Demographers and public health specialists have been surprised by the rapid increases in life expectancy, especially at the oldest ages, that have occurred since the early 1960s. Some scientists are calling into question the idea of a fixed upper limit for the human life span. There is new evidence about the genetic bases for both humans and other species. There are also new theories and models of the role of mutations accumulating over the life span and the possible evolutionary advantages of survival after the reproductive years. This volume deals with such diverse topics as the role of the elderly in other species and among human societies past and present, the contribution of evolutionary theory to our understanding of human longevity and intergenerational transfers, mathematical models for survival, and the potential for collecting genetic material in household surveys. It will be particularly valuable for promoting communication between the social and life sciences.

The study is a comparative historical work that looks at three pieces of British Catholic legislation--the Treaty of Limerick ratification bill (1697), the Quebec Act (1774) and the Irish Catholic Relief Act (1778)--to clarify the processes leading to these policy outcomes and show how the outcomes were associated with the general trend toward Catholic relief in the British empire during the eighteenth century. It makes use of the institutional approach, a perspective, it is argued, that allows for much more detailed analyses of policy events and long-term social transformations than are possible using traditional

sociological approaches to state power and social change. In each case, the most important formal (constitutional principles, legal statutes) and informal (norms, established procedures) institutions governing the negotiation of the policy are identified, and the circumstances that gave rise to them and helped to institutionalise them are assessed. It is then shown how these institutions structured each policy-making process by establishing the "rules" individuals participating in the process had to follow, or take into account, during policy negotiations. By providing the structural framework within which each policy process took place, institutions shaped the way in which human action and contingency came together to encourage the emergence of a particular measure. The indirect influence of institutions on policy outcomes helps to explain variations in Catholic legislation over time and across territories. More than this, the thorough analyses of each policy event required by the institutional approach show that the factors usually used to explain the movement toward Catholic relief--the gradual growth of more tolerant attitudes among British elites, or considerations concerning military security or international diplomacy--can misrepresent the movement. The analysis reveals that, although the Quebec Act and the Irish Catholic Relief Act were linked, the nature of those connections was much less straightforward than these explanations suggest. The result shows that the movement toward Catholic relief was not driven by any one particular factor or force, but was the accumulation of the many complex, and largely unpredictable, outcomes of the specific events that comprised the transformation.

Scholars consider ways in which the social movement has changed as a political form, and how it changes the societies in which it occurs. This volume contains revealing perspectives on the effectiveness of social protest.

During the Cold War, nationalism fell from favour among theorists as an explanatory factor in history, as Marxists and liberals looked to class and individualism as the driving forces of change. The resurgence of nationalism after the collapse of the Soviet Union, however, called for a reconsideration of the paradigm. Against Orthodoxy uses case studies from around the world to critically evaluate decades of new scholarship. The authors argue that theories of nationalism have ossified into a new set of orthodoxies. These overlook nationalism's role as a generative force, one that reflects complex historical, political, and cultural arrangements that defy simplistic explanations.

Wide-ranging essays on Jean-Luc Nancy's thought. Jean-Luc Nancy is one of the leading voices in European philosophy of the last thirty years, and he has influenced a range of fields, including theology, aesthetics, and political theory. This volume offers the widest and most up-to-date responses to his work, oriented by the themes of world, finitude, and sense, with attention also given to his recent project on the "deconstruction of Christianity." Focusing on Nancy's writings on globalization, Christianity, the plurality of art forms, his materialist ontology, as well as a range of contemporary issues, an international group of scholars provides not just inventive interpretations of Nancy's work but also essays taking on the most pressing issues of today. The collection brings to the fore the originality of his thinking and points to the future of continental philosophy. A previously unpublished interview with Nancy concludes the volume. "This invaluable collection engages with the full range of Nancy's philosophical concerns to offer a series of enriching and highly illuminating critical perspectives. It demonstrates the importance

of Nancy's work for philosophical reflection on the contemporary world." — Ian James, author of *The Fragmentary Demand: An Introduction to the Philosophy of Jean-Luc Nancy*

The discovery of a dead body in the woods on Thanksgiving Weekend brings Chief Inspector Armand Gamache and his colleagues from the Surete du Quebec to a small village in the Eastern Townships. Gamache cannot understand why anyone would want to deliberately kill well-loved artist Jane Neal, especially any of the residents of Three Pines - a place so free from crime it doesn't even have its own police force. But Gamache knows that evil is lurking somewhere behind the white picket fences and that, if he watches closely enough, Three Pines will start to give up its dark secrets... Celebrating ten years of Chief Inspector Gamache, this collector's edition contains an exclusive, illuminating and in-depth profile of Louise Penny, creator of one of the most enduring and distinctive characters in crime fiction.

This report provides an overview of the current state of knowledge about why some people hear voices, experience paranoia or have other experiences seen as 'psychosis'. It also describes what can help. In clinical language, the report concerns the 'causes and treatment of schizophrenia and other psychoses'. In recent years we have made huge progress in understanding the psychology of what had previously often been thought of as a largely biological problem, an illness. Much has been written about the biological aspects: this report aims to redress the balance by concentrating on the psychological and social aspects, both in terms of how we understand these experiences and also what can help when they become distressing. We hope that this report will contribute to a fundamental change that is already underway in how we as a society think about and offer help for 'psychosis' and 'schizophrenia'. For example, we hope that in future services will no longer insist that service users accept one particular view of their problem, namely the traditional view that they have an illness which needs to be treated primarily by medication. The report is intended as a resource for people who work in mental health services, people who use them and their friends and relatives, to help ensure that their conversations are as well informed and as useful as possible. It also contains vital

information for those responsible for commissioning and designing both services and professional training, as well as for journalists and policy-makers. We hope that it will help to change the way that we as a society think about not only psychosis but also the other kinds of distress that are sometimes called mental illness. This report was written by a working party mainly comprised of clinical psychologists drawn from the NHS and universities, and brought together by their professional body, the British Psychological Society Division of Clinical Psychology. This report draws on and updates an earlier one, *Recent Advances in Understanding Mental Illness and Psychotic Experiences*, which was published in 2000 and was widely read and cited. The contributors are leading experts and researchers in the field; a full listing with affiliations is given at the end of the report. More than a quarter of the contributors are experts by experience - people who have themselves heard voices, experienced paranoia or received diagnoses such as psychosis or schizophrenia. At the end of the report there is an extensive list of websites, books and other resources that readers might find useful, together with list of the academic research and other literature that the report draws on.

The Politics of Protest offers both a historical overview and an analytical framework for understanding social movements and political protest in American politics. Meyer shows that protest movements, an integral part of our nation's history from the Boston Tea Party to the Civil Rights Movement, are hardly confined to the distant past. He argues that protest movements in America reflect and influence mainstream politics and that in order to understand our political system--and our social and political world--we need to pay attention to protest. The Politics of Protest opens with a short history of social movements in the United States, beginning with the development of the American Republic and outlining how the American constitutional design invites protest movements to offer continual challenges. It then discusses the social impulse to protest, considers the strategies and tactics of social movements, looks at the institutional response to protest, and finally examines the policy ramifications. Each chapter includes a brief narrative of a key movement that illustrates the topic covered in that chapter. New to This Edition \* A new chapter on media and movements (Chapter 6: Protest and Communication: New and Old Media) that examines how media has changed in the past two decades, focusing in particular on online activism \* New discussions on such topics as the election of a black president, the emergence of the Tea Party movement, and the intensifying conflict regarding immigration policy \* More material on the successes of the gay and lesbian movement in promoting policy changes to marriage at the state level and in national military service

Print edition of multi-author work on Indigenous song. This is the first volume devoted specifically to the revitalisation of ancestral Indigenous singing practices in Australia. These traditions are at severe risk in many parts of the country, and this book investigates the strategies currently being implemented to reverse the damage. In some areas the ancestral musical culture is still transmitted across the generations; in others it is partially remembered, and being revitalised with the assistance of

heritage recording and written documentation; but in many parts of Australia, the transmission of songs has been interrupted, and in those places revitalisation relies on research and restoration. The authors, Indigenous and non-Indigenous, consider these issues across a broad range of geographical locations, and from a number of different theoretical and methodological angles. The chapters provide helpful insights for Indigenous people and communities, researchers and educators, and anyone interested in the song traditions of Indigenous Australia.

David Fisher, MD, PhD, and an authoritative panel of academic, cutting-edge researchers review and summarize the current state of the field. Describing the broad roles of tumor suppressors from a perspective based in molecular biology and genetics, the authors detail the major suppressors and the pathways they regulate, including cell cycle progression, stress responses, apoptosis, and responses to DNA damage. Leading-edge and forward-looking, *Tumor Suppressor Genes in Human Cancer*

illuminates what is currently known of tumor suppressor genes and their regulation, work that is already beginning to revolutionize cancer target elucidation, drug discovery, and treatment design.

Canadians have a right to live in cities that meet their basic needs in a dignified way, but in recent decades increased inequality and polarization have been reshaping the social landscape of Canada's urban areas. This book examines the dimensions and impacts of increased economic inequality and urban socio-spatial polarization since the 1980s. Based on the work of the Neighbourhood Change Research Partnership, an innovative national comparative study of seven major cities, the authors reveal the dynamics of neighbourhood change across the Canadian urban system. While the heart of the book lies in the project's findings from each city, other chapters provide important context. Taken together, they offer important understandings of the depth and the breadth of the problem at hand and signal the urgency for concerted policy responses in the decades to come.

Structural health monitoring is an extremely important methodology in evaluating the 'health' of a structure by assessing the level of deterioration and remaining service life of civil infrastructure systems. This book reviews key developments in research, technologies and applications in this area of civil engineering. It discusses ways of obtaining and analysing data, sensor technologies and methods of sensing changes in structural performance characteristics. It also discusses data transmission and the application of both individual technologies and entire systems to bridges and buildings. With its distinguished editors and international team of contributors, *Structural health monitoring of civil infrastructure systems* is a valuable reference for students in civil and structural engineering programs as well as those studying sensors, data analysis and transmission at universities. It will also be an important source for practicing civil engineers and designers, engineers and researchers developing sensors, network systems and methods of data transmission and analysis, policy makers, inspectors and those responsible for the safety and service life of civil infrastructure. Reviews key developments in research, technologies and applications. Discusses systems used to obtain and analyse data and sensor technologies. Assesses methods of sensing changes in structural performance.
