A high quality environment is coming to be regarded as a necessary prerequisite for the enjoyment of some of the most fundamental human rights, including the rights to life and health. However, the precise recognition of a 'right to environment' has not yet been settled. The essays collected here address this and related questions from different perspectives.

Brian Leiter is widely recognized as the leading philosophical interpreter of the jurisprudence of American Legal Realism, as well as the most influential proponent of the relevance of the naturalistic turn in philosophy to the problems of legal philosophy. This volume collects newly revised versions of ten of his best-known essays, which set out his reinterpretation of the Legal Realists as prescient philosophical naturalists; critically engage with jurisprudential responses to Legal Realism, from legal positivism to Critical Legal Studies; connect the Realist program to the methodology debate in contemporary jurisprudence; and explore the general implications of a naturalistic world view for problems about the objectivity of law and morality. Leiter has supplied a lengthy new introductory essay, as well as postscripts to several of the essays, in which he responds to challenges to his interpretive and philosophical

claims by academic lawyers and philosophers. This volume will be essential reading for anyone interested in jurisprudence, as well as for philosophers concerned with the consequences of naturalism in moral and legal philosophy.

This was Pufendorf's first work, published in 1660. Its appearance effectively inaugurated the modern natural-law movement in the German-speaking world. The work also established Pufendorf as a key figure and laid the foundations for his major works, which were to sweep across Europe and North America. Pufendorf rejected the concept of natural rights as liberties and the suggestion that political government is justified by its protection of such rights, arguing instead for a principled limit to the state's role in human life.

This volume gathers leading figures from legal philosophy and constitutional theory to offer a critical examination of the work of Robert Alexy. The contributions explore the issues surrounding the complex relations between rights, law, and morality and reflect on Alexy's distinctive work on these issues. The focus across the contributions is on Alexy's main pre-occupations - his anti-positivist views on the nature of law, his approach to the

nature of legal reasoning, and his understanding of constitutional rights as legal principles. In an extended response to the contributions in the volume, Alexy develops his views on these central issues. The volume's juxtaposition of Anglo-American and German perspectives brings into focus the differences as well as the prospect of cross-fertilization between Continental and Anglo-American work in jurisprudence.

The supranational law of the European Union represents a uniquely powerful, far-reaching, and controversial instance of the growth of international legal governance, one that has forever altered the political and legal landscape of its Member States. The EU has attracted significant attention from political scientists, economists, and lawyers who have analysed its polity and constructed theoretical models of the integration process. Yet it has been almost entirely neglected by analytic philosophers, and the philosophical tools that have been developed to analyse and evaluate the Union are still in their infancy. This book brings together legal philosophers, political philosophers, and EU legal academics in the service of developing the philosophical analysis of EU law. In a series of original and complementary essays they bring their varied disciplinary expertise and theoretical perspectives to bear on central issues facing the Union and its law. Combining both abstract thought in legal and political philosophy and more tangible theoretical work on specific legal issues, the essays in this volume make a significant contribution to developing work on the philosophical foundations of EU law, and will engender further debate between philosophers, political

philosophers, and EU legal academics. They will be of interest to all those engaged in understanding the nature and purpose of this unique legal entity.

For many years, Antony Duff has been one of the world's foremost philosophers of criminal law. This volume collects essays by leading criminal law theorists to explore the principal themes in his work. In a response to the essays, Duff clarifies and develops his position on central problems in criminal law theory. Some of the essays concentrate on the topic of criminalization. That is, they examine what forms of conduct (including attempts, offensiveness, and negligence) can aptly qualify as criminal offences, and what principled limits, if any, should be placed on the reach of the criminal law. Several of the other essays assess the thesis that punishment is justifiable as a form of communication between offenders and their community. Those essays examine the presuppositions (about the nature and function of community, and about the moral structure of atonement) that must be embraced if communication is to be a primary role for punishment. The remaining essays examine the nature and limits of responsibility in the law, as they engage with philosophical debates over 'moral luck' by investigating the ways

in which the law can legitimately hold people responsible for events that were not within their control. These chapters tie the first and third parts of the book together, as they explore the relationship between the principles that determine a person's responsibility and the principles that determine which types of actions can appropriately be criminalized. Finally, Duff responds with comments that seek to defend and clarify his views while also acknowledging the correctness of some of the critics' objections.

This book explains how telemedicine can offer solutions capable of improving the care and survival rates of cancer patients and can also help patients to live a normal life in spite of their condition. Different fields of application - community, hospital and home based - are examined, and detailed attention is paid to the use of tele-oncology in rural/extreme rural settings and in developing countries. The impact of new technologies and the opportunities afforded by the social web are both discussed. The concluding chapters consider eLearning in relation to cancer care and assess the scope for education to improve prevention. No medical condition can shatter people's lives as cancer does today and the need to develop strategies to reduce the disease burden and improve quality of life is paramount. Readers will find this new volume in Springer's TELe Health series to be a rich source of information on the important contribution that can be made by telemedicine in achieving these goals.
