...Next-generation sequencing (NGS), also known as high-throughput sequencing, is the catch-all term used to describe a number of different modern sequencing technologies. These technologies allow for sequencing of DNA and RNA much more quickly and cheaply than the previously used Sanger sequencing, and as such revolutionised the study of genomics and molecular

biology. What is Next Generation DNA Sequencing? | Functional ... Next-Generation Sequencing (NGS) is a term used for describing a range of various modern sequence technology, also known as high-throughput sequencing. These technologies enable DNA and RNA to be sequenced much faster and cheaper than the Sanger sequence used

before. What is Next-generation sequencing (NGS)? - Bioinformatics ... Next-generation sequencing generates masses of DNA sequencing data, and is both less expensive and less time-consuming than traditional Sanger sequencing. 2 Illumina sequencing systems can deliver data output ranging from 300 kilobases up to multiple terabases in a single run,
