The reason is that, if the sample size does not exceed 5% of the population size, there is little difference between sampling with and without replacement (Weiss 2010). Binomial and Hypergeometric Distribution • SOGA ... In probability theory and statistics, the hypergeometric distribution is a discrete probability distribution that describes the probability of  $k$  successes in  $n$  draws, without replacement, from a finite population of size  $N$  that contains exactly  $K$  objects with that feature, wherein each draw is either a success or a failure.
