Suspension is probably
 the most
 misunderstood aspect
 of motorcycle
 performance. This
 book, by America's
 premier suspension

art and science of
 suspension tuning
 accessible to
 professional and
 backyard motorcycle
 mechanics alike. Based
 on Paul Thede's wildly
 popular Race Tech
 Suspension Seminars,
 this step-by-step guide
 shows anyone how to
 make their bike, or
 their kid's, handle like
 a pro's. Thede gives a
 clear account of the
 three forces of
 suspension that you
 must understand to
 make accurate
 assessments of your
 suspension's condition.
 He outlines testing
 procedures that will
 help you gauge how
 well you're improving
 your suspension, along
 with your riding. And, if
 you're inclined to
 perfect your bike's
 handling, he even
 explains the black art

of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Aside from the odd four-stroke built in their formative years, it wasn't until 1976 that

Suzuki manufactured such machines in significant numbers. Until then, it was two-strokes all the way. These models, many of which were the basis of successful racers, carried names like Titan, Cobra, Sebring, LeMans, Kettle, and Water Buffalo along with their codes. The author examines these models and others, providing the reader with: -- Extensive specification tables highlighting the variations in seemingly similar models -- Information to help the reader match model and marketing codes, essential when ordering parts or servicing a machine -- A model chart that matches full codes to their exact year, shows the years in which models were built, and

explains the relationship between similar codes Also included is the RE5 with its rotary engine and unique styling, and Suzuki's minute but complex road racers, which carried as many as 14 speeds in their gearboxes. Illustrated throughout with black-and-white photographs of the models and their variants.

Brembo, a leader in the development and production of high performance braking systems is turning 60. Over the decades, the principal mission of the Italian company has been to brake to best effect the greats on two and four wheels as well as daily users of private cars and motorcycles. The history, evolution and

on-going success of this prestigious Italian company are the themes of this official book, which opens with a preface by the Brembo chairman, Alberto Bombassei. The book reviews the diverse facets of the "Brembo universe": from its commitments in the automotive, motorcycling and motorsport fields to its attention to all aspects of design, always one of Brembo's strong suits, from the progressive internationalization of the company through to the particularly topical aspects of sustainable production. The contributions of the six principal authors - Vincenzo Borgomeo, Massimo Clarke, Gaetano Cocco, Patrizia Giangualano, Lorenzo Ramaciotti and

Umberto Zapelloni - are complemented by a similar number of testimonies from figures from within the company and those who worked there at length. The Brembo "phenomenon" is also presented through a wealth of fascinating photographs, mostly drawn from the company archives, which document the unique story of a manufacturing company born in Italy and now a true icon of Italian excellence throughout the world.

Wouldn't it be great if there were a physics book that showed you how things work instead of telling you how? Finally, with Head First Physics, there is. This comprehensive book takes the stress out of learning mechanics and practical physics by providing a fun and engaging experience, especially for students who "just don't get it."

Head First Physics offers a format that's rich in visuals and full of activities, including pictures, illustrations, puzzles, stories, and quizzes -- a mixed-media style proven to stimulate learning and retention. One look will convince you: This isn't mere theory, this is physics brought to life through real-world scenarios, simple experiments, and hypothetical projects. Head First Physics is perfect for anyone who's intrigued by how things work in the natural world. You'll quickly discover that physics isn't a dry subject. It's all about the world we live in, encompassing everything from falling objects and speeding cars, to conservation of energy and gravity and weightlessness, and

orbital behavior. This book: Helps you think like a physicist so you can understand why things really work the way they do Gives you relevant examples so you can fully grasp the principles before moving on to more complex concepts Designed to be used as a supplement study guide for the College Board's Advanced Placement Physics B Exam Introduces principles for the purpose of solving real-world problems, not memorization Teaches you how to measure, observe, calculate -- and yes -- how to do the math Covers scientific notation, SI units, vectors, motion, momentum conservation, Newton's Laws, energy conservation, weight and mass, gravitation

and orbits, circular motion and simple harmonic motion, and much more. If "Myth Busters" and other TV programs make you curious about our physical world -- or if you're a student forced to take a physics course -- now you can pursue the subject without the dread of boredom or the fear that it will be over your head. *Head First Physics* comes to rescue with an innovative, engaging, and inspirational way to learn physics!

A motorcycle's electrical system can be daunting to even the most adept home mechanic. And yet, the more complex these

systems become—and the more important to a motorcycle's function—the more useful, even critical, it will be to know something about them. That's where this book comes in with a user-friendly guide to understanding, diagnosing, and fixing the electrical systems and components that make a bike run . . . or falter. Veteran technician Tracy Martin explains the principles behind motorcycle electrical systems and how they work. He details the various tools, such as multimeters and test lights, that can be used to evaluate and troubleshoot any vehicle's electrical problem. And in several hands-on projects, he takes readers on a guided

tour of their vehicle's electrical system, along the way giving clear, step-by-step instructions for diagnosing specific problems.

It's good to talk about ministry. It's better to do it, and do it passionately. In 2008, the United Methodist Church lifted up "Four Areas of Focus" for ministry, and churches have responded. But at Ginghamburg Church, in the rust-belt town of Tipp City, Ohio, the church has been doing exciting and effective ministry in those four areas for 35 years and more. Engaging in

Ministry with the Poor Improving Global Health Developing Principled Christian Leaders Creating New and Renewed Congregations The work has led to a host of creative ministries and organic growth...because they were meeting the needs of their community and their world as the hands and feet of Christ. The book comes with a built-in facilitator Guide to encourage pastor peer groups and other leadership groups interested in deepening the discussion.

For Harley-Davidson aficionados, the very name Sportster conjures an image of a fire-breathing mechanical beast scorching the world's tarmac image the Sportster itself often does not live up to. Straight from the factory, in its standard form, the Sportster routinely proves an entry-level motorcycle providing a relatively tame ride. This book aims to change all that and to show every Sportster rider how to free the beast in his or her bike. With expert, detailed advice on the proper mechanical massaging and plenty of helpful diagrams and photos this updated, third edition

of Buzz Buzzelli's best-selling handbook shows how the Sportster can be transformed into the superbike of old. Including a history of the Sportster from its birth in 1957 to the recent introduction of a new engine (only the third in its long life), this book has everything it takes to open up the gates of hell and give the Sportster its head.
