Echogenic Bowel - an overview | ScienceDirect Topics Chapter 61 Neonatal Intestinal Obstruction CHAPTER 61 Neonatal Intestinal Obstruction Daniel Sidler Miliard Debrew Kokila Lakhoo Introduction Neonatal intestinal obstruction (NIO) is one of the most common emergency conditions a paediatric surgeon is called upon to assess during the neonatal period. Successful management of NIO depends on timely diagnosis and referral for therapy. CHAPTER 61 Neonatal Intestinal Obstruction Objective: Intestinal obstruction is a blockage of the intestinal content through bowel. The block must be complete and permanent. Obstruction may be mechanical, simple or strangulated, and paralytic. The purpose of this chapter is to clarify, also evaluating our surgical experience, the steps to diagnose and the ways to treat intestinal obstructions. Management of Intestinal Obstruction | IntechOpen Intestinal Obstruction Intestinal obstruction is relatively rare in pregnancy but is the second most common nonobstetric abdominal emergency. The incidence is 1 in 3000 pregnancies. 78 It is extremely rare in early pregnancy but begins to increase between the fourth and fifth month of gestation when the uterus changes from a pelvic organ to an abdominal organ. Gastrointestinal Complications in Pregnancy | GLOWM Chapter 1: Birth and neonatal resuscitation 1.1 Preparation for birth ...
