"The bestselling author of *Bowling Alone* offers [an] ... examination of the American Dream in crisis--how and why opportunities for upward mobility are diminishing, jeopardizing the prospects of an ever larger segment of Americans"-

The Idea of Europe NYU Press

Widely used as a primer, a text and a provocation to critical thinking, 'Studying Religion' aims to develop students' skills. The book clearly explains the methods and theories employed in the study of religion. Essays are offered on a range of topics: from the history and functions of religion to public discourse on religion and the classification of religions. The works of key scholars - from Karl Marx, Ludwig Wittgenstein and Rudolf Otto to Mircea Eliade, James G. Frazer, and Sigmund Freud - are analysed and explored. 'Studying Religion' represents a shift away from the traditional focus of describing the exotic or curious religious 'Other' to an examination of how religious behaviours and institutions are studied. The book will be invaluable to students of religious studies.

The book that launched environmental history, William Cronon's *Changes in the Land*, now revised and updated. Winner of the Francis Parkman Prize In this landmark work of environmental history, William Cronon offers an original and profound explanation of the effects European colonists' sense of property and their pursuit of capitalism had upon the ecosystems of New England.

Reissued here with an updated afterword by the author and a new preface by the distinguished colonialist John Demos, *Changes in the Land*, provides a brilliant inter-disciplinary interpretation of how land and people influence one another. With its chilling closing line, "The people of plenty were a people of waste," Cronon's enduring and thought-provoking book is ethno-ecological history at its best.

Natural Experiments of History

Harper Collins

The Handbook of Computational Social Science is a comprehensive reference source for scholars across multiple disciplines. It outlines key debates in the field, showcasing novel statistical modeling and machine learning methods, and draws from specific case studies to demonstrate the opportunities and challenges in CSS approaches. The Handbook is divided into two volumes written by outstanding, internationally renowned scholars in the field. This second volume focuses on foundations and advances in data science, statistical modeling, and machine learning. It covers a range of key issues, including the management of big data in terms of record linkage, streaming, and missing data. Machine learning, agent-based and statistical modeling, as well as data quality in relation to digital trace and textual data, as well as probability, non-probability, and crowdsourced samples represent further foci. The volume not only makes major contributions to the consolidation of this growing research field, but also encourages growth into new directions. With its broad coverage of perspectives (theoretical, methodological, computational), international scope, and interdisciplinary approach, this important resource is integral reading for advanced

undergraduates, postgraduates, and researchers engaging with computational methods across the social sciences, as well as those within the scientific and engineering sectors.

Teaching What Really Happened

Bloomsbury Publishing USA

This new edition brings this study of inner-city life up to date.

Hoot Knopf Books for Young Readers

"Should be in the hands of every history teacher in the country."— Howard Zinn
James Loewen has revised *Teaching What Really Happened*, the bestselling, go-to resource for social studies and history teachers wishing to break away from standard textbook retellings of the past. In addition to updating the scholarship and anecdotes throughout, the second edition features a timely new chapter entitled "Truth" that addresses how traditional and social media can distort current events and the historical record. Helping students understand what really happened in the past will empower them to use history as a tool to argue for better policies in the present. Our society needs engaged citizens now more than ever, and this book offers teachers concrete ideas for getting students excited about history while also teaching them to read critically. It will specifically help teachers and students tackle important content areas, including Eurocentrism, the American Indian experience, and slavery. **Book Features:** An up-to-date assessment of the potential and pitfalls of U.S. and world history education. Information to help teachers expect, and get, good performance from students of all racial, ethnic, and socioeconomic backgrounds. Strategies for incorporating project-oriented self-learning, having students conduct online historical research, and teaching historiography. Ideas from

teachers across the country who are empowering students by teaching what really happened. Specific chapters dedicated to five content topics usually taught poorly in today's schools.

A Discourse Concerning Western

Planting University of Ottawa Press

A history of slavery in New York City is told through contributions by leading historians of African-American life in New York and is published to coincide with a major exhibit, in an anthology that demonstrates how slavery shaped the city's everyday experiences and directly impacted its rise to a commercial and financial power. Original. 10,000 first printing.

This Newbery Honor winner and #1 New York Times bestseller is a beloved modern classic. *Hoot* features a new kid and his new bully, alligators, some burrowing owls, a renegade eco-avenger, and several extremely poisonous snakes. Everybody loves Mother Paula's pancakes. Everybody, that is, except the colony of cute but endangered owls that live on the building site of the new restaurant. Can the awkward new kid and his feral friend prank the pancake people out of town? Or is the owls' fate cemented in pancake batter? Welcome to Carl Hiaasen's Florida—where the creatures are wild and the people are wilder!

Founding Brothers Routledge

The National Book Award winning history of how racist ideas were created, spread,

and deeply rooted in American society. Some Americans insist that we're living in a post-racial society. But racist thought is not just alive and well in America -- it is more sophisticated and more insidious than ever. And as award-winning historian Ibram X. Kendi argues, racist ideas have a long and lingering history, one in which nearly every great American thinker is complicit. In this deeply researched and fast-moving narrative, Kendi chronicles the entire story of anti-black racist ideas and their staggering power over the course of American history. He uses the life stories of five major American intellectuals to drive this history: Puritan minister Cotton Mather, Thomas Jefferson, abolitionist William Lloyd Garrison, W.E.B. Du Bois, and legendary activist Angela Davis. As Kendi shows, racist ideas did not arise from ignorance or hatred. They were created to justify and rationalize deeply entrenched discriminatory policies and the nation's racial inequities. In shedding light on this history, *Stamped from the Beginning* offers us the tools we need to expose racist thinking. In the process, he gives us reason to hope.

Our Kids Cambridge University Press
The forgotten stories of America maroons—wilderness settlers evading discovery after escaping slavery Over more than two centuries men, women, and children escaped from slavery to make the Southern wilderness their home. They hid in the mountains of Virginia and the low swamps of South Carolina; they stayed in the neighborhood or paddled their way to secluded places; they buried themselves underground or built comfortable settlements. Known as maroons, they lived on their own or set up communities in swamps or other areas where they were not likely to be discovered.

Although well-known, feared, celebrated or demonized at the time, the maroons whose stories are the subject of this book have been forgotten, overlooked by academic research that has focused on the Caribbean and Latin America. Who the American maroons were, what led them to choose this way of life over alternatives, what forms of marronage they created, what their individual and collective lives were like, how they organized themselves to survive, and how their particular story fits into the larger narrative of slave resistance are questions that this book seeks to answer. To survive, the American maroons reinvented themselves, defied slave society, enforced their own definition of freedom and dared create their own alternative to what the country had delineated as being black men and women's proper place. Audacious, self-confident, autonomous, sometimes self-sufficient, always self-governing; their very existence was a repudiation of the basic tenets of slavery.

Some central questions in the natural and social sciences can't be answered by controlled laboratory experiments, often considered to be the hallmark of the scientific method. This impossibility holds for any science concerned with the past. In addition, many manipulative experiments, while possible, would be considered immoral or illegal. One has to devise other methods of observing, describing, and explaining the world. In the historical disciplines, a fruitful approach has been to use natural experiments or the comparative method. This book consists of eight comparative studies drawn from history, archeology, economics, economic history,

geography, and political science. The studies cover a spectrum of approaches, ranging from a non-quantitative narrative style in the early chapters to quantitative statistical analyses in the later chapters. The studies range from a simple two-way comparison of Haiti and the Dominican Republic, which share the island of Hispaniola, to comparisons of 81 Pacific islands and 233 areas of India. The societies discussed are contemporary ones, literate societies of recent centuries, and non-literate past societies. Geographically, they include the United States, Mexico, Brazil, western Europe, tropical Africa, India, Siberia, Australia, New Zealand, and other Pacific islands. In an Afterword, the editors discuss how to cope with methodological problems common to these and other natural experiments of history.

Food Heritage and Nationalism in Europe contends that food is a fundamental element of heritage, and a particularly important one in times of crisis. Arguing that food, taste, cuisine and gastronomy are crucial markers of identity that are inherently connected to constructions of place, tradition and the past, the book demonstrates how they play a role in intangible, as well as tangible, heritage. Featuring contributions from experts working across Europe and beyond, and adopting a strong historical and transnational perspective, the book examines the various ways in which food can be understood and used as heritage. Including explorations of imperial spaces, migrations and diasporas; the role of commercialisation processes, and institutional practices within political and cultural domains, this volume considers all aspects of this complex issue. Arguing

that the various European cuisines are the result of exchanges, hybridities and complex historical processes, Porciani and the chapter authors offer up a new way of deconstructing banal nationalism and of moving away from the idea of static identities. Suggesting a new and different approach to the idea of so-called national cuisines, Food Heritage and Nationalism in Europe will be a compelling read for academic audiences in museum and heritage studies, cultural and food studies, anthropology and history. Much of human experience can be distilled to saltwater: tears, sweat, and an enduring connection to the sea. In *Vast Expanses*, Helen M. Rozwadowski weaves a cultural, environmental, and geopolitical history of that relationship, a journey of tides and titanic forces reaching around the globe and across geological and evolutionary time. Our ancient connections with the sea have developed and multiplied through industrialization and globalization, a trajectory that runs counter to Western depictions of the ocean as a place remote from and immune to human influence. Rozwadowski argues that knowledge about the oceans—created through work and play, scientific investigation, and also through human ambitions for profiting from the sea—has played a central role in defining our relationship with this vast, trackless, and opaque place. It has helped us to exploit marine resources, control ocean space, extend imperial or national power, and attempt to refashion the sea into a more tractable arena for human activity. But while deepening knowledge of the ocean has animated and strengthened connections between people and the world's seas, to understand this history we must address questions of how, by whom, and why knowledge of the ocean was created and used—and how we create and use this knowledge today. Only then can we can forge a healthier relationship with our future sea.

James McPherson has emerged as one of America's finest historians. *Battle Cry of Freedom*, his Pulitzer Prize-winning account of the Civil War, was a national bestseller that Hugh Brogan, in *The New York Times Book Review*, called "history writing of the highest order." In that

volume, McPherson gathered in the broad sweep of events, the political, social, and cultural forces at work during the Civil War era. Now, in *Abraham Lincoln and the Second American Revolution*, he offers a series of thoughtful and engaging essays on aspects of Lincoln and the war that have rarely been discussed in depth.

McPherson again displays his keen insight and sterling prose as he examines several critical themes in American history. He looks closely at the President's role as Commander-in-Chief of the Union forces, showing how Lincoln forged a national military strategy for victory. He explores the importance of Lincoln's great rhetorical skills, uncovering how--through parables and figurative language--he was uniquely able to communicate both the purpose of the war and a new meaning of liberty to the people of the North. In another section, McPherson examines the Civil War as a Second American Revolution, describing how the Republican Congress elected in 1860 passed an astonishing blitz of new laws (rivaling the first hundred days of the New Deal), and how the war not only destroyed the social structure of the old South, but radically altered the balance of power in America, ending 70 years of Southern power in the national government. The Civil War was the single most transforming and defining experience in American history, and Abraham Lincoln remains the most important figure in the pantheon of our mythology. These graceful essays, written by one of America's leading historians, offer fresh and unusual perspectives on both.

“Professor Zinn writes with an enthusiasm rarely encountered in the leaden prose of academic history....[His] chapter on Vietnam—bringing to life once again the fire-free zones, secret bombings, massacres, and cover-ups—should be required reading.”—New York Times Book Review
 Containing just the Twentieth Century chapters from Howard Zinn’s bestselling *A People’s History of the United States*, this reissue is brought up-to-date with coverage of events and developments since 2001, analyzing such incidents in modern political history such as the Gulf War, the post-Cold War “peace dividend,” and the continuing debate over welfare, the Clinton presidency, and the “war on terrorism.” Highlighting not just the usual terms of presidential administrations and congressional activities, this book provides readers with a “bottom-to-top” perspective, giving voice to our nation’s minorities and letting the stories of such groups as African Americans, women, Native Americans, and the laborers of all nationalities be told in their own words. Challenging traditional interpretations of U.S. history, *The Twentieth Century* is the book for readers interested in gaining a more realistic and complete

picture of our world."
