 The second edition of the definitive reference on contact studies and linguistic change—provides extensive new research and original case studies Language contact is a dynamic area of contemporary linguistic research that studies how language changes when speakers of different languages interact. Accessibly structured into three sections, *The Handbook of Language Contact* explores the role of contact studies within the field of linguistics, the value of contact studies for language change research, and the relevance of language contact for sociolinguistics. This authoritative volume presents original findings and fresh research directions from an international team of prominent experts. Thirty-seven specially-commissioned chapters cover a broad range of topics and case studies of contact from around the world. Now in its second edition, this valuable reference has been extensively updated with new chapters on topics including globalization,

language acquisition, creolization, code-switching, and genetic classification. Fresh case studies examine Romance, Indo-European, African, Mayan, and many other languages in both the past and the present. Addressing the major issues in the field of language contact studies, this volume: Includes a representative sample of individual studies which re-evaluate the role of language contact in the broader context of language and society Offers 23 new chapters written by leading scholars Examines language contact in different societies, including many in Africa and Asia Provides a cross-section of case studies drawing on languages across the world *The Handbook of Language Contact, Second Edition* is an indispensable resource for researchers, scholars, and students involved in language contact, language variation and change, sociolinguistics, bilingualism, and language theory.

Studies on Agreement John Benjamins Publishing

This introductory course text explores the genealogy of the field of conflict resolution by examining three different epochs of the field, each one tied to the historical context and events of the day. *Creoles, Their Substrates, and Language Typology* John Benjamins Publishing
 One teenager in a skirt. One teenager with a lighter. One moment that changes both of their lives forever. If it weren't for the 57 bus, Sasha and Richard never would have met. Both were high

school students from Oakland, California, one of the most diverse cities in the country, but they inhabited different worlds. Sasha, a white teen, lived in the middle-class foothills and attended a small private school. Richard, a black teen, lived in the crime-plagued flatlands and attended a large public one. Each day, their paths overlapped for a mere eight minutes. But one afternoon on the bus ride home from school, a single reckless act left Sasha severely burned, and Richard charged with two hate crimes and facing life imprisonment. The 57 Bus is Dashka Slater's true account of the case that garnered international attention and thrust both teenagers into the spotlight.

An Introduction John Benjamins Publishing

Destined to become a landmark work, this book is devoted principally to a reassessment of the content, categories, boundaries, and basic assumptions of pidgin and creole studies. It includes revised and elaborated papers from meetings of the Society for Pidgin and Creole Linguistics in addition to commissioned papers from leading scholars in the field. As a group, the papers undertake this reassessment through a reevaluation of pidgin/creole terminology and contact language typology (Section One); a questioning of process and evolution in pidginization, creolization, and other language contact phenomena (Section Two); a reinterpretation of the

sources and genesis of grammatical aspects of Saramaccan and Atlantic creoles in general (Section Three); a reconsideration of the status of languages defying received definitions of pidgins and creoles (Section Four); and analyses of aspects of grammar that shed light on the issue of what a possible creole grammar is (Section Five).

The status of agreement is a core issue in current morphological and syntactic theory. The collection of papers in this volume focuses on important issues, such as the nature of the relation between syntax and morphology in determining agreement relations; whether and which syntactic configurations are relevant for determining agreement; the relevance of verbal agreement for the purposes of EPP; the inquiry into the existence of connections between verbal and DP-internal agreement; on the morphological and syntactic distinction of person, number and gender agreement; how and why AGREE and Spec, head relations trigger different agreement effects; and the type of relation that exists between head-movement and morphological agreement. The data collected come from a wide variety of languages and the studies presented discuss innovative and thought-provoking ideas for dealing with agreement phenomena

Agreement in Natural Language The Open University

Research on second language acquisition (SLA) has identified language aptitude and age of onset (AO), i.e., the age at which learners are first meaningfully exposed to the L2, as robust predictors of rate of classroom language learning and level of ultimate L2 attainment in naturalistic settings, respectively. It is not surprising, therefore, that recent years have witnessed a surge of interest in the combination of age and aptitude as a powerful explanatory factor in SLA, and central to a viable SLA theory. The chapters in this volume provide new studies and reviews of research findings on age effects, bilingualism effects, maturational constraints and sensitive periods in SLA, the sub-components of language aptitude and the development of new aptitude measures, the influence of AO and aptitude in combination on SLA, aptitude-treatment interactions, and the implications of the research findings for language education policy and tailored language instruction.

Concise Encyclopedia of Pragmatics, Second Edition (COPE) is an authoritative single-volume reference resource comprehensively describing the discipline of pragmatics, an important branch of natural language study dealing with the study of language in its entire user-related theoretical and practical complexity. As a derivative volume from *Encyclopedia of Language and Linguistics, Second Edition*, it comprises contributions from the foremost scholars of semantics in their various specializations and draws on 20+ years of development in the parent work in a compact and affordable format. Principally intended for tertiary level inquiry and research, this will be invaluable as a reference work for undergraduate and postgraduate students as well as academics inquiring into the study of meaning and meaning relations within languages. As pragmatics is a centrally important and inherently cross-cutting area within linguistics, it will therefore be relevant not just for meaning specialists, but for most linguistic audiences. Edited by Jacob Mey, a leading pragmatics specialist, and authored by experts The latest trends in the field authoritatively reviewed and interpreted in context of related disciplines Drawn from the richest, most authoritative, comprehensive and internationally acclaimed reference resource in the linguistics area Compact and affordable single volume reference format

Tavistock Press was established as a co-operative venture between the Tavistock Institute and Routledge & Kegan Paul (RKP) in the 1950s to produce a series of major contributions across the social sciences. This volume is part of a 2001 reissue of a selection of those important works which have since gone out of print, or are difficult to locate. Published by Routledge, 112 volumes in total are being brought together under the name The International Behavioural and Social Sciences

Library: Classics from the Tavistock Press. Reproduced here in facsimile, this volume was originally published in 1967 and is available individually. The collection is also available in a number of themed mini-sets of between 5 and 13 volumes, or as a complete collection.

This collection of selected conference papers from three SPCL meetings brings together a cross-fertilization of approaches to the study of contact languages. The articles are grouped into three coherent sections dealing with, respectively, phonetics and phonology, including Optimality Theory; synchronic analyses of both morphology and syntax; and diachronic tracings of language change, with special focus on sound patterns as well as semantics. An added value of the volume is that most of the articles are in various ways significant for more than one linguistic subgrouping, and there is a significant overlap of interests; the sections also cover sociolinguistic subjects, give both theoretical and functional linguistic analyses of language data, and discuss issues of grammaticalization. Thus, in discussing a number of issues relevant far beyond the study of pidgin and creole languages, as well as providing a wealth of linguistic data, this volume also contributes to the broader field of linguistics in general.

Drawing on more than three hundred Hebrew roots, the author shows that Jewish thought employs Hebrew concepts and categories that are altogether distinct from those that characterize the Western speculative tradition. Among the key categories that shape Jewish thought are holiness, divinity, humanity, prayer, responsibility, exile, dwelling, gratitude, and language itself. While the Hebrew language is central to the investigation, the reader need not have a knowledge of Hebrew in order to follow it. Essential reading for students and scholars of Judaism, this book will also be of value to anyone interested in the categories of thinking that form humanity's ultimate concerns.

Since creole languages draw their properties from both their substrate and superstrate sources, the typological classification of creoles has long been a major issue for creolists, typologists, and linguists in general. Several contradictory proposals have been put forward in the literature. For example, creole languages typologically pair with their superstrate languages (Chaudenson 2003), with their substrate languages (Lefebvre 1998), or even, creole languages are alike (Bickerton 1984) such that they constitute a definable typological class (McWhorter 1998). This book contains 25 chapters bearing on detailed comparisons of some 30 creoles and their substrate languages. As the substrate languages of these creoles are typologically different, the detailed investigation of substrate features in the creoles leads to a particular answer to the question of how creoles should be classified typologically. The bulk of the data show that creoles reproduce the typological features of their substrate languages. This argues that creoles cannot be claimed to constitute a definable typological class."

The present volume includes papers that were presented at the conference Languages in Contact at the University of Groningen (25-26 November 1999). The conference was held to celebrate the University of St. Petersburg's award of an honorary doctorate to Tjeerd de Graaf of Groningen. In general, the issues discussed in the articles involve pidgins and creoles, minorities and their languages, Diaspora situations, Sprachbund phenomena, extralinguistic correlates of variety in contact situations, problems of endangered languages and the typology of these languages. Special attention is paid to contact phenomena between languages of the Russian Empire / USSR / Russian Federation, their survival and the influence of Russian.

Children are extremely gifted in acquiring their native languages, but languages nevertheless change over time. Why does this paradox exist? In this study of creole languages, Enoch Aboh addresses this question, arguing that language acquisition requires contact between different linguistic sub-systems that feed into the hybrid grammars that learners develop. There is no qualitative difference between a child learning their language in a multilingual environment and a child raised in a monolingual environment. In both situations, children learn to master multiple linguistic sub-systems that are in contact and may be combined to produce new variants. These new variants are part of the inputs for subsequent learners. Contributing to the debate on language acquisition and change, Aboh shows that language learning is always imperfect: learners' motivation is not to replicate the target language faithfully but to develop a system close enough to the target that guarantees successful communication and group membership.

The Faber Book of Beasts is a collection of many of the best poems in English about the creatures who share our planet. The animal kingdom has prompted some of the liveliest and most enjoyable writing by poets, from Homer to our contemporaries. Among the creatures gathered here, tame or wild; common or exotic, are mammals, reptiles, birds, insects, and others perhaps more fanciful than real. A zoologist's delight. There is, too, a moral or philosophical purpose. As Paul Muldoon says in his introduction: 'We are most human in the presence of animals.' And it is just this sense of how our humanity is illuminated by the contemplation of bestial life that he has set out to celebrate. The results are wonderfully rich and thought-provoking.

What do all human languages have in common and in what ways are they different? How can language be used to trace different peoples and their past? Are certain languages similar because of common descent or language contact? Assuming no prior knowledge of linguistics, this textbook introduces readers to the rich diversity of human languages, familiarizing students with the variety and typology of languages around the world. Linguistic terms and concepts are explained, in the text and in the glossary, and illustrated with simple, accessible examples. Eighteen language maps and numerous language family charts enable students to place a language geographically or genealogically. A supporting website includes additional language maps and sound recordings that can be used to illustrate the peculiarities of the sound systems of various languages. 'Test yourself' questions throughout the book make it easier for students to analyze data from unfamiliar languages.

This volume presents a collection of new articles by sixteen specialists in the field of pidgin and creole studies, assembled in honor of the world-renowned creolist, Albert Valdman. The articles, written from a variety of theoretical perspectives, are organized thematically in three sections: on the history of specific pidgins or creoles (including Louisiana Creole and Haitian Creole); on the sociohistorical settings that gave rise to these contact languages and issues affecting their future development; and on issues of linguistic variation and change. In keeping with Valdman's own primary interests, the French-based creoles receive the most attention, including both those of the Atlantic zone and those of the Indian Ocean, but the volume also presents significant scholarship on English- and Portuguese-based varieties.
