Financial reports can be regarded as the primary means of communication between a company's management and its shareholders. The reports also address all other kinds of stakeholders like employees, suppliers, customers, competitors, governments, potential investors, bond holders and, in a broad sense, the entire society. Still, it is questionable whether managers really deliver true information in their reports. One possible way of obscuring corporate information when results are negative, or of being forthcoming in disclosing information when results are good, is to adjust the reports' readability which can influence understandability as a consequence. The concrete aim of this study is to focus on the readability of letters to the shareholders of bilingual (German and English) quarterly reports of listed companies at Frankfurt Stock Exchange. It is examined how various factors influence the readability of company reports.

A Global Perspective Cambridge University Press

The systematic approach to innovation development today is one of the world's most prominent scientific fields, and with good reason. When applied correctly, such system produces regular outcomes, which consistently drive lasting competitive advantage. Unfortunately, as much as it is beneficial, the orchestration of an undisturbed flow of multiple complex, dynamic, and flexible

innovation development processes is structurally demanding. In this book, a recognised innovation management specialist sets the record straight, offering a comprehensive approach to the improvement of innovation efficiency with the use of management control system. Unlike other books on the subject, it proposes original representation - the CDI model - of the relationships between management control system, decision-making quality, and innovation system efficiency and explains why management control is fundamental to innovation management. In addition to that, inside the reader will find several original developments. These include: the info-deficiency (I-D) model, depicting the various parameters hindering decision-making in innovation development; the product innovation development (PID) system, offering the original function-based approach to innovation management; and the composite innovation index - specially designed tool intended to evaluate the efficiency of an innovation development system. It will be of interest to researchers, academics, practitioners, and advanced students in the fields of management, strategy, and innovation.

First published in 1984, this book gives a historical account of the worldwide development of the theory and practice of inflation accounting (particularly as applied to the financial accounts of corporations). It is a comprehensive account, both in terms of the historical depth and the international breadth of its coverage. The account of the debate in Britain includes the results of original research by the authors, based on interviews and archive material. The book offers important insights not only into the present state and likely future course of the debate on inflation accounting but also into the whole process of setting financial accounting standards. The exposition is kept at a non-technical level wherever possible, but the reader should ideally have the degree of technical expertise which could be acquired by reading the companion volume, *Inflation Accounting: an introduction to the debate*, by Geoffrey Whittington.

Despite the impact senior managers can have on organisations, surprisingly little is known about what makes them effective. This distinctive book is structured around the findings of the authors' eight year research programme into senior executive effectiveness. In all eleven Capabilities have been identified which cover how executives cope personally with their role, how they lead and influence others and build competitive organisations. Each Capability is used as a starting point to review the latest management thinking and practice as it applies to senior executives.

This volume showcases selected conference papers addressing the sustainable future of ASEAN from the perspectives of business and social science disciplines. In addressing the 17 Sustainable Development Goals (SDGs) envisioned by the United Nations in the domains of environment, health and well-being, posing potential means of reducing inequalities globally, the authors target specific issues and challenges confronting the fast-growing region of ASEAN and present suggestions for co-operation and commitment from governments, non-governmental organisations (NGOs) and society at large, in line with the ASEAN Vision 2020. Papers are selected from the 3rd International Conference on the Future of ASEAN (ICoFA) 2019, organised by Universiti Teknologi MARA in Malaysia, whose conference theme "Charting the Sustainable Future of ASEAN" enables intellectual discourse on sustainability issues from business and the social sciences, as well as science and technology. The selection of papers is published in two volumes, comprising scholarly and practical insights into sustainability in ASEAN. This first volume of papers from business and social science scholars will be of interest to researchers and policymakers interested in sustainability developments in the ASEAN region.

The Accountant Harriman House Limited

Business success or failure is often determined by decisions made in establishing selling prices for products and services. . . . In this clear and readable work, the authors present a good summary of the literature on pricing policy, emphasizing the relevance of costs. They propose a system that involves analyzing indirect costs to distinguish those that may be relevant to pricing in some circumstances but not others. This 'analytical contribution accounting' has promise as a tool for many businesses. Students writing papers on costs and pricing policy would find this volume a useful starting point. The bibliography is good. . . . College and university collections. Using practical examples and simple language, this book develops an accounting system that is a new and functional key to making product pricing decisions. This accounting system, which bridges the gap between full and direct costing, is called Analytical Contribution Accounting. Georges and McGee demonstrate practically as well as theoretically why it is so superior for pricing purposes. The system

is based on the relativity aspects implicit in the direct cost method, and on the calculations of a set of differentiated contributions.

The Debate on Inflation Accounting CRC Press

Our extraordinary capacity to reason and solve problems sets us aside from other animals, but our evolved thinking processes also leave us susceptible to bias and error. The study of thinking and reasoning goes back to Aristotle, and was one of the first topics to be studied when psychology separated from philosophy. In this Very Short Introduction Jonathan Evans explores cognitive psychological approaches to understanding the nature of thinking and reasoning, problem solving, and decision making. He shows how our problem solving capabilities are hugely dependent on also having the imagination to ask the right questions, and the ability to see things from a completely new perspective. Beginning by considering the approaches of the behaviourists and the Gestalt psychologists, he moves on to modern explorations of thinking, including hypothetical thinking, conditionals, deduction, rationality, and intuition. Covering the role of past learning, IQ, and cognitive biases, Evans also discusses the idea that there may be two different ways of thinking, arising from our evolutionary history. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

This book describes how auditors exercise different levels of professional skepticism and how they

are exposed to different types of affective information on clients' behavior. Based on the author's empirical study of 56 auditors, it shows that auditors' skepticism and affective reactions towards a client interact to influence their appraisal of valuation problems. It also suggests that the effects of auditors' affective reactions on their skeptical judgments depend on the level of risk in the audit engagement.
