"Several features within
the book will help our
students understand and
appreciate the science
behind our knowledge.

Each chapter begins with
an opening vignette—a
short story that frames a
basic question within the
context of both
contemporary and
historical issues—visually
supported by a dynamic
illustration. As the chapter
unfolds, references back
to the opening vignette
are made repeatedly. At

the conclusion of each
chapter, an additional
feature, The Rest of the
Story, refers back to this
opening vignette and art.
This also ties into an
active learning feature,
Image in Action, that
includes several critical-
thinking questions. Each
chapter contains a Mini-
Paper, a synopsis of a

scientific journal article that includes original data Questions for Discussion, and interactive online questions that focus on concepts and experimental design. Through the use of this feature, students will see how microbiologists ask intelligent questions, rationally design experiments, and evaluate data. In this edition, several new Mini-Papers have been included. Again, this feature will improve students' critical thinking skills and show them that

our knowledge is evidence-based"--
