Don't know much about biology? The Complete Idiot's Guide® to College Biology follows the curriculum of Biology 101 so closely that it serves as a perfect study guide, and it's also great for AP Biology and SAT Subject Biology exams that high school students are taking in droves. Students can turn to it when their textbooks are unclear or as an additional aid throughout the semester. The number of high school students who took AP Biology in 2008 increased 7 percent over the previous year (more than 154,000) College biology doesn't just lead to medical, dental, or veterinary school—biotechnology and biochemical jobs remain hot in today's job market Follows in the footsteps of The Complete Idiot's Guides® as a terrific supplementary reading for AP Biology, though it follows the curriculum of the college Intro to Biology course.

Super Simple Chemistry Test Prep Books

Clear, concise, and well-organized, the Cell and Molecular Biology Study Guide is an excellent learning tool for students of cellular and molecular biology. The sixteen chapters of the book follow a logical progression beginning with an introduction to cells and concluding with an overview of current techniques in cellular and molecular biology. Each brief chapter effectively separates core concepts, clarifying each individually and creating a set of building blocks that allow students to fully comprehend one aspect of the subject matter before moving on to the next. Topics in the guide include: Bioenergetics, Enzymes, and Metabolism The Plasma Membrane The Cytoskeleton and Cell Motility DNA Replication and Repair Cell Signaling and Signal Transduction The book also covers aerobic respiration and mitochondria, photosynthesis, and the chloroplast, the nature of the gene and genome, gene expression, and cellular reproduction. Accessible and informative, Cell and Molecular Biology Study Guide can be used as a companion to standard textbooks in the field. It is also a useful reference tool for students new to the discipline or those looking for a quick review of the subject matter. Mark Running earned his Ph.D. in genetics at the California Institute of Technology and completed postdoctoral research at the University of California, Berkeley. Dr. Running is an assistant professor in the Department of Biology at the University of Louisville in Kentucky where he teaches courses in developmental, cellular, and molecular biology. In addition to his teaching, he serves on the Undergraduate Curriculum Committee. Dr. Running is the recipient of numerous grants from the National Science Foundation, and was a Howard Hughes Predoctoral Fellow and a Damon Runyon-Walter Winchell Cancer Research Postdoctoral Fellow.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.

This book effectively translates author Hank Green's YouTube video sensation of biology Crash

Courses into guided question worksheets. Students follow along with Hank Green's online Crash Courses and reflect upon topics in biology using this interactive guiding question workbook. A quick type in on a Google search engine or YouTube of "Crash Course Biology" will take one to the desired site of where 40 episodes can be found. Common Core biology standards are followed in all questions inside of the Crash Course Biology: A Study Guide of Worksheets for Biology workbook helping students tap into level 3 and 4 DOK (Depth of Knowledge) thinking skills in biology while actively learning while listening to Hank Green's Biology Crash Course videos. This workbook can be used to focus students either with or without headphones on a laptop while watching the desired YouTube video thus eliminating distraction in a desired setting. Questions posed are in accordance with AP high school biology standards (aka college level biology standards) and can be used in order to improve test scores, content understanding, and effectively build upon essay structure in writing about topics in biology. Target audience includes but is not limited to native English speakers and English language learners ages 15-22. Note: Those without access to YouTube can still use these guiding questions as a guide in order find answers using their respective biology book, and by looking up answers using bolded key terms and vocabulary. Questions posed in this book are meant to inspire paragraph development including intro, thesis, body, and conclusion paragraph structure while affording the reader opportunities to analyze, evaluate, and reflect upon a wide number of topics found in biology.
