Principles of Financial Accounting SAGE

This title, first published in 1972, examines five countries that have experience with programs designed to improve the quality of financial reporting. Zeff devotes separate chapters to the historical evolution of the program, and then goes on to compare and analyse the various trends. This book presents an important piece of research to those concerned with the development of accounting principles.

Needles/Powers/Crosson PRINCIPLES OF ACCOUNTING is continuously evolving to meet the needs of today's learner. This edition's new structure is based on research with students about the best way to deliver content in this course! The chapters in Needles/Powers/Crosson have been organized into the Three Section Approach, which helps you more easily digest the content. The first section is Concepts and focuses on the overarching

accounting concepts that require consistent reiteration throughout the course. With a clear understanding of the concepts, you are then ready to experience the second section--Accounting Applications. Here you practice the application of accounting procedures with features like Apply It and a new transaction analysis model, which clearly illustrates how transactions are the result of business decisions and recorded in a way to show their effects on the financial statements. Finally, you utilize section three, Business Applications. This section illustrates how the concepts and procedures are used to make business decisions. Real company examples are used throughout the chapter to show students the relevance of the material. This logical progression through the material is further supported in the online environment in CengageNOW with the Tri-Level Problem. This problem mirrors the Three Section Approach and connects the sections to facilitate a more complete understanding. These substantial changes will make you a more efficient learner and are designed to prepare you for a business world increasingly complicated by ethical issues, globalization. The Demo Docs System of instruction replicates the classroom experience by providing more "I get it" moments outside of class. We've talked to tons

of POA instructors and our editors have even taken the accounting course (numerous times!) to figure out the following issue in this course that is consistent: Students understand (or “get it”) right after you do a problem in class, but as soon as they leave class, with each passing hour, their ability to do the problems again and complete their homework diminishes to the point of them either having to come to office hours to get help, or they just quit and get behind in the course. On top of this, you can end up getting behind in the course as well, in order to keep everyone on track. The Demo Docs system helps to recreate the “I get it” moments outside of class-keeping both you and the students on track.
