MARTINEZ GOODMAN

Proceedings of the 2016 International Conference on Applied Economics (ICOAE) Springer

This handbook covers a wide spectrum of issues relating to small states. Chapters in the volume have been grouped under the three main themes of economic, social and environmental issues. The economics sections include chapters dealing with trade, finance and regulatory frameworks, while the social theme covers health,

migration, population ageing, as well as overall social wellbeing. The environmental theme examines matters such as measuring environmental performance, natural disasters, the ocean economy, and the validity of the Sustainable Development Goals. One major issue is the definition of small states. As this volume demonstrates, generally speaking, population is used to measure country size in the literature. However, it clearly emerges that there is no real consensus as to the population cut-off point that distinguishes small states from large ones. While the approaches

taken by the authors vary, in all cases the chapters draw practical policy implications for small states. The book can therefore be considered as a wide-ranging depository of information on small states with the aim of deriving policy prescriptions, and thus as an excellent resource for academics, students and policymakers.

[Climate Change in Sub-Saharan Africa Fragile States: Evidence from Panel Estimations](#) Emerald Group Publishing

This is the first volume to examine and shed significant light on the issues, challenges and prospects presented by foreign direct investment (FDI) in tourism -

a topic of increasing relevance in light of the covid-19 pandemic and economic consequences. This book addresses the need to examine the TFDI phenomenon considering resilient tourism development approaches and includes discussion on impacts of a rapidly evolving global pandemic on tourism. Recognising that its impact on tourism has only just begun, the book includes early estimates of the damage to the tourism economy and TFDI over 2020 and beyond. It considers how the COVID-19 pandemic may change society, the economy, and tourism, and how some of the key research needs to understand these changes and contribute to a more sustainable post-pandemic tourism sector. Through a collection of chapters focusing on principles, practices and a diverse range of destination case studies, the book considers TFDI from the economic, social and environmental and regulatory perspectives. Thus, the book will advance understanding of the positive and negative impacts of TFDI as well as how emerging problems and wider implications for local economies and communities can be managed more sustainably, while also discussing the

transformative opportunities offered by TFDI regarding key economic, social and environmental issues. This will be essential reading for upper-level students and researchers in the field of tourism development.

Proceedings of the Third International Conference on Smart Computing and Informatics, Volume 2 Emerald Group Publishing

From Robin Sickles: As I indicated to you some months ago Professor William Horrace and I would like Springer to publish a Festschrift in Honor of Peter Schmidt, our professor. Peter's accomplishments are legendary among his students and the profession. I have a bit of that student perspective in my introductory and closing remarks on the website for the conference we had in his honor this last July. I have attached the conference program from which selected papers will come (as well as from students who were unable to attend). You will also find the names of his students (40) on the website. A top twenty economics department could be started up from those 40 students. Papers from some festschrifts have a thematic link among

the papers based on subject material. What I think is unique to this festschrift is that the theme running through the papers will be Peter's remarkable legacy left to his students to frame a problem and then analyze and examine it in depth using rigorous techniques but rarely just for the purpose of showcasing technical refinements per se. I think this would be a book that graduate students would find invaluable in their early research careers and seasoned scholars would find invaluable in both their and their students' research.

Transformation
Dynamics of Knowledge Society Transformation
Global Trade in the Emerging Business Environment explores global trade dynamics in the emerging business environment. Globalization, technological advancements, Industry 4.0, China's Belt and Road Initiative, and the COVID-19 pandemic are changing the global trade ecosystem. Companies and countries need

to evaluate these rapid changes and adjust their respective business strategies and policy formulations. This book discusses such strategies and how firms and countries can reposition themselves within the current environment.

Quantitative Methods for Economics and Finance Springer

How can Turkey increase its medium- and long-term growth potential? Despite episodes of fast growth, this has become a vital question for the Turkish economy, in order to avoid being stuck in a middle-income trap. There has been an increase in the number of studies presenting growth in Turkey and quantifying the sources of economic growth, however, due to the difference in the main underlying assumptions and the time period covered in these studies, the results differ. The second strand of literature on growth in Turkey identifies the relative underperformance of the Turkish economy by developing models with microeconomic foundations. Given the fact that there are a large number of studies investigating the macro dynamics of growth in Turkey, the book's unique focus on the "neglected" issues in growth discussions closes the

gap in the existing literature. It addresses the micro, macro, regional, and gender aspects, the environment-energy-growth nexus, as well as the microeconomic dynamics of growth. It also analyses the other significant determinants of long run growth in Turkey such as import dependency and saving-investment decision. The authors provide a macro overview of all of the precluded subjects in order to evaluate them in relation to one other, as well as to derive policy conclusions from them. This book primarily targets academics as well as graduate and undergraduate social sciences and humanities students both in Turkey and other countries. It is also a must read for researchers and policy makers not only in Turkey but also in other developing economies and is of interest to specialists of non-governmental and non-profit organizations.

Public Policy, Culture, and Economic Development International Monetary Fund

Economic, social, political, and cultural institutions, and institutional change reflect shared journeys of humanity throughout history. This edited volume

explores dynamics, trends, and implications of institutional change in emerging markets, by focusing on theories, concepts, and mechanisms of institutional development. Presenting research by eminent scholars and experts engaged in education and research, they address and discuss the most recent issues in the field, reveals new insights into the dynamics of institutional change for researchers interested in development of new theories and comparative studies, especially in the era of emerging markets. Topics range from dynamics of institutional change and development within the Group of Twenty (G20), and the European Union with an assessment of Brexit impact, to institutional quality measurement, public administration reforms, as well as emergent topics such as the effects of energy and globalization. It provides new international business theories, and sheds light on the way to global peace by producing a better understanding of the dynamics of historical change. The book is intended for a wide range of global audience, and should serve as a useful reference in education and research, offering

innovative and productive discussions, as well as satisfy scholarly and intellectual interests, regarding institutional development and a broad spectrum of its interactions with functioning of markets and economies.

Studies in International Economics and Finance Oxford University Press

This edited collection seeks to address and analyse the ramifications of terrorism and terrorist activities at a world-level, with a specific focus on the economies and political systems in the Afro-Asian regions.

Robustness in Econometrics Academic Press

This book discusses market microstructure environment within the context of the global financial crisis. In the first part, the market microstructure theory is recalled and the main microstructure models and hypotheses are discussed. The second part focuses on the main effects of the financial downturn through an examination of market microstructure dynamics. In particular, the effects of market imperfections and the limitations associated with microstructure models are discussed. Finally, the new regulations and recent developments for financial markets

that aim to improve the market microstructure are discussed. Well-known experts on the subject contribute to the chapters in the book. A must-read for academic researchers, students and quantitative practitioners.

Market Microstructure and Nonlinear Dynamics Springer Nature

Since the 1970s, globalization has created an economic environment of interdependency between nations. Now, many countries in European and the MENA (Middle East and Northern Africa) regions must grapple with the need to increase public revenue while maneuvering through a global “race-to-the-bottom” tax competition. The Handbook of Research on Public Finance in Europe and the MENA Region explores economic development and public finance by providing critical insight into the use of public finance and policy and illuminating the intricacies of these topics through discussion of theory, empirical work, and policy objectives. This book is ideally designed for business professionals, policy makers, financiers, students and researchers in the fields of public policy and economics.

Economics RED'SHINE Publication. Pvt. Ltd.

This volume presents current developments in the fields of banking and finance from an international perspective. Featuring contributions from the 4th International Conference on Banking and Finance Perspectives (ICBFP), this volume serves as a valuable forum for discussing current issues and trends in the banking and financial sectors, especially in light of the global economic challenges triggered by financial institutions. Using the latest theoretical models, new perspectives are brought to topics such as international banking and finance, Islamic banking, fintech, and corporate finance. Offering an opportunity to explore the challenges of a rapidly changing industry, this volume will be of interest to academics, policy makers, and scholars in the fields of banking, insurance, and finance.

Applications International Monetary Fund
The Economics and Econometrics of the
Energy-Growth Nexus recognizes that
research in the energy-growth nexus field
is heterogeneous and controversial. To
make studies in the field as comparable as
possible, chapters cover aggregate energy
and disaggregate energy consumption and
single country and multiple country
analysis. As a foundational resource that
helps researchers answer fundamental
questions about their energy-growth
projects, it combines theory and practice
to classify and summarize the literature
and explain the econometrics of the
energy-growth nexus. The book provides
order and guidance, enabling researchers
to feel confident that they are adhering to
widely accepted assumptions and
procedures. Provides guidance about
selecting and implementing econometric
tools and interpreting empirical findings
Equips researchers to get clearer pictures
of the most robust relationships between
variables Covers up-to-date empirical and
econometric methods Combines theory

and practice to classify and summarize the
literature and explain the econometrics of
the energy-growth nexus

**The Dynamics of Growth in Emerging
Economies** Springer

Fragile states are often mired in civil
conflict. This volume focuses on the
relationship between conflict and state
stability and illustrates the causes and
effects of fragile states on neighbouring
countries and the global community.

**Applied Economic Forecasting using
Time Series Methods** Springer Nature

The book provides a new
conceptualisation of inflation in
underdeveloped economies, through Sri
Lanka's historical experience. It outlines a
general theory of nationalisms in their
diverse manifestations across the world,
within a historical perspective of capitalist
development and underdevelopment. The
book, therefore, seeks to capture the
production mode holistically, within both
its infrastructural and superstructural
levels probing their interactions. The
theoretical structure through which
inflation is analysed synthesises the
theory of unproductive labour and Marxian
theory of prices of production with labour

surplus theory of late Dr. S. B. D. De Silva
in the context of underdevelopment. In
this light, Professor David Laibman's
Allocation Problem is resolved within a
Marxist framework to provide an
operational significance to the theory and
its application. In the same vein the book
also provides a new theoretical
interpretation of Sri Lanka's historical
development from the British period
onwards through application of theories of
capitalist development and surplus labour.

This book presents high-quality papers
from the Third International Conference on
Smart Computing and Informatics (SCI
2018–19), organized by the School of
Computer Engineering and School of
Computer Application, Kalinga Institute of
Industrial Technology Deemed to be
University, Bhubaneswar, from 21 to 22

December 2018. It includes advanced and multi-disciplinary research on the design of smart computing and informatics, focusing on innovation paradigms in system knowledge, intelligence and sustainability that have the potential to provide realistic solutions to various problems in society, the environment and industry. The papers featured provide a valuable contribution to the deployment of emerging computational and knowledge transfer approaches, optimizing solutions in varied disciplines of science, technology and health care.

A Guide to Econometric Methods for the Energy-Growth Nexus Springer Nature

This book presents recent research on robustness in econometrics. Robust data processing techniques – i.e., techniques that yield results minimally affected by outliers – and their applications to real-life economic and financial situations are the main focus of this book. The book also discusses applications of more traditional statistical techniques to econometric problems. Econometrics is a branch of economics that uses mathematical (especially statistical) methods to analyze economic systems, to forecast economic

and financial dynamics, and to develop strategies for achieving desirable economic performance. In day-by-day data, we often encounter outliers that do not reflect the long-term economic trends, e.g., unexpected and abrupt fluctuations. As such, it is important to develop robust data processing techniques that can accommodate these fluctuations.

Economic, Social and Environmental Issues Springer

The World Health Organization confirmed COVID-19 a pandemic on March 11, 2020, causing vast impact on international economy. The coronavirus pandemic has given rise to an unprecedented global health and economic crises. Apart from the toll of early deaths, economic activities have been stalled and stock markets have tumbled, while a wide range of energy markets — including oil, gas and renewable energy — have been severely affected. This crisis stressed the critical value of the health care infrastructure and electricity infrastructure. In view of the above, while governments and policy makers respond to these interlinked crises, they must not lose sight of a major challenge of our time:

clean energy transitions. The pandemic has continued to slow down the recovery of economic activities and consumption due to combination of many factors such as economic recession, expensive storage, warm climate, and enormous uncertainty. Mitigation and adaptation policies are crucial to overcoming the crisis. The commodity futures market will depend on the effectiveness of decision-makers' policies in containing the COVID-19 outbreak and reducing the negative effect of the pandemic on economic activities. This book seeks to throw light on the adverse effects of COVID-19 through enhanced scientific and multi-disciplinary knowledge. The chapters in the book show that the energy, stock, crypto-currencies markets are vulnerable to the surge in coronavirus deaths.

Dynamics of Knowledge Society

Transformation Oxford University Press
Economic forecasting is a key ingredient of decision making both in the public and in the private sector. Because economic outcomes are the result of a vast, complex, dynamic and stochastic system, forecasting is very difficult and forecast errors are unavoidable. Because forecast

precision and reliability can be enhanced by the use of proper econometric models and methods, this innovative book provides an overview of both theory and applications. Undergraduate and graduate students learning basic and advanced forecasting techniques will be able to build from strong foundations, and researchers in public and private institutions will have access to the most recent tools and insights. Readers will gain from the frequent examples that enhance understanding of how to apply techniques, first by using stylized settings and then by real data applications--focusing on macroeconomic and financial topics. This is first and foremost a book aimed at applying time series methods to solve real-world forecasting problems. Applied Economic Forecasting using Time Series Methods starts with a brief review of basic regression analysis with a focus on specific regression topics relevant for forecasting, such as model specification errors,

dynamic models and their predictive properties as well as forecast evaluation and combination. Several chapters cover univariate time series models, vector autoregressive models, cointegration and error correction models, and Bayesian methods for estimating vector autoregressive models. A collection of special topics chapters study Threshold and Smooth Transition Autoregressive (TAR and STAR) models, Markov switching regime models, state space models and the Kalman filter, mixed frequency data models, nowcasting, forecasting using large datasets and, finally, volatility models. There are plenty of practical applications in the book and both EViews and R code are available online at authors' website.

Keeping Financial Crisis in Context Academic Press

This paper studies the long-run impact of public debt expansion on economic growth and investigates whether the debt-growth relation varies with the level of

indebtedness. Our contribution is both theoretical and empirical. On the theoretical side, we develop tests for threshold effects in the context of dynamic heterogeneous panel data models with cross-sectionally dependent errors and illustrate, by means of Monte Carlo experiments, that they perform well in small samples. On the empirical side, using data on a sample of 40 countries (grouped into advanced and developing) over the 1965- 2010 period, we find no evidence for a universally applicable threshold effect in the relationship between public debt and economic growth, once we account for the impact of global factors and their spillover effects. Regardless of the threshold, however, we find significant negative long-run effects of public debt build-up on output growth. Provided that public debt is on a downward trajectory, a country with a high level of debt can grow just as fast as its peers in the long run.
