This is the first book to analyze in depth the current causes of shortage of family physicians and the relative weakness of the family practice model in many countries in the Eastern Mediterranean Region. Focusing on engagement with the private health sector in scaling up family practice, the book explores why primary health care can make the difference and how it can be introduced and strengthened. Comparative experiences from around the world put the EMR in context, while the book also highlights where the EMR is special – in particular, the burden for health care of refugees and displaced persons, and the need of public-private partnerships.

Burnout affects a third of our population and over half of our health professionals. For the second group, the impact is magnified, as consequences play out not only on a personal level,

but also on a societal level and lead to medical errors, suboptimal care, low levels of patient satisfaction, and poor clinical outcomes. Achieving wellbeing requires strategies for change. In this book, Dr. Pipas shares twelve lessons and strategies for improved health that she has learned from patients, students, and colleagues over her twenty years working as a family physician. Each lesson is based on observation and research, and begins with a story of an exemplary patient whose challenges and successes reflect the theme of the lesson. Along with the lessons, the author offers plans for action, which taken together create the framework for a healthy life. Each lesson concludes with resources and a “health challenge.”

This book aims to help identify pre-existing adaptive traits and positive perspectives in resident trainees, while challenging those that are less adaptive by building a formal curriculum for medical education that focuses on the humanistic aspects of medicine. Humanism in medicine is threatened by the false narrative that good physicians are superhumans who do not have their own needs. Written by experts in the field, this book is designed to be a concise, integrated guide to resilience during residency training. Through this guide, trainees learn (i) the usefulness of psychotherapeutic strategies for their own stress management and well-being; (ii) techniques and strategies that are useful in the practice of medicine; and (iii) to consider lifestyle modifications to improve physical and psychological health and well-being, through identification of positive and negative lifestyle factors influencing physicians’ response to stress. Since it is

designed for busy trainees and physicians, this volume meticulously provides easy-to-use, evidence-based learning tools and therapeutic techniques, including case studies, skill-building exercises, self-test questionnaires, illustrations, useful practice-reminder tips, and other features. *Humanism and Resilience in Residency Training* is an excellent resource for all medical trainees and professionals who need to incorporate humanism and resilience in their practice, both for accreditation requirements and for personal well-being. This includes medical students and residents, psychiatrists, addiction medicine specialists, family physicians, medical education professionals, hospitalists, nurses, and all healthcare providers

Why is depression bad for heart disease? And how does heart disease contribute to depression? And why is treatment for depressed people with heart disease so often inadequate?

Through personal vignettes, accessible scientific explanations, and medical illustrations, *Treating the Aching Heart* traces the vicious cycle of depression and heart disease and points the way to better care based on cutting-edge science. The book presents a new view of depression as a broad-reaching illness with a distinct neurobiology that influences the most up-to-date model of heart disease. *Treating the Aching Heart* provides a window into the most studied mind-body problem, the interaction between the brain and the heart. Though many mysteries remain, in no other area is the relationship between a mental disorder and a physical disorder better understood than in the study of depression and heart disease. Anyone who has suffered from depression (about one in four U.S. adults) or some form of heart disease (also about one in four), or has a close family member with either problem, will find this book a useful guide to treatment.

High-quality primary care is the foundation of the health care system. It provides continuous, person-centered, relationship-based care that considers the needs and preferences of individuals, families, and communities. Without access to high-quality primary care, minor health problems can spiral into chronic disease, chronic disease management becomes difficult and uncoordinated, visits to emergency departments increase, preventive care lags, and health care spending soars to unsustainable levels. Unequal access to primary care remains a concern, and the COVID-19 pandemic amplified pervasive economic, mental health, and social health disparities that ubiquitous, high-quality primary care might have reduced. Primary care is the only health care component where an increased supply is associated with better population health and more equitable outcomes. For this reason, primary care is a common good, which makes the strength and quality of the country's primary care services a public concern. A revolutionary, collaborative approach to design and construction project delivery Integrating Project Delivery is the first book-length discussion of IPD, the emergent project delivery method that draws on each stakeholder's unique knowledge to address problems before they occur. Written by authors with over a decade of research and practical experience, this book provides a primer on IPD for architects, designers, and students interested in this revolutionary approach to design and construction. With a focus on IPD in everyday operation, coverage includes a detailed explanation and analysis of IPD guidelines, and case studies that show how real companies are applying these guidelines on real-world projects. End-of-chapter questions help readers quickly review what they've learned, and the online forum allows them to share their insights and ideas with others who either have or are in the process of implementing IPD themselves. Integrating Project Delivery brings together the owners, architect, engineers, and contractors early in the development stage to ensure that problems are caught early, and to address them in a collaborative way. This book describes the parameters of this new, more efficient approach, with expert insight on real-world implementation. Compare traditional procurement with IPD

Understand IPD guidelines, and how they're implemented
Examine case studies that illustrate everyday applications
Communicate with other IPD adherents in the online forum
The IPD approach revolutionizes not only the workflow, but the relationships between the stakeholders – the atmosphere turns collaborative, and the team works together toward a shared goal instead of viewing one another as obstructions to progress. Integrated Project Delivery provides a deep exploration of this approach, with practical guidance and expert insight.

Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected. Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the second of two, builds off the conclusions of the first report and outlines a strategy for hepatitis reduction over time and specific actions to achieve them.
