Software comes from India, hardware comes from China. Why is that? Why did China and India take such different paths to global dominance in new high-tech industries? Will their paths continue to diverge or converge? How can other countries learn from their successes--and failures--in reaching global scale in new industries? To answer these questions, this book presents the first rigorous comparison of the growth of the IT industries in China and India, based on interviews with over 300 companies. It explains the different growth paths of the software and hardware sectors in each country, providing insights into the factors behind the emergence of China and India as global economic powers. It provides a compelling case study of how differences in economic policies and the investment climate affect industrial growth. This book sheds new light on common debates on 'China versus India', on why India is the software capital of the world while China is a manufacturing powerhouse. It refutes common myths about the growth of these industries for example, the role of Non-Resident Indians or the Y2K problem in the growth of the Indian software industry, the role of government intervention in industrial growth, and the relative size of China and India's software industries.

Whether students pursue a professional career in accounting or in other areas of management, they will interact with accounting systems. In all

organizations, managers rely on management accounting systems to provide information to deal with changes in their operating environment. This book provides students and managers with an understanding and appreciation of the strengths and limitations of an organization's accounting system, and enables them to be intelligent and critical users of the system. The text highlights the role of management accounting as an integral part of the organization's strategy and not merely a set of individual concepts and computations. An analytical framework for organizational change is used throughout the book to underscore how organizations must adapt to create customer and organizational value. This framework provides a way to examine and analyze the organization's accounting system, and as a basis for evaluating proposed changes to the system. With international examples that bring the current business environment to the forefront, problems and cases to promote critical thinking, and online support for students and instructors, Management Accounting in a Dynamic Environment is no mere introductory textbook. It prepares readers to use accounting systems intelligently to achieve organizational success. The authors have identified several cases to accompany each chapter in the textbook. The communications environment is rapidly changing. The barriers of traditional phone and data technologies are going to break down, and users can expect a true multimedia environment with existing services transferred and new services implemented. New suppliers, such as cable companies, will compete with interexchange carriers, RBOCs, and local phone companies for the market share. The differentiator is the price/performance ratio of the service under consideration. Today's migrated and new services lack powerful management solutions. Telecom Operations Management Solutions with NetExpert examines the most advanced products available to manage new technologies as well as addresses services, such as: Advanced telephony Wireless networks Commercial broadband Mass-market broadband Competitive access services Intercarrier communications Infrastructure

services This resource also demonstrates how expert systems solve the problem of handling the large volume of data streams from numerous network components. Practical solutions support each example of an application - offering first-hand operational experience. The book provides practical examples to deploy management solutions based on NetExpert framework from Objective Systems Integrator. The framework consists of the principal modules, such as a gateway to managed devices and services as well as the workstation for operators. This framework is extended by point rulesets to manage individual devices by domain rulesets to manage device groups by enterprise rulesets to manage complete telco services The solution sets support all layers of telecommunication management networks, such as element, network, service, and business layers. As a result, these solution sets are extremely important to both incumbent and new telco service providers. Numerous cases cover customized solutions for managing wireless networks, sonet rings, ATM, old and new phone services, broadband services, and special access services of ISPs. Telecom Operations Management Solutions with NetExpert describes never-before-published information about solution sets based on an expert-system-based framework.
