refinery waste - Spent bleaching ...

Spent bleaching earth (SBE) is the extraction of residual oil from palm oil refining industry. However, the disposal of SBE to landfill may be limited by strict environment regulations in the near future.

In-situ transesterification of residual vegetable oil in ...

Spent bleaching earth (SBE) derived from

the degumming and bleaching of crude palm oil (CPO) from physically refined palm oil is commonly disposed off at landfills at a high cost. Its disposal has so far led to environmental degradation but has not been addressed. Various alcohols and hydrocarbons were used as solvents to extract the residual oil in spent bleaching clay from palm oil refining. The content of oil and minor

components in the spent clay was >40% by weight.

Residual Oil From Spent Bleaching Earth Sbe For

The spent bleaching clays (SBC) of vegetable oil refining plants have residual vegetable oil contents ranging from 17 to 40 wt%. The common worldwide practice of landfilling such spent clays imposes inevitable environmental hazards.
