Acupuncture Business Success Book: The Ultimate Step-by-Step Guide for Building and Growing a Profitable Acupuncture Practice Churchill Livingstone This is the first book to set out a full range of research strategies for evaluating the clinical practice of acupuncture. Leading acupuncturists and researchers with international reputations share their expertise. They illustrate their descriptions with practical examples of what has worked and what has not. It outlines many of the key challenges in the

field. These challenges relate to the nature of acupuncture and the gap between current research evidence and the actual experiences of acupuncturists in the field. By focusing the chapters on key research questions, rather than methods, the book has a user-friendly feel. Each chapter is easily accessible with brief explanations of research designs as well as vignettes of relevant past research. The book is based on a deep understanding of acupuncture, with its inherent complexity in practice, whether based on traditional principles or more modern concepts. By incorporating a more sophisticated understanding of the field, this book details a range of strategies aiming to develop the evidence base with the utmost rigour. It is the first book on acupuncture research to take this unique view, integrating the very best of evidence-based medicine with a genuine sensitivity to the discipline of acupuncture, from its traditional and holistic roots to its more modern interpretations.

Statements of Fact in Traditional Chinese Medicine Paradigm Publications

The principles and practice of diagnostics are key to administering effective treatment in traditional Chinese medicine. The ability to recognise and diagnose symptoms and complaints correctly is fundamental to deciding on appropriate remedies, and this book provides a comprehensive introduction to all the principles that students and practitioners need to know. The authors outline the key methods used in diagnosis, and describe the eight basic categories of ailment and disease: yin and yang, exterior and interior, cold and heat, and deficiency and excess. They provide detailed instructions on how to identify and rebalance the relative strengths of pathogens and Qi in the body, and how to differentiate between syndromes that might look the same, using traditional Chinese medicine methods. The book concludes with useful forms for

completion in taking a diagnosis. Combining practical instruction with detailed theory, this authoritative textbook, compiled by the China Beijing International Acupuncture Training Center (CBIATC), under the editorial direction of leading Chinese clinicians Zhu Bing and Wang Hongcai, is an excellent reference for students and practitioners at all levels.

 Why can salamanders grow new legs, and young children grow new finger tips, but adult humans can't regenerate? What is the electricity that flows through the human body? Is it the same thing that the Chinese call Qi? If so, what does Chinese medicine know, that western medicine ignores? Dan Keown's highly accessible, witty, and original book shows how western medicine validates the theories of Chinese medicine, and how Chinese medicine explains the mysteries of the body that western medicine largely ignores. He explains the generative force of embryology, how the hearts of two people in love (or in scientific terms 'quantum entanglement') truly beat as one, how a cheating heart is also an ill heart (which is why men are twice as likely to die of a sudden heart attack with their mistress than with their wife), how neural crest cells determine our lifespan, and why Proust's madeleines evoked the memories they did. The book shows how the theories of western and Chinese medicine support each other, and how the integrated theory

enlarges our understanding of how bodies work on every level. Full of good stories and surprising details, Dan Keown's book is essential reading for anyone who has ever wanted to know how the body really works.

 Acupuncture Patterns & Practice is a practical, clinically oriented

exposition of traditional Chinese diagnosis and acupuncture therapy. The book consists of nine series of cases, each devoted to a type of disorder that is commonly seen in the acupuncture clinic: common cold, cough, dizziness, headache, lower back pain, painful obstruction (bi), wind-stroke, insomnia and palpitations. In each of the 40 illustrative case histories the authors provide a step-by-step method for applying the traditional Chinese diagnostic art of differentiation of patterns to these clinical problems. More than 80 charts graphically illustrate the material in the case histories, and each chapter concludes with a diagnostic master chart.
