 After Southeast Asia, analysts and force planners came to the realization that there was a fundamental difference between search and rescue (SAR) in a permissive area and in an area that was not permissive (i.e., under enemy control). This second condition is now called combat search and rescue or CSAR. At the time of Desert Storm, the two forms of rescue were defined thusly:  
 Search and Rescue (SAR): Use of aircraft, surface craft, submarines, personnel, and equipment to locate and recover personnel in distress on land or at sea. Combat Search and Rescue (CSAR): A specialized SAR task performed by rescue-capable forces to effect recovery of distressed personnel from hostile territory during contingency operations or wartime.2 The development of this rescue capability has been well established. Dr. Robert Futrell documented our efforts in Korea in *The United States Air Force in Korea, 1950-1953*. His work was followed by Dr. Earl Tilford's *Search and Rescue in South east Asia*, which eloquently chronicled the heroic efforts of the rescue crews in that conflict who brought back literally thousands of airmen. It extensively documented what is now considered the "golden age" of rescue. This work is meant to follow in those traditions and will focus on our CSAR efforts in the Persian Gulf War of 1991, or more specifically, the period of Operation Desert Storm, 17 January to 28 February 1991. Overall, CSAR in Desert Storm appears to have been a mixed bag. Because of advances in precision weaponry, Global Positioning System (GPS) technology, countermeasures, and training, relatively few coalition aircraft were shot down. Forty-three coalition aircraft were lost in combat, most over high-threat areas. Eighty-seven coalition airmen, soldiers, sailors, and marines were isolated in enemy or neutral territory. Of that total, 48 were killed, one is still listed as missing, 24 were immediately captured, and 14 were exposed in enemy territory. Of those who survived, most landed in areas controlled by enemy troops. Of the

few actually rescueable, six were not rescued for a variety of reasons, but primarily because of limitations in CENTAF's ability to locate them accurately and in a timely manner.

The *Air Force System Safety Handbook* was prepared as a resource document for program office system safety managers and system safety engineers. It is not designed to answer every question on the topic of system safety nor is it a cookbook that guarantees success. The handbook provides considerable insight to the general principles, objectives, and requirements of applying system safety concepts to the Air Force system acquisition and logistical support processes. Programs vary greatly in their scope and complexity, requiring a tailored system safety effort. Assigned to this difficult task are military and government personnel with varied education and experience backgrounds. These system safety practitioners need a comprehensive understanding of the system safety process and the complexities of applying it to a given program. This handbook will assist in providing much of the necessary information but additional, more detailed guidance will be required from the program office and their higher headquarters system safety experts. The ultimate objective of any organization within the Air Force is maximizing combat capability. One element in this maximizing process is protecting and conserving combat weapon systems and their support equipment. Preventing mishaps and reducing system losses is one important aspect of conserving these resources. System safety contributes to mishap prevention by minimizing system risks due to hazards consistent with other cost, schedule, and design requirements. The fundamental objective of system safety is to identify, eliminate or control, and document system hazards. 1.0 Introduction To System Safety \* 2.0 System Safety Policy And Process \* 3.0 Risk Assessment \* 4.0 System Safety Program \* 5.0 System Safety Program Plan (Sspp) \* 6.0 Other Management Tasks (Ref 30) \* 7.0 Design And Integration Tasks \* 8.0 Design Evaluation, Compliance, And Verification \* 9.0 Analysis Techniques \* 10.0 System Safety Life-Cycle Activities \* 11.0 Program Office System Safety \* 12.0 Contracting For System Safety \* 13.0 Evaluating Contractor System Safety \* 14.0 Facilities System Safety \* 15.0 Supplementary Requirements \* 16.0 Nuclear Safety \* 17.0 Explosives Safety \* 18.0 System Safety In Logistics \* 20.0 Test And Evaluation Safety

Today's Air Force commanders face a wide-range of issues, many of which involve complex statutes, laws, regulations, and rules. Our commanders must deal with challenging legal matters ranging from military justice to environmental law to operations law. To assist commanders with these formidable tasks, we've created this helpful volume, *The Military Commander and the Law*. This deskbook contains a series of papers that give commanders a head start on the wide array of issues they will handle. Each article is intended to give a commander the basics in the law on any given subject. The papers are not intended to make the commander a legal expert or to resolve specific questions relating to any unique problem. Lance W.  This Handbook is designed to assist Army Commanders in taking proper immediate action when faced with a variety of legal issues that might arise during your command. The purpose of your actions should be to preserve the legal situation until you can consult with your servicing Judge Advocate. However, like most aspects of your command responsibilities, you can fail if you just wait for things to come to you. You need to be proactive in preventing problems before they occur. In the legal arena, this means establishing and enforcing high standards, ensuring your Soldiers are fully aware of those standards and properly trained to comply with them. You must also properly train your Soldiers on all Army policies and higher level command standards so that they also understand and comply with them. Soldiers must also be well-versed in the Army Values and be able to apply those values to real-world situations, which will usually keep them well within legal bounds. Topics

If you like this book (or the Kindle version), please leave positive review. This update to UFC 1-200-01 represents the Tri-Services effort to bring uniformity to the military use of non-government model building codes. Technical representatives of each of the four Services developed requirements in this document to implement the use of the 2015 International Building Code (IBC) consistent with the scope of current military requirements and procedures. This UFC applies to the design and construction of new and renovated Government-owned facilities for the Department of Defense (DoD). It is applicable to all methods of project delivery and levels of construction. Includes a list of applicable NIST cybersecurity publications for consideration. Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy).

Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. The story of special air warfare and the Air Commandos who served for the ambassadors in Laos from 1964 to 1975 is captured through extensive research and veteran interviews. The author has meticulously put together a comprehensive overview of the involvement of USAF Air Commandos who served in Laos as trainers, advisors, and clandestine combat forces to prevent the communist takeover of the Royal Lao Government. This book includes pictures of those operations, unveils what had been a US government secret war, and adds a substantial contribution to understanding the wider war in Southeast Asia.

This manual is intended for use by all Army crewmembers in meeting requirements set forth in Army Regulation 95-1, Training Circular 1-210, and other appropriate aircrew training manuals. Lessons learned from previous military conflicts and recent contingency operations have caused changes in Army aviation doctrine. With the development of more sophisticated aircraft and weapons systems, Army crewmembers must be capable of operating these systems around the clock, in austere

environments, and under adverse conditions. The hazards of stress and fatigue in combat operations and concept of operations will eventually take a toll in aircrew performance and could jeopardize mission accomplishment unless crewmembers are trained to recognize and understand these hazards. Proper training prepares crewmembers and prevents stress and fatigue from reducing mission effectiveness, thereby increasing their chances of survival. Training Circular 3-04.93 provides crewmembers with an understanding of the physiological responses that can occur in the aviation environment. It also describes the effects of the flight environment on individual mission accomplishment. In addition, this publication outlines essential aeromedical training requirements (in Chapter 1) that assist commanders and flight surgeons in conducting aeromedical education for Army crewmembers. Subject areas addressed are by no means all inclusive but are presented to assist crewmembers in increasing performance and efficiency. This publication applies to the Active Army, the Army National Guard/Army National Guard of the United States, and the United States Army Reserve unless otherwise stated.

The Military Commander and the Law is a publication of The Judge Advocate General's School. This publication is used as a deskbook for instruction at various commander courses at Air University. It also serves as a helpful reference guide for commanders in the field, providing general guidance and helping commanders to clarify issues and identify potential problem areas. As with any publication of secondary authority, this deskbook should not be used as the basis for action on specific cases. Primary authority, much of which is cited in this edition, should first be carefully reviewed. Finally, this deskbook does not serve as a substitute for advice from the staff judge advocate.

The First Additional Protocol to the Geneva Conventions ("AP I") is central to the modern law of war, widely referred to as international humanitarian law outside the United States. It updates the Geneva Conventions for protection of war victims and combines them with new or updated rules governing hostilities and the use of weapons found in the Hague Regulations Respecting the Laws and Customs of War. Due to its comprehensive nature and adoption by a majority of States, AP I is frequently cited as the source for law of war rules by attorneys and others interested in protecting humanitarian interests. The challenge for United States attorneys, however, is that their country is not a party to AP I and has been a persistent objector to many of its new rules. While the United States signed the First Additional Protocol to the Geneva Conventions in 1977, it determined, after 10 years of analysis, that it would not ratify the protocol. President Reagan called AP I "fundamentally and irreconcilably flawed." Yet, as will be detailed throughout this guide, United States officials have declared that aspects of AP I are customary international law. Forty years after signing AP I, and 30 years after rejecting it, the United States has never presented a comprehensive, systematic, official position on the protocol. Officials from the United States Departments of Defense and State have taken positions on particular portions of it. This guide attempts to bring those sources together in one location.

First published in 2003. The NATO-led Operation Allied Force was fought in 1999 to stop Serb atrocities against ethnic Albanians in Kosovo. This war, as noted by the distinguished military historian John Keegan, "marked a real turning point . . . and proved that a war can be won by airpower alone." Colonels Haave and Haun have organized firsthand accounts of some of the people who provided that airpower—the members of the 40th Expeditionary Operations Group. Their descriptions—a new wingman's first combat sortie, a support officer's view of a fighter squadron relocation during combat, and a Sandy's leadership in finding and rescuing a downed F-117 pilot—provide the reader with a legitimate insight into an air war at the tactical level and the airpower that helped convince the Serbian president, Slobodan Milosevic, to capitulate.

This book surveys the entire field of body composition as it relates to performance. It includes a clear definition of terminology and a discussion of the various methods for measuring body composition. The authored papers represent a state-of-the-art review of this controversial field and address questions such as: What is a better measure of body composition—body fat or lean body mass? Does being overweight for one's height really affect performance? The book also addresses the issue of physical appearance as it relates to body fitness and performance. It includes an in-

depth discussion of many of the topics of interest to those involved in sports medicine and exercise physiology.
