Higher Education Through Open and Distance Learning

Fordham Univ Press

This book includes a collection of articles with the broad theme of disease connection to chromatin structure and function. It elaborates on the molecular pharmacology of the drugs targeting chromatin structure and its components. The book contains up-to-date information about the chromatin structure and chromatin related diseases and drug functions. This work is the first endeavor to present different aspects encompassing the above theme.

Bridging the Digital Divide CRC Press

Indian states are the main arenas in which popular expectations around healthcare, education, and social security intersect with electoral politics. Yet the ways in which state politics shape India's social welfare policies are inadequately understood. After a decade of experimentation with new rights-based approaches to social policy at the national level, there is a pressing need to understand how regional political environments influence the ways in which policies are initiated and enacted on the ground. Written by political scientists and a sociologist with expertise across India's regions, this volume presents comparative analyses of the emergent politics of welfare across Indian states. Bringing together ground-level empirical data and innovative perspectives, it investigates the ways in which state-level political dynamics shape policies in the fields of education, health insurance, social security, employment, and food subsidies. In-depth and timely, the book allows for a deeper understanding of the diversity of welfare scenarios in contemporary India. "

The Sovereign Lives of India and Pakistan Oxford University Press, USA

The shortcomings of modern cryptography and its weaknesses against computers that are becoming more powerful necessitate serious consideration of more robust security options. Quantum cryptography is sound, and its practical implementations are

becoming more mature. Many applications can use quantum cryptography as a backbone, including key distribution, secure direct communications, large prime factorization, e-commerce, e-governance, quantum internet, and more. For this reason, quantum cryptography is gaining interest and importance among computer and security professionals. Quantum Cryptography and the Future of Cyber Security is an essential scholarly resource that provides the latest research and advancements in cryptography and cyber security through quantum applications. Highlighting a wide range of topics such as e-commerce, machine learning, and privacy, this book is ideal for security analysts, systems engineers, software security engineers, data scientists, vulnerability analysts, professionals, academicians, researchers, security professionals, policymakers, and students.

Gendering the Massification Generation BoD – Books on Demand

This volume brings together scholarship from different disciplines on the theme of neoliberalism.

Quantum Cryptography and the Future of Cyber Security Elsevier

Pastoralist traditions have long been extraordinarily important to the social, economic, political, and cultural life of western India. The Marathi-language oral literature of the Dhangar shepherds is not only one of the most important elements of the traditional cultural life of its region, but also a treasure of world literature. This volume presents translations of two lively and well-crafted examples of the ovi, a genre typical of the oral literature of Dhangars. The two ovis in the volume narrate the stories of Biroba and Dhuloba, two of these shepherds' most important gods. Each of the ovis tells an elaborate story of the birth of the god—a miraculous and complicated process in both cases—and of the struggles each one goes through in order to find and win his bride. The extensive introduction provides a literary analysis of the ovis and discusses what they reveal about the cosmology, geography, society, and political arrangements of their performers' world, as well as about the performers' views of pastoralists and women.

Gendering the Massification Generation examines why young

people from the same families and communities in India experience different decision-making processes regarding higher education access because of their gender. In India and other contexts where higher education is massifying, and gender parity of enrolment has been reached at undergraduate level, there are still many questions to be asked about gender and access to higher education. Based on an exploratory study of gendered higher education access and choice within the state of Haryana, India, the authors explore gender inequalities of higher education access and choice in the Indian context and connect this with the broader international phenomenon of widening participation. Through an in-depth analysis of the 'massification generation', where young people from relatively disadvantaged backgrounds are accessing higher education, often for the first time in their families and communities, readers are encouraged to apply a lens of social disadvantage and gender, and to recognise the norms and transgressions of femininity and masculinity in relation to higher education access and choice. With global implications for the ways in which gender is analysed and framed in widening participation research and policy, this is the ideal book for scholars, students and policy makers working on higher education, as well as researchers and NGOs specialising in gender, school-to-higher education transitions, international development, sociology and area studies.

Big Data Applications for Improving Library Services Khairur Rahim Ahmad Hilme

Today's economies fail to recognise that we are in a rapidly worsening crisis, reproducing and often worsening vast and harmful inequalities between people and countries. The current models are unsustainable, and at a time when global temperatures are rising and divides are deepening, humanity is left in a rapidly worsening situation of its own making, the destruction of the living world, which will make large parts of the earth uninhabitable. Without access to the knowledge, skills or tools to build a better future, local, national and global economies will continue to fail to address the interlinked challenges of systemic racism, inequalities faced by women, the Covid-19 pandemic and the nature and climate emergency. Across the

world, economics students are coming together under the banner of the student movement, Rethinking Economics, to create a better economics – one which can help to create a world where all our children can flourish regardless of their gender, background or birthplace. Drawing on over sixty interviews with students and professionals from identities and backgrounds marginalised in economics and a wide range of global and historical research, this book illustrates the ways in which the discipline is currently not fit for purpose and sets out a vision for how it can be diversified, decolonised and democratised. The struggle to reclaim economics could not be more crucial - our futures depend on it. This book explains how it can be done.

Say to the Sun, "Don't Rise," and to the Moon, "Don't Set" Cambridge English

TERRAINS OF CONSCIOUSNESS emerges from an Indian-German-Swiss research collaboration. The book makes a case for a phenomenology of globalization that pays attention to locally situated socioeconomic terrains, everyday practices, and cultures of knowledge. This is exemplified in relation to three topics: - the tension between 'terrain' and 'territory' in Defoe's 'Robinson Crusoe' as a pioneering work of the globalist mentality (chapter 1) - the relationship between established conceptions of feminism and the concrete struggles of women in India since the 19th century (chapter 2) - the exploration of urban space and urban life in writings on India's capital - from Ahmed Ali to Arundhati Roy (chapter 3).

Cambridge IELTS 10 Student's Book with Answers Routledge

Practicing Caste attempts a fundamental break from the tradition of caste studies, showing the limits of the historical, sociological, political, and moral categories through which it has usually been discussed. Engaging with the resources phenomenology, structuralism, and poststructuralism offer to our thinking of the body, Jaaware helps to illuminate the ethical relations that caste entails, especially around its injunctions concerning touching. The resulting insights offer new ways of thinking about sociality that are pertinent not only to India but also to thinking the common on a planetary basis.

Routledge Handbook of Gender in South Asia Oxford University Press, USA

Geology is an inter-disciplinary science and the advance made in its understanding is based on valuable research contributed from the

other sciences. This has given rise to a host of specialised fields such as environmental geology, marine geology, photogeology and mining geology, to me a few. This book has been written for the first year students of Geology and also for those who have opted for Geology as one of their subjects for competitive examinations such as UPSC, MPSC and others.

Power Generation Technologies University of Illinois Press

“The impressive advances of information and communication technologies (ICT) in some Asian countries have led some people to proclaim a fundamental change in the world economy. It is essential still to study the experience of developing countries thoroughly and critically. The authors and editors have made an admirable contribution to make such an evaluation and fill a big gap in our knowledge. But it is still relatively difficult to find reliable information about the changes taking place in China or any other developing country. One of the many good features of this evaluation is that it takes into account the specific relationship of ICT with the wider social and economic system and the national system of innovation of each country.”

Standards and Quality in Higher Education Archers & Elevators Publishing House

India's multinational call centers and software firms are housed in gleaming corporate towers within lavish economic zones; spaces that have become symbolic of new, sanitized, technology-driven development regimes. However, little is known about the workers who are responsible for the daily maintenance of these multinational corporate spaces. Featuring rich ethnographic narratives combined with institutional and policy analyses, *Low Wage in High Tech* assesses the impact of the growth of multinational technology firms on low-wage service workers. It provides a unique look at the lives and livelihoods of housekeepers, drivers, and security guards who work in these firms. Despite working for wealthy global corporations that are distinctively associated with progress and promise, service employees often work extremely long hours, at low wages, with no health or pension benefits, and few prospects for social or economic mobility as a result. While they may have the hope of joining those included in India's economic miracle, these workers also experience social and economic barriers that continually threaten to perpetuate long-established cycles of poverty. In this sense, they are excluded from the "new India" that their places of

work represent. *Low Wage in High Tech* presents these workers' stories of immobility and exclusion, giving them a long-overdue voice and representation in the research on India's technology boom. *Low Wage in High Tech* is a volume in the series *ISSUES OF GLOBALIZATION: CASE STUDIES IN CONTEMPORARY ANTHROPOLOGY*, which examines the experiences of individual communities in our contemporary world. Each volume offers a brief and engaging exploration of a particular issue arising from globalization and its cultural, political, and economic effects on certain peoples or groups.

Women's Empowerment and Microcredit Programs in India examines the value of microcredit-based self-help groups (SHGs) for women in India and provides an alternative model for women's empowerment programming. The microcredit sector continues to boom globally - with private investors, governments and multilateral financial institutions all investing substantial amounts in self-help group programming. Nowhere is this more evident than in India, where the industry has further been deregulated in recent years. Much of the rationale for increased investment in microcredit is based on the idea that it improves 'women's empowerment'. But is this true? Researchers have fiercely debated the value of microcredit programs for women, with some arguing that it is exploitative, and others contending that it is empowering. This book provides new insights into women's empowerment and microcredit programming, elaborating on the themes of power, dignity, mobility and solidarity. It takes a nuanced view of the complexities surrounding self-help group programming and women's empowerment and argues that the model of microcredit self-help group programming is key to whether it helps or harms women. By focusing on the experiences and voices of microcredit self-help group members in West Bengal, India, this book elaborates on the idea of microcredit models existing on a continuum, from 'smart economics' to more holistic feminist versions of programming. It will be of interest to scholars in development studies, anthropology, sociology, gender studies and public policy and Asian Studies.

Information Resources in Toxicology, Volume 2: The Global Arena Nirali Prakashan

To improve schools we need to improve teachers. This volume

provides recent research evidence that suggests that current education policy is not Promoting Effective Teacher Education And That Teacher Education Policy has: failed to support the formation of professional partnerships in initial teacher education; has almost ignored the induction of newly qualified teachers; and has narrowed in-service education into support for the implementation of central policy.; The evidence gathered in this book is used to argue for new forms of teacher education in every phase, built upon the foundation of professional partnership between schools and institutions of higher education. It is suggested that the funding for such changes could be drawn from less effective forms of school improvement, such as National Curriculum development and school inspection. With the implementation of such changes, it is argued, good quality teacher education programmes would prosper and foster a broad consensus about educational development that is often absent.

Biological Techniques Oxford University Press

Despite spectacular advances, modern medicine faces formidable global challenges in several key areas—notably the persistence of major killer diseases such as malaria, tuberculosis, leprosy, and newer threats including HIV/AIDS, resistant infections, and Ebola. As such, modern medicine has not led to a significant decrease in chronic diseases like diabetes, obesity, and other degenerative and autoimmune diseases. The authors believe that modern medicine needs to experience a paradigm shift, an integration of traditions—in particular from the ancient systems like Ayurveda and Yoga. *Integrative Approaches for Health: Biomedical Research, Ayurveda and Yoga* brings together the basic principles of interdisciplinary systems approach for an evolving construct of future medicine. Such an approach is already emerging at the cutting edge of current research in omics, bioinformatics, computational and systems biology. Several leading institutions of medicine have adopted Yoga and complementary medicine to widen their reach, and deepen effectiveness in therapeutic practices. The amalgam of modern medicine, with its strengths in scientific rigor, blended with the basic principles of life drawn from Ayurveda and Yoga might evolve into a medicine of tomorrow. Integrative approaches are no longer alternative, perhaps taking these approaches is the only possible way to heal our sick planet. This book introduces important trends and tools for biomedical researchers and physicians alike, to innovate the

practice of medicine for the better. Contains a harmonious confluence of ancient and modern concepts, historical perspectives, philosophical underpinnings, and a relevant review of literature supported by worldwide case studies. Provides a critical analysis of ancient wisdom, pointing to potential areas for future research, which provide food for thought for public debate on integrative health care for the twenty-first century. Explains Ayurveda knowledge, and its relevance to drug discovery, nutrition, genomics, epigenetics, regenerative biology, longevity and personalized medicine. Shares Yoga knowledge insights, and explains its relevance to body–mind complex relationships, psychology, neurobiology, immunoendocrinology, bioenergetics, consciousness, and cognitive sciences. Offers illustrations and logic diagrams for enhanced understanding of the concepts presented.

Practicing Caste Frontiers Media SA

Experts often assume that the poor, hungry, rural, and/or precarious need external interventions. They frequently fail to recognize how the same people create politics and knowledge by living and honing their own dynamic visions. How might scholars and teachers working in the Global North ethically participate in producing knowledge in ways that connect across different meanings of struggle, hunger, hope, and the good life? Informed by over twenty years of experiences in India and the United States, *Hungry Translations* bridges these divides with a fresh approach to academic theorizing. Through in-depth reflections on her collaborations with activists, theatre artists, writers, and students, Richa Nagar discusses the ongoing work of building embodied alliances among those who occupy different locations in predominant hierarchies. She argues that such alliances can sensitively engage difference through a kind of full-bodied immersion and translation that refuses comfortable closures or transparent renderings of meanings. While the shared and unending labor of politics makes perfect translation—or retelling—impossible, hungry translations strive to make our knowledges more humble, more tentative, and more alive to the creativity of struggle.

The Republic of India Adonis & Abbey Publishers Ltd

This book makes intelligible the wide range of electricity generating technologies available today, as well as some closely allied technologies such as energy storage. The book opens by

setting the many power generation technologies in the context of global energy consumption, the development of the electricity generation industry and the economics involved in this sector. A series of chapters are each devoted to assessing the environmental and economic impact of a single technology, including conventional technologies, nuclear and renewable (such as solar, wind and hydropower). The technologies are presented in an easily digestible form. Different power generation technologies have different greenhouse gas emissions and the link between greenhouse gases and global warming is a highly topical environmental and political issue. With developed nations worldwide looking to reduce their emissions of carbon dioxide, it is becoming increasingly important to explore the effectiveness of a mix of energy generation technologies. *Power Generation Technologies* gives a clear, unbiased review and comparison of the different types of power generation technologies available. In the light of the Kyoto protocol and OSPAR updates, *Power Generation Technologies* will provide an invaluable reference text for power generation planners, facility managers, consultants, policy makers and economists, as well as students and lecturers of related Engineering courses. · Provides a unique comparison of a wide range of power generation technologies - conventional, nuclear and renewable · Describes the workings and environmental impact of each technology · Evaluates the economic viability of each different power generation system *Terrains of Consciousness* Oxford University Press

Gandhian Engagement with Capital: Perspectives of J C Kumarappa comprehensively presents the Gandhian ideas on economic development and political economy. Within this larger context, it focuses on the towering contributions of J C Kumarappa, the pioneer of the Gandhian model of economic development, and describes, from his standpoint, how the moral and political dispositions of Gandhism amount to a critique of capitalism. The book also covers in detail the major facets of Kumarappa's contribution to Gandhism: developing a non-mechanized, non-capitalist model of industrialization; presenting the holistic development approach; reflecting on the role of the state in facilitating a village-centric economy; and exploring the role of religion in developing the moral foundation of the Gandhian political economy. These reflect the historical context of Kumarappa's scholarship and his deep understanding of the

various dimensions of Gandhian thought. The book highlights the debates within Gandhism and imparts a nuanced understanding of other Gandhian thinkers. Further, it presents several discourses in modern Indian political thought by analysing the interplay of narratives.

Integrative Approaches for Health Jessica Kingsley Publishers
"The Encyclopedia of Library and Information Science provides an outstanding resource in 33 published volumes with 2 helpful indexes. This thorough reference set--written by 1300 eminent, international experts--offers librarians, information/computer scientists, bibliographers, documentalists, systems analysts, and students, convenient access to the techniques and tools of both library and information science. Impeccably researched, cross referenced, alphabetized by subject, and generously illustrated, the Encyclopedia of Library and Information Science integrates

the essential theoretical and practical information accumulating in this rapidly growing field."

Chromatin and Disease University of Illinois Press

Instrumental Lives is an account of instrument making at the cutting edge of contemporary science and technology in a modern Indian scientific laboratory. For a period of roughly two-and-half decades, starting the late 1980s, a research group headed by CV Dharmadhikari in the physics department at the Savitribai Phule University, Pune, fabricated a range of scanning tunnelling and scanning force microscopes including the earliest such microscopes made in the country. Not only were these instruments made entirely in-house, research done using them was published in the world's leading peer reviewed journals, and students who made and trained on them went on to become top

class scientists in premier institutions. The book uses qualitative research methods such as open-ended interviews, historical analysis and laboratory ethnography that are standard in Science and Technology Studies (STS), to present the micro-details of this instrument making enterprise, the counter-intuitive methods employed, and the unexpected material, human and intellectual resources that were mobilised in the process. It locates scientific research and innovation within the social, political and cultural context of a laboratory's physical location and asks important questions of the dominant narratives of innovation that remain fixated on quantitative metrics of publishing, patenting and generating commerce. The book is a story as much of the lives of instruments and their deaths as it is of the instrumentalities that make those lives possible and allow them to live on, even if with a rather precarious existence.
