RICE MORENO

Industrial and Marine Fuels Reference Book Janes Information Group

Consists largely of abstracts of articles and papers of interest to shipbuilders, ship owners and marine engineers.

Jane's World Railways 2006-2007 Macmillan International Higher Education

Describes the Diesel and Electric locomotives used on the main line and export mineral railways in Australia and the operating preserved steam locomotives used both on preserved lines and on main lines. Diesel locomotives are listed according to the type of Diesel engine and arranged to show the development of a

particular type of locomotive. Entries progressing from lower power to higher power units. This layout shows the similarity of types used on different systems, particularly in the area of State government railways. The Electric locomotives are grouped by system in chronological order Steam locomotives are organised by wheel arrangement since this brings together similar locomotives from different systems. Covers all the diesel and electric locomotives used by the Australian main line railways whether still in service or not. Many diesel locomotives are now being used for secondary duties by smaller operators or leased by larger operators as required.

Jane's World Railways, 1987-88 Kalmbach Publishing Company
This revised edition of Taylor's classic work on the internal-combustion engine incorporates changes and additions in engine design and control that have been brought on by the world

petroleum crisis, the subsequent emphasis on fuel economy, and the legal restraints on air pollution. The fundamentals and the topical organization, however, remain the same. The analytic rather than merely descriptive treatment of actual engine cycles, the exhaustive studies of air capacity, heat flow, friction, and the effects of cylinder size, and the emphasis on application have been preserved. These are the basic qualities that have made Taylor's work indispensable to more than one generation of engineers and designers of internal-combustion engines, as well as to teachers and graduate students in the fields of power, internal-combustion engineering, and general machine design.

This directory gives the reader data on railway systems and railway equipment manufacturers across the globe. The text is split into two sections: a country-by-country listing of the railway systems of the world, and the railway manufacturing and services industries.
