Extension agents from around the country offer practical, informative articles addressing the diseases of crops grown in nurseries. Some introductory pieces address abiotic and biotic causes of disease and eleven general diseases such as Botrytis blight and Verticillium wilt. The diseases to which 64 shade trees, shrubs, ground covers, and subtropical ornamentals are susceptible are then discussed in detail, along with methods for the diseases' control. The remaining 17 articles address aspects of disease management, from an introduction to the management of infectious plant diseases in the nursery to tissue culture of woody plants and regulatory control issues. c. Woody Plants for Landscape Use in the Northeastern

United States Oxford University Press

Garden designers face some daunting questions: How do I begin

the creative process? Where can I find design inspiration? How will I know if my design is successful? If you approach these questions like an artist, with an artist's tools and ways of looking at the world, you will be able to design gardens that combine the unique character of a place with your innermost creative spirit. You'll make inspiring gardens that have real meaning, for yourself as well as others. In this luminous volume, landscape architect and artist W. Gary Smith explores the various means that artists use—including drawing, painting, sculpture, meditation, poetry, and dance—to create personal connections with the landscape that enrich and inform garden design. Part 1 focuses on simple techniques that anyone can use to nurture creativity, unleash the imagination, and get ideas down on paper. Part 2 shows how these techniques have shaped actual design projects—with spectacular results. Throughout, the author's friendly and encouraging voice removes the shroud of mystery surrounding the creative process and shows how even the least artistically inclined can tap into inner resources they never knew they had. Smith's own exuberant sketches and bold paintings illuminate the path from art to landscape. Infectiously engaging and unfailingly inspiring, this eye-opening book deserves to be read and reread by anyone who aspires to master the rich and demanding art of garden design.

Enhanced with up-to-date coverage of additional shrubs, trees, and their cultivars, as well as expanded listings of plants classified by characteristics, *Landscape Plants for Eastern North America* continues to provide all the information necessary for landscape designing in the region. This complete guide

provides a concise description of each plant species' function, adaptability, seasonal interest, growth rate, common problems, maintenance, cultivars, and related species, along with more than 1000 high-quality scale drawings and hundreds of photographs. And Dr. Flint's book goes beyond many works on landscape plants because of its unique focus on the landscape design process: with cross-referencing in more than two dozen categories based on such design criteria as size, site requirements, and soil prerequisites, readers will easily be able to determine which plants are appropriate to their needs. Throughout the book, a variety of illustrations provide quick reference on a range of important considerations. A full-color map represents the hardiness zones of the eastern region, and bar graphs indicate such adaptability considerations as light, wind, soil moisture, and pH requirements. For each primary species, a seasonal clock furnishes a straightforward visual delineation of the duration and intensity of color throughout the year. Encompassing plant life from herbaceous ground covers to large trees, this is a most comprehensive, easy-to-use resource for anyone involved in landscaping in eastern North America.

Nursery Production of Landscape Plants, January 1979-May 1988 Timber Press

This is the November 2017 register of all new ornamental or landscape tree, shrub, conifer, and vine cultivar submitted or registered in the Open Registration Of Cultivars (OROC)(pronounced OH-rock) from 2013 to late 2017. OROC was formed to remedy the lack of an worldwide catalog of new cultivars because existing patent, trademark, and ICRA agencies barely account for 5% of the available new material. By reason,

patented plants are only those likely to be very popular or from larger firms who can pay the free, not collector's items, most university items, nor smaller nurseries.
