Education (Us)

Educational Psychology: Developing Learners is known for its exceptionally clear and engaging writing, its in-depth focus on learning, and its extensive concrete applications. Its unique approach helps students understand concepts by examining their own learning and then showing them how to apply these concepts as teachers.

More than any other educational psychology text, this text moves seamlessly between theory and applications, features the most extensive and integrated coverage of diversity,

contexts of learning, neuropsychology and brain development, and classroom applications of technology. It includes innumerable concrete examples to help readers connect educational psychology to real children and classrooms. From reviews of the book: Rather than simply presenting the necessary content, the author makes you feel like she is talking directly to you...I love that diversity that has been woven throughout the fabric of this text...Ormrod's personalized writing style will reach undergraduate students in a way that few authors can. [The book] is concise, yet thorough; comprehensive, yet unpretentious.--Angela Bloomquist, California University of Pennsylvania 'Compared to other texts, Ormrod's text is written in a more accessible way...Strengths [include] accessibility, good use of supplementary materials, [and] updated research. --David Yun Dai, University at Albany, SUNY Love how each chapter discusses diversity and special needs! ...Most students keep this text throughout their teaching careers as a resource. Of all the educational psychology textbooks that I've used,

this one is the most comprehensive and interactive with vivid examples...The supplemental materials are very useful. The power point is extensive and easy to use for lecture. I use the test bank materials and find the questions to be aligned with students' licensure exams. --Cindy Ballantyne, Northern Arizona University Note: MyEducationLab does not come automatically packaged with this text. Complete Arabic (Learn Arabic) Wentworth Press This compact, scholarly book treats creating a curriculum as an ongoing process, the product of which is a composite of what is intended (planned curriculum), what actually happens (enacted curriculum), and how what happens influences those involved (experienced curriculum).

It proposes that desirable educational experiences arise when the interaction of these three curricula is flexible and evolving; and, therefore, the authors never advance specific, "best" practices or "most correct" answers to fundamental curriculum questions. Rather, through a finely honed discussion of essential theoretical and practical alternatives, they invite readers to develop their own points of view. Major discussions of postmodernism, autobiographical techniques, gender, and race. The book also includes coverage of recent actions by state governing agencies and boards of education and aligning curriculum with state standards. For professionals in the field of teaching.

Tony Buzan, 'the biggest

name in memory', takes a fascinating and exuberant look at the enormous potential of a child's brain and provides parents with the practical tools they need to help their children achieve it. Mind maps, memory games and other techniques allow parents to encourage learning and development for children of all ages. With Tony Buzan it's all brain, no pain! Research shows that the time and energy you dedicate to your child in the first five years pays off dividends for the next ten. With competition for the best schools stiffening, parents having children later and being more aware of the part they must play in their child's education, there is more and more demand for practical resources like Brain Child. Tony Buzan, world-renowned inventor Mind Maps, has written the ultimate 'operations manual' to help parents liberate their child's true brain potential. He explains how the brain develops and the simple things you can do to stimulate your child's multiple intelligences - including social, creative, numerical and physical - and unlock his or her natural genius. • Bring out the Leonardo or Einstein in your child • Share fun

memory games, number skills and Mind Maps• Raise your child to be happy and confident• Learn new ways of talking to and reading with your child• Let your child love numbers as well as words• Watch him or her excel at school and succeed in lifeAll parents who pick up this book will be inspired and empowered by Tony's understanding of their child's brain and what they can do to fulfil his or her true potential.

How Smart Parents Make Smart Kids IGI Global

This book has been written to provide a current, practical, Australian-based approach to designing and developing curriculum. The demands of schools and educational systems today are such that teachers with practical curriculum skills are highly valued and this book provides a vital source for teachers who wish to build their skills in the field of curriculum design and development. The book addresses the needs of curriculum developers by examining the nature of the curriculum process and how it can be applied in schools. A particular strength is the way in which the chapters are structured around a model of curriculum development. As the model unfolds the reader is familiarised with the various elements of curriculum including situational analysis, intent, content, learning activities and evaluation. Teachers will appreciate the value of

understanding these elements and in so doing will acquire valuable skills of curriculum design and development. A feature of this book is that it addresses the issues of curriculum implementation and curriculum change. To devise a curriculum document in these times is tough enough. Those who wish to see their curricula succeed must be involved with implementing that curriculum and the curriculum change that results. This important new book is particularly appropriate to classroom teachers, system developers and student teachers studying curriculum.

This engaging series of childhood recollections tells about an ideal school in Tokyo during World War II that combined learning with fun, freedom, and love. This unusual school had old railroad cars for classrooms, and it was run by an extraordinary man-its founder and headmaster, Sosaku Kobayashi--who was a firm believer in freedom of expression and activity. In real life, the Totto-chan of the book has become

one of Japan's most popular television personalities--Tetsuko Kuroyanagi. She attributes her success in life to this wonderful school and its headmaster. The charm of this account has won the hearts of millions of people of all ages and made this book a runaway bestseller in Japan, with sales hitting the 4.5 million mark in its first year.

Although Abu Hamid

Muhammad al-Ghazali

lived a relatively short life (1058-1111), he

established himself as one of the most important

thinkers in the history of

Islam. The Incoherence of the Philosophers, written

after more than a decade of travel and ascetic

contemplation, contends that while such Muslim

philosophers as Avicenna boasted of unassailable

arguments on matters of theology and

metaphysics, they could not deliver on their

claims; moreover, many of their assertions

represented disguised heresy and unbelief.

Despite its attempted refutation by the twelfth-

century philosopher Ibn Rushd, al-Ghazali's work

remains widely read and

influential.

In terms of becoming a

successful bioentrepreneur, there is still much more to learn. There are many ways to learn the essential fundamentals of entrepreneurship, including through the mistakes of previous businesses and models. Increased knowledge and a better understanding of what works can be derived from these previous failures and mistakes. Additionally, learning from other bioentrepreneurs can help businesses run successfully. By looking deeper into business models, product development, the fundamental concepts of bioentrepreneurship, and the essential characteristics of bioentrepreneurs, one can become better equipped to understand the role of biological sciences in entrepreneurship, specifically the role of product development. Bioentrepreneurship and Transferring Technology Into Product Development provides a comprehensive

understanding of the role of biological sciences, specifically in transforming technology into commercial product. This book compiles the theoretical and practical aspects of bioentrepreneurship and discusses the various factors, including creating business plans, acquiring funding, and successful business models. The chapters also cover areas such as small-scale product development, intellectual property rights, funding schemes for start-ups, and new prospective biotechnology product development. This book is essential for bioentrepreneurs, entrepreneurs, product developers, scientists, practitioners, researchers, academicians, and students interested in product development from a biological science perspective.
