Parental alienation is an important phenomenon that mental health professionals should know about and thoroughly understand, especially those who work with children, adolescents, divorced adults, and adults whose parents divorced when they were children. In this book, the authors define parental alienation as a mental condition in which a child - usually one whose parents are engaged in a high- conflict divorce - allies himself or herself strongly with one parent (the preferred parent) and rejects a relationship with the other parent (the alienated parent) without legitimate justification. This process leads to a tragic outcome when the child and the alienated parent, who previously had a loving and mutually satisfying relationship, lose the nurture and joy of that relationship for many years and perhaps for their lifetimes. We estimate that 1 percent of children and adolescents in the U.S. experience parental alienation. When the phenomenon is properly recognized, this condition is preventable and treatable in many instances. The authors of this book believe that parental alienation is not simply a minor aberration in the life of a family, but a serious mental condition. Because of the false belief that the alienated parent is a dangerous or unworthy person, the child loses one of the most important relationships in his or her life. This book contains much information about the validity, reliability, and prevalence of parental alienation. It also includes a comprehensive international bibliography regarding parental alienation with more than 600 citations. In order to bring life to the definitions and the technical writing, several short clinical vignettes have been included. These vignettes are based on actual families and real events, but have been modified to protect the privacy of both the parents and children.

In the race to compete in today's fast-moving markets, large enterprises are busy adopting new technologies for creating new products, processes, and business models. But one obstacle on the road to digital transformation is placing too much emphasis on technology, and not enough on the types of processes technology enables. What if different lines of business could build their own services and applications—and decision-making was distributed rather than centralized? This report explores the concept of a digital business platform as a way of empowering individual business sectors to act on data in real time. Much innovation in a digital enterprise will increasingly happen at the edge, whether it involves business users (from marketers to data scientists) or IoT devices. To facilitate the process, your core IT team can provide these sectors with the digital tools they need to innovate quickly. This report explores: Key cultural and organizational changes for developing business capabilities through cross-functional product teams A platform for integrating applications, data sources, business partners, clients, mobile apps, social networks, and IoT devices Creating internal API programs for building innovative edge services in low-code or no-code environments Tools including Integration Platform as a Service, Application Platform as a Service, and Integration Software as a Service The challenge of integrating microservices and serverless architectures Event-driven architectures for processing and reacting to events in real time You'll also learn about a complete pervasive integration solution as a core component of a digital business platform to serve every audience in your organization.

This publication is a testament to the potential of integrating traditional and scientific knowledge of both local communities and academic and development professionals alike. It also serves as a reminder to the scientific community that science should be shared with local people and not confined to journals and closed circles of technical experts. Scientists and forest-reliant

communities are geographically and conceptually distant. Scientific findings are rarely shared with local people and locals are infrequently consulted regarding the species and landscapes they have known for generations. To bridge this divide, this book weaves together the voices of farmers and scientists; hunters and policy makers; midwives and musicians. From Brazil nuts and Cat's claw to Copaiba and Titica, this book shares a wealth of information on a wide range of plant species that comes only from the close collaboration between local peoples and researchers.

Diabetes has become a worldwide health problem, the global estimated prevalence approaches ten percent and the burden of this disease in terms of morbidity and mortality is unprecedented. The advances acquired through the knowledge of the mechanisms of the disease and the variety of therapeutic approaches contrast with the inability of private and public health systems in underdeveloped and even developed countries to achieve the goals of treatment. This paradox has been described in many sources: the surge of scientific advances contrast with an unprecedented amount of human suffering. Thus, a patient centered and an evidence based approach with the capacity to produce measurable clinical and economic outcomes is required. The purpose of this textbook is multiple: to offer a comprehensive resource covering all aspects of outpatient management; to address diabetes as a health problem from an epidemiological, economic and clinical perspective; to discuss the role of social determinants of health on the worldwide increase in diabetes; to highlight the challenges and obstacles in providing adequate care; and to outline a multidisciplinary approach to management in which medical visits retain their importance as part of a team comprising the patient, his or her family and a multidisciplinary group of health professionals who are able to move beyond the traditional approach of diabetes as a disease and greatly improve outcomes.

Companies are required to implement a new accounting standard in January 2018 - the IFRS 15 standard for revenue from contracts with customers. In the process, they have the unique chance to do more than just fulfill a regulation: The implementation is an opportunity to critically assess processes for revenue accounting

and improve inefficient "business-as-usual" processes. When the standard is implemented together with process improvements and powerful software, your company can gain a competitive advantage and significantly lower the cost of becoming compliant. Those companies that drag their feet and have to comply on a manual basis each month after January 2018 will be at a disadvantage, due to the high cost of manually reconciling accounts and creating reports. In this book, you will learn the regulatory background of IFRS 15 and how to best meet the challenges associated with implementation, based on examples from the telecommunications and software industries. "IFRS 15: Revenue from contracts with customers, with SAP Revenue Accounting and Reporting" prepares organizations for the impact of the standard on processes throughout the company that are related to revenue recognition. The authors explore: - How the most important IFRS 15 framework, the 5-step model, works - How different areas of your company will be affected by IFRS 15 - How IFRS 15 implementation works with the solution from one vendor, SAP's Revenue Accounting and Reporting (SAP RAR) module.

Programming with C++20 teaches programmers with C++ experience the new features of C++20 and how to apply them. It does so by assuming C++11 knowledge. Elements of the standards between C++11 and C++20 will be briefly introduced, if necessary. However, the focus is on teaching the features of C++20. You will start with learning about the so-called big four Concepts, Coroutines, `std::ranges`, and modules. The big four are followed by smaller yet not less important features. You will learn about `std::format`, the new way to format a string in C++. In chapter 6, you will learn about a new operator, the so-called spaceship operator, which makes you write less code. You then
