Interpreters who work with signed languages and those who work strictly with spoken languages share many of the same issues regarding their training, skill sets, and fundamentals of practice. Yet interpreting into and from signed languages presents unique challenges for the interpreter, who works with language that must be seen rather than heard. The contributions in this volume focus on topics of interest to both students of signed language interpreting and practitioners working in community,

conference, and education settings. Signed languages dealt with include American Sign Language, Langue des Signes Québécoise and Irish Sign Language, although interpreters internationally will find the discussion in each chapter relevant to their own language context. Topics concern theoretical and practical components of the interpreter's work, including interpreters' approaches to language and meaning, their role on the job and in the communities within which they work, dealing with language variation and consumer preferences, and Deaf interpreters as professionals in the field.

Bridging the Gap Dawnsign Press Presents exercises to refine skills in American Sign Language. Topics include: main idea comprehension, summarizing,

lexical substitution, paraphrasing of propositions and discourse, visual form, and meaning.

Medical interpreters need words, but its not always easy to find them or to predict the ones youll need for an assignment. Cynthia Maulen, who has trained interpreters who speak more than fifty different languages, created

this terminology workbook to help interpreters prepare for a variety of assignments and certification exams. The workbook identifies terms used in a variety of medical settings and is arranged by topic, including categories rarely seen in other interpreting texts, such as Abbreviations, U.S. Healthcare Terminology, Medications, and Talking About Pain. You can write in your own translations and create your own glossary no matter what language youre working in. Maulen also uses her extensive interpreting knowledge and down-to-earth approach to provide proven guidance on dealing with the challenges youll face on the job as an interpreter. Whether youre an educator seeking to supplement your curriculum, a student determined to pass an exam,

This volume is divided into five parts and fifteen chapters that address these topics by examining ethnogeriatric foundations, research issues, clinical care in ethnogeriatrics, education and policy. Expertly written chapters, by practicing geriatricians, gerontologists, clinician researchers and clinician educators, present a systematic approach to recognizing, analyzing and addressing the challenges of meeting the healthcare needs of a diverse population and authors discuss ways in

which to engage the community by increasing research participation and by investigating the most prevalent diseases found in ethnic minorities.

Ethnogeriatrics discusses issues related to working with culturally diverse elders that tend not to be addressed in typical training curricula and is essential reading for geriatricians, hospitalists, advance practice nurses, social workers and others who are part of a multidisciplinary team that provides high quality care to older patients.

Consecutive Interpreting from English Baker Books

The history of women interpreters of the Bible is a neglected area of study. Marion Taylor presents a one-volume reference tool that introduces readers to a wide array of women interpreters of the Bible from the entire history of Christianity. Her research has implications for understanding biblical interpretation--especially the history of interpretation--and influencing contemporary study of women and the Bible. Contributions by 130 top scholars introduce foremothers of the faith who address issues of interpretation that

continue to be relevant to faith communities today, such as women's roles in the church and synagogue and the idea of religious feminism. Women's interpretations also raise awareness about differences in the ways women and men may read the Scriptures in light of differences in their life experiences. This handbook will prove useful to ministers as well as to students of the Bible, who will be inspired, provoked, and challenged by the women introduced here. The volume will also provide a foundation for further detailed research and analysis. Interpreters include Elizabeth Rice Achtemeier, Saint Birgitta of Sweden, Catherine Mumford Booth, Anne Bradstreet, Catherine of Siena, Clare of Assisi, Egeria, Elizabeth I, Hildegard, Julian of Norwich, Thérèse of

Lisieux, Marcella, Henrietta C. Mears, Florence Nightingale, Phoebe Palmer, Faltonia Betitia Proba, Pandita Ramabai, Christina Georgina Rossetti, Dorothy Leigh Sayers, Elizabeth Cady Stanton, Harriet Beecher Stowe, St. Teresa of Avila, Sojourner Truth, and Susanna Wesley.

Many people have the need to take notes: interpreters, attorneys, health care providers, and students, among others. Some try to learn short-hand, a complex system which requires several months (even years) of practice to master. There is a widely unknown but simple alternative to take notes more clearly and efficiently. Jean François Rozan and Andrew Gillies, two pioneer conference interpreters, provide techniques to significantly streamline

note-taking. Although originally created for interpreters, these practical guidelines are extremely helpful to anyone who takes notes. The Note-Taking Manual will help you master note-taking symbols as well as Rozan and Gillies' techniques. You will acquire up to 40 new symbols through dictations (available as free audio files at www.interpretrain.com/audio). Each exercise offers a sample of notes to compare with your own and discover additional tips. These educational tools will help you become the best interpreter and/or note-taker you can be. For best results, please see Interprettrain's 10 Lessons to Excel at Consecutive Interpretation. Our multimedia training package is composed of videos, audio, and two

manuals to help you master consecutive interpretation. The program takes you step-by-step through: multi-media classes, drills, exercises, dictations, and evaluations.

Handbook of Research on Medical Interpreting Taylor & Francis

This dissertation examines the decontextualized aspect of medical interpreter training in the United States and whether the training interpreters receive is sufficient to prepare them for the realities of the healthcare contexts in which they work. More specifically, the focus of this dissertation is interpreters' perception of whether the curricular content of the medical interpreter training is sufficient to prepare them for their work environment. This study aims to unveil a number of underlying issues

in current academic and para-academic training curricula in the United States that affect interpreter readiness, as well as highlight the importance of situating medical interpreter training in a wide range of medical contexts. The context is key for construction of meaning, and learning is socially and culturally situated (Lave, 1988). Hale (2013) has argued that knowing the setting in which one interprets is crucial for a successful encounter. The ideas of learning as a situated practice, learning in situ, situated cognition, experiential learning, immersive learning, or legitimate peripheral participation have been developed and studied by a number of scholars. This study examines each briefly, along with simulation-based learning used in training of medical

professionals and how simulation-based learning can be used for training medical interpreters. This dissertation uses a mixed methods approach with medical interpreters as the main participants, and it supplements the findings with insights offered by managers of interpreting services at a number of hospitals in Ohio in order to answer the three questions posed in the study. The first question examines interpreter readiness based on the type of training, and the amount of specialized medical content included in the training they received. The second question assesses whether the current medical interpreter training includes technology. The third question focuses on medical interpreter training needs based on interpreters' and interpreting services managers'

perceptions of the professional demands upon hire as a way of identifying gaps and informing the medical interpreter training curricula in a fast-changing, technologized world. This dissertation concludes by summarizing the key findings, discussing the implications of the study with respect to interpreting pedagogy, offering recommendations for the contextualization of interpreter training in both academic and para-academic learning environments, proposing potential solutions for authentic learning activities, and finally, by posing additional questions for future research in the context of interpreter training.

Interpreter of Maladies John Benjamins Publishing

This volume □ the first-ever collection of

research on healthcare interpreting □ centers on three interrelated themes: cross-cultural communication in healthcare settings, the interactional role of persons serving as interpreters and the discourse patterns of interpreter-mediated interaction. The individual chapters, by seven innovative researchers in the area of community-based interpreting, represent a pioneering attempt to look beyond stereotypical perceptions of interpreter-mediated interactions. First published as a Special Issue of *Interpreting 7:2* (2005), this volume offers insights into the impact of the interpreter □ whether s/he is a trained professional or a member of the patient's family □ including ways in which s/he may either facilitate or impair reliable

communication between patient and healthcare provider. The five articles cover a range of settings and specialties, from general medicine to pediatrics,

psychiatry and speech therapy, using languages as diverse as Arabic, Dari, Farsi, Italian and Spanish in combination with Danish, Dutch, English and French.
