Emerging Infectious Diseases Springer Nature

This book serves as a comprehensive reference for the basic principles of caring for older adults, directly corresponding to the key competencies for medical student and residents. These competencies are covered in 10 sections, each with chapters that target the skills and knowledge necessary for achieving competency. Each of the 45 chapters follow a consistent format for ease of use, beginning with an introduction to the associated competency and concluding with the most salient points for mastery. Chapters also includes brief cases to provide context to the clinical reasoning behind the competency, strengthening the core understanding necessary to physicians of the future. Written by expert educators and clinicians in geriatric medicine, *Geriatric Practice* is key resource for students in geriatric medicine, family and internal medicine, specialties, hospice and nursing home training, and all clinicians studying to work with aging patients.

Fundamentals of HIV Medicine 2021 WIPO

In this history of extinction and existential risk, a Newsweek and Bloomberg popular science and investigative journalist examines our most dangerous mistakes -- and explores how we can protect and future-proof our civilization. *End Times* is a compelling work of skilled reportage that peels back the layers of complexity around the unthinkable -- and inevitable -- end of humankind. From asteroids and artificial intelligence to volcanic supereruption to nuclear war, veteran science reporter and TIME editor Bryan Walsh provides a stunning panoramic view of the most catastrophic threats to the human race. In *End Times*, Walsh examines threats that emerge from nature and those of our own making: asteroids, supervolcanoes, nuclear war, climate change, disease pandemics, biotechnology, artificial intelligence, and extraterrestrial intelligence. Walsh details the true probability of these world-ending catastrophes, the impact on our lives were they to happen, and the best strategies for saving ourselves, all pulled from his rigorous and deeply thoughtful reporting and research. Walsh goes into the room with the men and women whose job it is to imagine the unimaginable. He includes interviews with those on the front lines of prevention, actively working to head off existential threats in biotechnology labs and government hubs. Guided by Walsh's evocative, page-turning prose, we follow scientific stars like the asteroid hunters at NASA and the disease detectives on the trail of the next killer virus. Walsh explores the danger of apocalypse in all forms. In the end, it will be the depth of our knowledge, the height of our imagination, and our sheer will to survive that will decide the future.

Patient Centered Neuroimaging in the Emergency Department, An Issue of Neuroimaging Clinics of North America "O'Reilly Media, Inc." A year after the first case was confirmed in Wuhan COVID-19 is proving hard to suppress even, while the emergence of more transmissible variants of the variant poses new challenges to the containment of the disease globally. The economies of the region began to bounce back in the second half of 2020. However, only China and Vietnam have followed a V-shape recovery path with output surpassing pre-COVID-19 levels. Most of the other countries have not seen a full-fledged recovery in terms of either output or growth momentum. Economic performance across countries continues to depend on (i) the efficiency with which the virus is contained; (ii) the ability to take advantage of the revival in international goods trade; and (iii) the capacity of governments to provide fiscal and monetary support. China and Vietnam are expected to enjoy strong growth in 2021, whereas other economies in the region will grow more gradually. Many economies, especially in the Pacific islands are not expected to reach pre-COVID-19 levels of output until 2022 or later. Governments in the region need to work cooperatively to address three key issues: (i) a regional and global distribution of vaccines that minimizes the risk of a continued spread of COVID-19 and its variants; (ii) continue to provide economic support to their economies while carefully evaluating the trade-offs between the need for further stimulus and debt sustainability; and (iii) enact policies and prioritize investments that protect against climate risk to ensure sustainable economic growth.

The book surveys common complications in the procedure of dialysis, including those due to inherent complexities related to advanced kidney disease and the disorders that cause it. The chapters review the pathophysiology or mechanisms of each complication, how it can be recognized and managed, and more importantly how it can be prevented. The text also addresses whether the complication is due to conditions associated with kidney disease, such as frailty and muscle weakness, or whether the complication occurs as the consequence of treatment. The complications addressed include infections, AV access and catheter issues, problems in procedure, coagulation-related disorders, and falls, among others. Written by experienced dialysis experts, this book is a resource and learning tool for anyone involved in caring for patients undergoing renal replacement therapy.

New Insights into Autoinflammatory Diseases: From Bench to Bedside Hachette Books

This book sheds new light on the diagnosis and treatment of Heart Failure in adult patients with congenital heart disease. This is a rapidly growing clinical issue for this group of patients and the clinical teams caring for them. The book highlights the major clinical dilemmas in diagnosing heart failure in patients with a lifelong cardiac condition and describes in details the utility of biomarkers, complex imaging and functional tests, e.g. the

cardiopulmonary exercise testing. A step-wise approach to treatment is described from drug therapy through to devices and transplantation. As such, the book offers an essential guide for cardiologists and cardiac surgeons looking to optimize the management of patients with delicate physiology and complex disease.

Audit and Accounting Guide - Depository and Lending Institutions Springer

The purpose of this volume, bringing together key actors of the well-being community, including scholars and policy-makers, is to advance the understanding and undertaking of the well-being transition away from growth and toward resilience and sustainability, at a time when this progress has become a vital necessity. A decade after the publication of the Stiglitz Report (2009), alternative visions to GDP and growth, that flourished in the 1970s, have re-emerged from all corners of the world, at all levels of governance. Yet, GDP and growth remain very much dominant in defining public policies, influencing businesses and shaping imaginaries. This book moves forward on two urgent tasks that stand before us in order to make progress in the well-being transition: first, connecting well-being to sustainability in a consistent framework highlighting their complementarity, using health as a pivot; second, operationalizing well-being indicators, i.e. integrating them into policy at all levels of governance.

The shocking truth about where the markets are headed and why owning physical gold—not paper assets—is a far better strategy to building real wealth. An indispensable resource for the everyday investor, *Gold Is A Better Way* turns the strategies recommended by Wall Street on their head and makes the case for a return to sound investing. Adam Baratta strips away all the confusion and complexities surrounding investing and breaks down investment concepts and the simple fundamentals driving markets. He provides a roadmap for how to win at the game of investing and, more importantly, explains the “why” so readers can continue to win. Everyday investors gain tools that allow them to know with certainty they are making sound investment decisions, as well as an understanding of where to diversify investments that have historically performed well. There is a massive environmental shift happening in financial markets. Interest rates are rising and what has been very easy for investors in the past is about to become very hard. Everything people think they know about investing is being turned on its head. It's time to change investing behavior. “A fresh new voice in the world of gold . . . Baratta's book and cutting edge platform make the undeniable case why gold demands consideration in every portfolio.”

This book focuses on the rapidly maturing solar photovoltaic (PV) industry, which is achieving an ever-increasing share of U.S. and global power production. There is a growing need for all stakeholders – owners, maintenance technicians, utilities, and installers – to fully understand the operations and maintenance of PV systems, and how to monitor and diagnose systems post installation. Recognizing this need, this book covers monitoring and diagnostic techniques and technologies, including how to identify the causes of poor performance, and measure and verify power production. Drawing on global case studies, it details how to achieve optimal PV power output in the field through an overview of basic electrical, the solar PV module and Balance of System, and processes and software for monitoring, measurement, and verification. It also provides an overview of the North American Board of Certified Energy Practitioner's (NABCEP) new PV System Inspector credential, which will be outlined in the final chapter. Equipping the reader with the knowledge and confidence required to maximize the output of solar PV installations, *Solar Photovoltaics Power Optimization* will be an essential resource for PV practitioners and students.
