As the public increasingly questioned the war in Vietnam, a group of American scientists deeply concerned about the use of Agent Orange and other herbicides started a movement to ban what they called “ecocide.” David Zierler traces this movement, starting in the 1940s, when weed killer was developed in agricultural circles and theories of counterinsurgency were

studied by the military. These two trajectories converged in 1961 with Operation Ranch Hand, the joint U.S.-South Vietnamese mission to use herbicidal warfare as a means to defoliate large areas of enemy territory. Driven by the idea that humans were altering the world's ecology for the worse, a group of scientists relentlessly challenged Pentagon assurances of safety, citing possible long-term environmental and health effects. It wasn't until 1970 that the scientists

gained access to sprayed zones confirming that a major ecological disaster had occurred. Their findings convinced the U.S. government to renounce first use of herbicides in future wars and, Zierler argues, fundamentally reoriented thinking about warfare and environmental security in the next forty years. Incorporating in-depth interviews, unique archival collections, and recently declassified national security documents, Zierler examines the movement

to ban ecocide as it played out amid the rise of a global environmental consciousness and growing disillusionment with the containment policies of the cold war era.

Classic Books Library presents this brand new edition of “The Federalist Papers”, a collection of separate essays and articles compiled in 1788 by Alexander Hamilton. Following the United States Declaration of Independence in 1776, the governing doctrines and policies of the States lacked cohesion. “The Federalist”, as it was previously known, was constructed by American statesman Alexander

Hamilton, and was intended to catalyse the ratification of the United States Constitution. Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755–1804) was an American lawyer, journalist and highly influential government official. He also served as a Senior Officer in the Army between 1799-1800

and founded the Federalist Party, the system that governed the nation's finances. His contributions to the Constitution and leadership made a significant and lasting impact on the early development of the nation of the United States. In Learning to Love the Bomb, Sean M. Maloney explores the controversial subject of Canada's

acquisition of nuclear weapons during the Cold War. Based on newly declassified Canadian and U.S. documents, it examines policy, strategy, operational, and technical matters and weaves these seemingly disparate elements into a compelling story that finally unlocks several Cold War mysteries. For example, while U.S. military forces during the 1962 Cuban Missile Crisis were focused on the Caribbean Sea and the southeastern United States, Canadian forces

assumed responsibility for defending the northern United States, with aircraft armed with nuclear depth charges flying patrols and guarding against missile attack by Soviet submarines. This defensive strategy was a closely guarded secret because it conflicted with Canada's image as a peacekeeper and therefore a more passive member of NATO than its ally to the south. It is revealed here for the first time. The place of nuclear weapons in Canadian

history has, until now, been a highly secret and misunderstood field subject to rumor, rhetoric, half-truths, and propaganda. Learning to Love the Bomb reveals the truth about Canada's role as a nuclear power.
