Starting Out with C++ HarperCollins Madeleine L'Engle's ground-breaking science fiction and fantasy classic, now a major motion picture. It was a dark and stormy night; Meg Murry, her small brother Charles Wallace, and her mother

had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. *A Wrinkle in Time*, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem. *A Wrinkle in Time* is the winner of the 1963 Newbery Medal. It is the first book in *The Time Quintet*, which consists of *A Wrinkle in Time*, *A Wind in the Door*, *A Swiftly Tilting Planet*, *Many Waters*, and *An Acceptable Time*. *A Wrinkle in Time* is now a movie from Disney, directed by Ava DuVernay, starring Storm Reid, Oprah Winfrey, Reese Witherspoon and Mindy Kaling. "In 1925 a team of archaeologists was sent by famed archaeologist James Henry Breasted, the Director of the Oriental Institute of the University of Chicago, to search for the city that King Solomon built in the tenth century BCE. These excavations are rightfully famous for the light they shed on one of the most important cities in biblical times: the ancient city of Megiddo, in Israel, the site of Armageddon. The books and articles that the original participants published are still used, and debated, by archaeologists working in the region today. However, these scholarly publications provide only a small window into the daily activities of the team members and the stories behind their amazing discoveries. Using a treasure trove of other writing - including more than three decades' worth of letters, cablegrams, cards, and diaries, archaeologist and historian Eric Cline, who spent twenty years digging at Megiddo himself, brings the Chicago excavators and their discoveries to life situating them against the backdrop of the Great Depression in the United States as well as the growing troubles and tensions in British Mandate Palestine. Their story, as recounted by Cline, often reads more like melodrama than dry archaeological report and provides a unique a glimpse of the

internal workings of a dig in the early years of biblical archaeology. In the course of telling their story, Cline gives readers the full picture of an archaeological site from its first discoveries to its most recent excavations placing it all in the larger scheme of the rise and fall of civilizations, from the Neolithic Revolution through the Romans"--

**Starting Out with C++** World Book

As the healthcare debate rages on with the growth of the HMO industry, nurses quietly continue to provide the day-to-day grit and deeply-felt passion that hold the healing profession together. Within these remarkable women and men are

poignant, outrageous stories drawn from the edge of life. But fear of career backlash and reprisals have made them reluctant to talk to outsiders about their experience. Now Echo Heron, New York Times bestselling author of *Intensive Care*, draws truths far stranger than fiction out of her colleagues--and allows the nurses to speak to us in their own words. Ranging from inspiring to tragic to outrageously funny, these narratives are real life medical dramas as experienced by nurses across the country--each practicing in a variety of specialties, including cardiac care, labor and delivery, burns, the ER--even a nurse who works in dolphin care. *Tending Lives* portrays a penitentiary nurse responsible for orchestrating a murderer's execution; a stroke victim who rose out of his depression when his nurses began telling him jokes; and, perhaps the most riveting testimony, the moment-by-moment memories of several nurses who served in the aftermath of the Oklahoma City bombing--gripping accounts that give us new perspectives on the horror and heroism of that nightmare day. Pediatric nurses, psychiatric nurses, home-care nurses, intensive care nurses--all with distinct voices and unique stories to tell. Filled with both tears and laughter, and charged with the issues that afflict nursing care today, *Tending Lives* is a gripping, moving, inspiring book, a fitting tribute to a noble profession.

**Complex PTSD** Createspace Independent Publishing Platform  
I have Complex PTSD [Cptsd] and wrote this book from the perspective of someone who has experienced a great reduction of symptoms over the years. I also wrote it from the viewpoint of someone who has discovered many silver linings in the long, windy, bumpy road of recovering from Cptsd. I felt encouraged to write this book because of thousands of e-mail responses to the

articles on my website that repeatedly expressed gratitude for the helpfulness of my work. An often echoed comment sounded like this: At last someone gets it. I can see now that I am not bad, defective or crazy...or alone! The causes of Cptsd range from severe neglect to monstrous abuse. Many survivors grow up in houses that are not homes - in families that are as loveless as orphanages and sometimes as dangerous. If you felt unwanted, unliked, rejected, hated and/or despised for a lengthy portion of your childhood, trauma may be deeply engrained in your mind, soul and body. This book is a practical, user-friendly self-help guide to recovering from the lingering effects of childhood trauma, and to achieving a rich and fulfilling life. It is copiously illustrated with examples of my own and my clients' journeys of recovering. This book is also for those who do not have Cptsd but want to understand and help a loved one who does. This book also contains an overview of the tasks of recovering and a great many practical tools and techniques for recovering from childhood trauma. It extensively elaborates on all the recovery concepts explained on my website, and many more. However, unlike the articles on my website, it is oriented toward the layperson. As such, much of the psychological jargon and dense concentration of concepts in the website articles has been replaced with expanded and easier to follow explanations. Moreover, many principles that were only sketched out in the articles are explained in much greater detail. A great deal of new material is also explored. Key concepts of the book include managing emotional flashbacks, understanding the four different types of trauma survivors, differentiating the

outer critic from the inner critic, healing the abandonment depression that come from emotional abandonment and self-abandonment, self-reparenting and reparenting by committee, and deconstructing the hierarchy of self-injuring responses that childhood trauma forces survivors to adopt. The book also functions as a map to help you understand the somewhat linear progression of recovery, to help you identify what you have already accomplished, and to help you figure out what is best to work on and prioritize now. This in turn also serves to help you identify the signs of your recovery and to develop reasonable expectations about the rate of your recovery. I hope this map will guide you to heal in a way that helps you to become an unflinching source of kindness and self-compassion for yourself, and that out of that journey you will find at least one other human being who will reciprocally love you well enough in that way.

Infection with antibiotic-resistant microbes, often referred as "superbugs," in hospitals can be a common problem. A conventional solution to the problem is to find a new antibiotic. This solution simply accelerates an arms race between microbes and pharmaceutical companies which try to develop an effective antibiotic. We should search for a completely new approach to the problem. This book might suggest an alternative approach for the superbug problem. It describes the tragic experience of a student nurse, Betty, who performed the world's first fecal transplant. It is not well known to the general public, but there are some diseases that infect mostly patients in hospitals. These diseases are often

referred to as post-operative complications or a new infection, due to patients' weakened immune system. Pseudo membranous colitis (PM colitis) was one of such diseases, which predominantly affects patients after surgery of the digestive system. It had a high fatality rate, but there was no known effective treatment. An odd circumstance pushed Betty to perform the world's first fecal transplant and demonstrate its effectiveness. However, because of the stigma attached to feces, fellow medical staff ridiculed her to such a degree that she could not remain as a staff nurse. Later academic researchers identified the pathogen of PM colitis as *Clostridium difficile* (C. diff), and renamed the disease C-diff infection. Again although fecal transplant was an effective treatment for the disease, the mainstream establishment of the medical community ignored the treatment. When C. diff evolved an antibiotic-resistant strain, hundred-thousands of patients died in hospitals every year around the world. In the United States, bureaucratic hurdles prevented research of fecal transplant, despite such a high mortality rate. Eventually, the news of effectiveness of fecal transplant spread on the Internet and many patients started doing by themselves with help of friends and relatives because medical doctors were unwilling to perform such illegal treatment. In 2013, after more than fifty years from Betty's action, FDA finally and reluctantly allowed doctors to perform fecal transplant for limited cases of C-diff infection. FDA also renamed the procedure FMT (Fecal Microbiota Transplantation.) Meanwhile Betty suffered personal tragedy, but she finally retired and enjoyed her peaceful life knowing that the mainstream of the

medical community accepted fecal transplant, even for limited cases. This book also comments on the FDA and NIH's role in new drug development, especially concerned about Ebola epidemic.

Tony Gaddis's accessible, step-by-step presentation helps beginning students understand the important details necessary to become skilled programmers at an introductory level. Gaddis motivates the study of both programming skills and the C++ programming language by presenting all the details needed to understand the

"how" and the "why"-but never losing sight of the fact that most beginners struggle with this material. His approach is both gradual and highly accessible, ensuring that students understand the logic behind developing high-quality programs. In *Starting Out with C++: From Control Structures through Objects*, Gaddis covers control structures, functions, arrays, and pointers before objects and classes. As with all Gaddis texts, clear and easy-to-read code listings, concise and practical real-world examples, and an abundance of exercises appear in every chapter. This text is intended for either a one-semester accelerated introductory course or a traditional two-semester sequence covering C++ programming. This edition is available with MyProgrammingLab, an innovative online homework and assessment tool. Through the power of practice and immediate personalized feedback, MyProgrammingLab helps students fully grasp the logic, semantics, and syntax of programming. ¶ Note: If you are purchasing the standalone text or electronic version, MyProgrammingLab does not come automatically packaged with the text. Community-Led Practices to Build the Worlds We Need Princeton University Press

An exploration of how design might be

led by marginalized communities, dismantle structural inequality, and advance collective liberation and ecological survival. What is the relationship between design, power, and social justice? "Design justice" is an approach to design that is led by marginalized communities and that aims explicitly to challenge, rather than reproduce, structural inequalities. It has emerged from a growing community of designers in various fields who work closely with social movements and community-based organizations around the world. This book explores the theory and practice of design justice, demonstrates how universalist design principles and practices erase certain groups of people—specifically, those who are intersectionally disadvantaged or multiply burdened under the matrix of domination (white supremacist heteropatriarchy, ableism, capitalism, and settler colonialism)—and invites readers to "build a better world, a world where many worlds fit; linked worlds of collective liberation and ecological sustainability." Along the way, the book documents a multitude of real-world community-led design practices, each grounded in a particular social movement. Design Justice goes beyond recent calls for design for good, user-centered design, and employment diversity in the technology and design professions; it connects design to larger struggles for collective liberation and ecological survival.
