiting. The alternative  
would be going for a TV with an HDMI  
port, a USB port and purchasing a dongle  
to bring in the power of internet TV.  
Chromecast is one of the best and  
cheapest such tools in the market.
