The aim of this book is to present a concise yet instructive overview of the most common interventional and therapeutic gastrointestinal endoscopic procedures. Although there exists a large amount of literature dealing with therapeutic endoscopy, this publication stands out for several reasons: To begin with, it has been written by a highly selected group of international experts who contribute their own tried and tested tips and tricks. The various techniques are

described in a homogeneous fashion, making it easy for the endoscopist to single out the important aspects for his or her own practice. Moreover, the data presented follows evidence-based guidelines, but does not inundate the reader with confusing facts and numbers. Finally, the book is illustrated like an atlas, featuring real-life pictures enhanced by explanatory drawings and algorithms. This textbook is directed at residents, fellows, gastroenterologists and surgeons interested in therapeutic endoscopy. As the majority of the procedures described are classics that have stood the test of time, it will be a useful companion for many years to come.

**A Text and Atlas** Mosby Incorporated  
The second edition of this atlas has been extensively revised to provide an up-to-date and comprehensive overview of therapeutic gastrointestinal endoscopy for upper and lower gastrointestinal diseases. The coverage ranges from basic but highly effective procedures like cold snare polypectomy and variceal ligation to sophisticated procedures such as peroral endoscopic myotomy and endoscopic submucosal dissection. New instruments, for example over-the-scope clips and various stents, are introduced in the relevant chapters. Furthermore, several chapters have been added to cover cutting-edge technologies for endoscopic treatment of complex conditions, including refractory gastroesophageal reflux disease and duodenal neoplasia. Many pictures have been exchanged for newer ones, most of them high-definition endoscopy photos, and schematic illustrations are used to ensure clear understanding of complex therapeutic procedures. As in the first edition, special tips of practical value are highlighted and potential pitfalls are identified, but in addition instructive cases have been added at the end of chapters. The second edition of *Therapeutic Gastrointestinal Endoscopy* will be an essential resource for all therapeutic endoscopists.

Food contains various compounds and many technologies exist to analyze those molecules of interest. However, the analysis of the spatial distribution of those compounds using conventional

technology, such as liquid chromatography-mass spectrometry or gas chromatography-mass spectrometry is difficult. Mass spectrometry imaging (MSI) is a mass spectrometry technique to visualize the spatial distribution of molecules, as biomarkers, metabolites, peptides or proteins by their molecular masses. Despite the fact that MSI has been generally considered a qualitative method, the signal generated by this technique is proportional to the relative abundance of the analyte and so quantification is possible. Mass Spectrometry Imaging in Food Analysis, a volume in the Food Analysis and Properties Series, explains how the novel use of matrix-assisted laser desorption/ionization mass spectrometry imaging (MALDI-MSI) will be an ideal complementary approach. MALDI-MSI is a two-dimensional MALDI-MS technology that can detect compounds in a tissue section without extraction, purification, separation, or labeling. It can be used to visualize the spatial distribution of biomolecules in foods. Features: Explains the novel use of matrix-assisted laser desorption/ionization mass spectrometry imaging in food analysis Describes how MALDI-MSI will be a useful technique for optical quality assurance. Shows how MALDI-MSI detects food contaminants and residues Covers the historical development of the technology While there are a multitude of books on mass spectrometry, none focus on food applications and thus this book is ideally suited to food scientists, food industry personnel engaged in product development, research institutions, and universities active in food analysis or chemical analysis. Also available in the Food Analysis and Properties Series: Food Aroma Evolution: During Food Processing, Cooking, and Aging, edited by Matteo Bordiga and Leo M.L. In this issue of Gastrointestinal Endoscopy Clinics of North America, we invited pioneers and experts in this field to share

recent advancements and expansions of ESD and its technical aspects in different organ systems. In addition, this issue covers the associated techniques of per oral endoscopic myotomy (POEM) and natural orifice transluminal endoscopic surgery (NOTES) to further advance understanding of the latest breakthroughs in endoscopic therapy. Current trends surrounding ESD around the world—in Asia, Europe, and the United States—are addressed as well. Some articles include videos for readers to watch ESD procedures in action, performed by experts, for easier understanding of ESD techniques. The Guest Editors expect that this issue will inspire more physicians to explore the expanding possibilities of endoscopic therapy such as ESD and POEM and to advocate minimally invasive treatment for patients.
