This comprehensive and concise text is ideal for use with the International Baccalaureate Mathematics HL & SL courses in a clear and easy to use format. The author has developed this text after many years of teaching and examining IB Mathematics. This 2006-13 Edition of Mathematics HL & SL has been written specifically for the International Baccalaureate Syllabuses for students taking exams until November 2013. Students taking exams in May 2014 or later should buy the 2012-19 Edition instead of this one. The HL Options of Statistics and Probability, Set, Relations and Groups, and Series and Differential Equations are included. In each chapter the information relative to the topic is discussed and several examples providing various approaches to the solutions are given. The exercises provided with each section have been carefully graded from the relatively easy to the more difficult. Answers to all odd-numbered questions and some even-numbered ones are provided. The required outcomes are featured at the end of each chapter.

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced

Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.
