Annual Reports on NMR Spectroscopy
Elsevier

The first three chapters of this latest volume, Annual Reports in Organic Synthesis (2003), are organised by

reaction type. Later chapters deal with methods of synthesizing heterocyclic systems, the use of protecting groups and synthetically useful transformations. The final chapters deals with reviews and are divided by specific topics. Clearly organised review of synthetically useful information. Emphasize on rapid visual retrieval Extensive use of

references Beneficial to nearly all organic chemists, both specialists and nonspecialists in synthesis

 Annual Reports in Inorganic and General Syntheses-1973 presents an organized annual summary of synthetic developments in inorganic chemistry and its related areas. The book covers the synthetic aspects and structural or mechanistic features of elements, including the main group hydrides, alkali and alkaline earth elements, boron, aluminium, gallium, indium, thallium,

silicon, germanium, tin, and lead, nitrogen, phosphorus, arsenic, antimony, bismuth, chalcogens, halogens and pseudohalogens, and noble gases. The text also discusses the synthetic aspects and structural or mechanistic features of elements of yttrium, scandium, lanthanides, and actinides, titanium, zirconium, hafnium, vanadium, niobium, tantalum, chromium, molybdenum, tungsten, manganese, technetium, rhenium, iron, cobalt, and nickel. The chemistry of ruthenium, osmium, rhodium, iridium, palladium, platinum, copper, silver, gold, zinc, cadmium, and mercury is also encompassed. The book concludes by describing the synthesis and structures of metalloporphyrins. Chemists, chemistry students, and people working in chemical laboratories

will find the book invaluable.

This book provides a critical analysis of merger control regimes in the former socialist countries with small market economies, looking at the unique challenges facing these economies. The book will analyse the merger control regimes in Estonia, Latvia and Lithuania, Slovenia and Slovakia.

EC Merger Regulation in Small

Market Economies Academic Press

Annual Reports in Medicinal Chemistry

provides timely and critical reviews of important topics in medicinal chemistry

together with an emphasis on emerging topics in the biological sciences, which

are expected to provide the basis for

entirely new future therapies. Sections I-IV are disease-orientated and generally

report on specific medicinal agents.

Sections V-VI continue to emphasize

important topics in medicinal chemistry, biology and drug design. In addition to the chapter reviews, a comprehensive set of indices has been included to enable the reader to easily locate topics in Volumes 1-38 of this series.

SIMBIOS Project 2003 Annual Report

Annual Reports on Fermentation Processes, Volume 1 furnishes a critical account of significant developments concerning fermentation processes. This book discusses the mutation, selection, and optimization of mutagenesis; fermentation substrates; and published accounts of computer-coupled fermentation systems. The waste materials as SCP substrates, immobilized cell processes, and microbial transformations of organic compounds

are also elaborated. This publication likewise covers the microbiological and enzymatic conversion of β -lactam antibiotics, microbiological production of chemical feedstocks, and aeration systems and their performance. Other topics include the toxicology and regulation of enzyme use, general considerations of immobilized enzyme systems, mutational biosynthesis, and biotransformations and the role of precursors. This volume is a good reference for students and researchers interested in fermentation research and developments.

Annual Report Academic Press

These indexes are valuable volumes in the series, bringing together what has been published over the past 38 volumes. They include a preface by the

editor of the series, an author index, a subject index, a cumulative list of chapter titles, and listings of contents by volume.
