**Budget Theory in the Public Sector** Wadsworth Publishing Company

Now in its 4th edition, *State and Local Public Finance* provides a comprehensive and sophisticated analysis of state and local government public finance practices and issues, using the basic tools of economics. For this new edition, there is a focus on the most important services provided in the state-local sector: education, health and welfare, public safety, and transportation. This textbook provides an examination and analysis of public finance practices and problems in a federal fiscal system, focusing on the fiscal behaviour and policies of state and local governments. The author presents detailed descriptions of significant institutions. Modern economic theory is applied to examine the way these institutions are used to produce and finance services, and to provide evaluation of alternative policies. Although the emphasis is on U.S. institutions and issues, much of the economic analysis can be applied to any federal system or to fiscal decentralization. This fully revised new edition sees updates throughout to data, topics, and applications. The Headlines and Applications sections reflect the most current policy issues affecting state and local governments. These include the effects of the Great Recession on state and local governments, changes in the tax treatment of internet purchases, the Affordable Care Act and implications for Medicaid spending by state governments, demographic changes and the implications for state-local finances, the implications of changes in automobile technology for transportation financing, and the potential for increased gambling

activity. This text will continue to be invaluable reading for those who study public finance, local government finance, urban economics and public policy and public administration.

*Credit and Financial Management* Oxford University Press  
*Financial Strategy for Public Managers* Oxford is a new generation textbook for financial management in the public sector. It offers a thorough, applied, and concise introduction to the essential financial concepts and analytical tools that today's effective public servants need to know. It starts "at the beginning" and assumes no prior knowledge or experience in financial management. Throughout the text, Kioko and Marlowe emphasize how financial information can and should inform every aspect of public sector strategy, from routine procurement decisions to budget preparation to program design to major new policy initiatives. They draw upon dozens of real-world examples, cases, and applied problems to bring that relationship between information and strategy to life. Unlike other public financial management texts, the authors also integrate foundational principles across the government, non-profit, and "hybrid/for-benefit" sectors. Coverage includes basic principles of accounting and financial reporting, preparing and analyzing financial statements, cost analysis, and the process and politics of budget preparation. The text also includes several large case studies appropriate for class discussion and/or graded assignments.

*Exchange-rate Management in Theory and Practice* Cengage Learning  
 FISCAL ADMINISTRATION is based on two principles: that students must clearly understand the details of where the money for public budgets comes from; and that, to learn public finance and budgeting, students must "run the numbers." John Mikesell—an authority on the revenue side of public finance—focuses on his area of specialty, giving students detailed instruction that will equip them to deal with the complex issues and calculations they will encounter in the field. In most chapters, Mikesell includes questions and exercises that require calculations to get specific answers, as well as "Cases for Discussion" and "Sidebars" that supplement the regular text with more in-depth treatment of key topics. This edition also includes the most recent federal budget information, as well as the latest federal government fiscal data.

Public administration is a craft that demands real-world application of concepts and theories often learned in a classroom. Yet many students find it difficult to make the leap from theory to practice completely unaided. The *Public Administration Workbook*, 8e is specifically designed with the theoretically-grounded, practice-minded student in mind. It reviews scholarship in political science, law, industrial psychology, and the sociology of organizations and then allows students to see how these intellectual fields inform the analytical and managerial tasks that comprise public administration. Where standard public administration textbooks examine the nature of public agencies and explain how bureaucracies relate to other institutions, this workbook promotes a more effective way of learning—by doing—and more directly prepares those who will pursue careers in public agencies. Each chapter begins with a discussion of relevant concepts and scholarship before moving into a hands-on exercise analyzing core analytical and management challenges. This edition includes an all-new exercise on contract negotiation, many international examples interwoven throughout the book, and a fully updated HRM section to reflect alternative ranking and compensation systems. Each chapter is further supported by a detailed Instructor's Manual written by the author to guide instructors on solutions, explanations, and ideas for using or modifying the exercises to fit a variety of course needs, as well as

downloadable datasets and exercises, providing students with a unique opportunity to apply and test classroom concepts outside of the job.

'The Road to Results: Designing and Conducting Effective Development Evaluations' presents concepts and procedures for evaluation in a development context. It provides procedures and examples on how to set up a monitoring and evaluation system, how to conduct participatory evaluations and do social mapping, and how to construct a "rigorous" quasi-experimental design to answer an impact question. The text begins with the context of development evaluation and how it arrived where it is today. It then discusses current issues driving development evaluation, such as the Millennium Development Goals and the move from simple project evaluations to the broader understandings of complex evaluations. The topics of implementing 'Results-based Measurement and Evaluation' and constructing a 'Theory of Change' are emphasized throughout the text. Next, the authors take the reader down 'the road to results,' presenting procedures for evaluating projects, programs, and policies by using a 'Design Matrix' to help map the process. This road includes: determining the overall approach, formulating questions, selecting designs, developing data collection instruments, choosing a sampling strategy, and planning data analysis for qualitative, quantitative, and mixed method evaluations. The book also includes discussions on conducting complex evaluations, how to manage evaluations, how to present results, and ethical behavior--including principles, standards, and guidelines. The final chapter discusses the future of development evaluation. This comprehensive text is an essential tool for those involved in development evaluation.

Over recent decades, decentralization has emerged as a key Public Sector Reform strategy in a wide variety of international contexts. Yet, despite its emergence as a ubiquitous activity that cuts across disciplinary lines in international development, decentralization is understood and applied in many different ways by parties acting from contrary perspectives. This book offers a fascinating insight into theory and practice surrounding decentralization activities in the Public Sectors of developing and transitional countries. In drawing on the expertise of established scholars, the book explores the contexts, achievements, progress and challenges of decentralization and local governance. Notably, the contributions contained in this book are genuinely international in nature; the chapters explore aspects of decentralization and local governance in contexts as diverse as Ghana, Hong Kong, India, Indonesia, Kazakhstan, Morocco, Tanzania, Uganda, and Viet Nam. In summary, by examining the subject of decentralization with reference to specific developing and transitional Public Sector contexts in which it has been practiced, this book offers an excellent contribution towards a better understanding of the theory and practice of decentralization and local governance in international settings. This book was published as a special double issue of the *International Journal of Public Administration*.
