Steel Design - Civil Engineering - The Constructor
 Structural engineering is a sub-

discipline of civil engineering in which structural engineers are trained to design the 'bones and muscles' that create the form and shape of man made structures. Structural engineers need to understand and calculate the stability, strength and rigidity of built structures for buildings and nonbuilding structures. The structural designs are integrated with those of other

designers such as architects and building services engineer and often supervise the construction. **Steel Structures - Civil Engineering - The Constructor** Steel structures is a very important subject for undergraduate civil engineers. Steel is an alloy of carbon and iron. It used in construction and other applications because of its Hardness and

tensile strength. Due to the tensile strength of steel, it is added in concrete otherwise concrete is very much powerful in compression. **Download Structural Steel Books - Civil Engineering Community** Download Steel Structures Books - We have compiled a list of Best & Standard Reference Books on Steel Structures Subject.
