**Introduction to ITIL** John Wiley & Sons

The most important characteristic that is needed to be successful in any leadership position – whether it's in business, church, or your community - is the ability to work with people. Relationships are at the heart of every positive human experience. John C. Maxwell, a master communicator and relational expert, makes learning about relationships accessible to everyone in *Winning With People*. Within this book, Maxwell has translated decades of experience into 25 People Principles that anyone can learn. In *Winning With People*, Maxwell divides these principles into sections based off different questions we must ask ourselves such as: Readiness: Are we prepared for relationships? Connection: Are we willing to focus on others? Trust: Can we build mutual trust? Investment: Are we willing to invest in others? Synergy: Can we create a win-win relationship? Each section contains guiding People Principles. Some are intuitive, such as The Lens Principle: Who We Are Determines How We See Others. Others may go against your instincts, such as The Confrontation Principle: Caring for People Should Precede Confronting People. The most sophisticated leaders and salespeople will pick up on skills that will make them even better, and relational novices will learn skills that can transform them into relational dynamos.

Most project managers would agree that every project is unique. But not all project managers would agree that the best way to manage a unique project is unique. Many still cling to the old practice of having a methodology that is applied to all projects. "One size fits all" is still in common use, and this approach has proven to lead to project failure. Flexibility, situational intelligence, and creativity are essential to deliver project success. The need to recognize and master ever-changing requirements and environmental conditions is a tough challenge for professional project managers. The same practices that led to success yesterday may cause failure today. Selecting favorable responses to a given situation is often the most critical factor of the dynamics of success and failure. This book is designed to help project professionals assess a situation, predict the appropriate approach, methodology and achieving styles, and then apply them in a situational fashion. To guide project managers in selecting the appropriate responses, *Situational Project Management (SitPM)* shows how to assess a given project, determine its unique characteristics, and select the appropriate methods to complete the project. With this book, project managers can use SitPM to develop profiles of their projects on the basis of the projects' physical characteristics, the project teams' behavioral characteristics, the enterprise environment, and the market environments receiving project deliverables. These profiles help project managers to determine the appropriate project life cycle approach and leadership style. The book also explores various ways to engage stakeholders on the

basis of a project's SitPM profile. The book's author, Oliver F. Lehmann, has developed a set of templates to apply SitPM in practice. It can be downloaded from [www.oliverlehmann.com/SitPM/Templates.zip](http://www.oliverlehmann.com/SitPM/Templates.zip).
