The software also provides new color settings that are closer to the real colors. It also supports the application of gradients and brush strokes and even applies Photoshop's special tone detection, which detects color from the environment to automatically adjust the colors of a digital image to suit. As digital images are hybrids of various types of pixels from different parts of the camera's sensor, a color filter helps to extract only the amount of light that is required from the color sensor for the desired image color. The best thing about the new Photoshop software is that it allows users to create photographs that are realistic and remain natural when viewed in the real environment, while at the same time retaining an accurate reproduction of reality in its digital form. This is an exciting time for digital imaging and Adobe Photoshop can be purchased for a very affordable price, making it well worth the money for graphic
