This definitive work—now extensively revised with virtually all new chapters—has introduced generations of researchers to the psychological processes that underlie social behavior. What sets the book apart is its unique focus on the basic principles that guide theory building and research. Since work in the field increasingly transcends such boundaries as biological versus cultural or cognitive versus motivational systems, the third edition has a new organizational framework. Leading scholars identify and explain the principles that govern intrapersonal, interpersonal, intragroup, and intergroup processes, in chapters that range over multiple levels of analysis. The book's concluding section illustrates how social psychology principles come into play in specific contexts, including politics, organizational life, the legal arena, sports, and negotiation. New to This Edition \*Most of the book is entirely new. \*Stronger emphasis on the contextual factors that influence how and why the basic principles work as they do. \*Incorporates up-to-date findings and promising research programs. \*Integrates key advances in such areas as evolutionary theory and neuroscience.

**The Compassionate Instinct: The Science of Human Goodness** Psychology Press

What role does justice play in the formation of public opinion and the scholarly debates about social problems? Does the perception of injustice force problems to appear on the political agenda? Does the perception of an injustice give momentum to social change? Or are violations of self-interest or threats to one's material welfare the more important factors? Or are empathy-driven concerns for the needy and the disadvantaged motivations to solve societal problems? What is known about the role justice concerns play in leadership? In several chapters of this volume, justice concerns and justice motives are viewed in relation to other concerns and motivations; welfare, self-interest, altruism. It is argued that the consensus of political theorists converges on mutual advantage as the main criterion of acceptable solutions to solving societal problems. In economics, self-interest is considered the driving force and provides the criterion of acceptable solutions. Sociological and social psychological exchange theories share these basic assumptions. Thus, questions are raised and answered concerning how justice and these other important motives appear in the analyses of societal problems and the search for solutions. Moreover, in addition to the issue of conflicting motives—self interest, altruism, justice—it is commonly recognized that the definition of what is just and what is unjust is open to question. In public as well as in scientific dialogues, diverging views about justice have to be integrated or decided upon.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution—and the authors' excitement about it.
