Principles of Conflict Economics

Pearson

Macroeconomics tries to describe and explain the economywide movement of prices, output, and unemployment. The field has been sharply divided among various schools, including Keynesian, monetarist, new classical, and others. It has also been split between theorists and empiricists. Ray Fair is a resolute empiricist, developing and refining methods for testing theories and models. The field cannot advance without the

discipline of testing how well the models approximate the data. Using a multicountry econometric model, he examines several important questions, including what causes inflation, how monetary authorities behave and what are their stabilization limits, how large is the wealth effect on aggregate consumption, whether European monetary policy has been too restrictive, and how large are the stabilization costs to Europe of adopting the euro. He finds, among other things, little evidence for the rational expectations hypothesis and for the so-called non-accelerating inflation rate of unemployment (NAIRU) hypothesis. He also shows that the U.S. economy in the last half of the 1990s was not a new age economy.

Principles of Economics Pearson Etext Access Card Pearson Higher Ed "Are you tired of books that sacrifice clarity by introducing some of the complexities of economic theory too early?" Case/Fair/Oster, believe that the best way to understand how market opportunities operate and the best way to understand basic economic theory is to work through the perfectly competitive model first, including discussions of output markets, input markets (land, labor & capital), and the connections between them, before turning to noncompetitive market structures, such as monopolies and oligopolies. When students understand how a simple perfectly competitive system works, they can start thinking about how the pieces of the economy fit together. Learning perfect competition first enables students to see the power of the market system. It is impossible to discuss the efficiency of markets as well as the problems that arise from markets until students have seen how a simple, perfectly competitive market system

produces good and services. Reviewers tell us that Case/Fair is one of the all-time bestselling POE texts because they trust it to be clear, thorough and complete. This well-respected author team is joined for the 9th edition by a new co-author, Sharon Oster. Sharon's research and teaching experience brings new coverage of modern topics and an applied approach to economic theory, as demonstrated in the new "Economics in Practice" feature. 0138001952 / 9780138001957 Principles of Microeconomics & MyEconLab Student Access Card & MEL Package Package consists of: 013605885X / 9780136058854 Principles of Microeconomics 0136124755 / 9780136124757 MyEconLab Student Access Code Card (for valuepack) *Principles of Microeconomics* Pearson The full text downloaded to your computer With eBooks you can: search for key concepts, words and phrases make highlights and notes as you study share your notes with friends eBooks are downloaded to your computer and accessible either offline through the Bookshelf (available as a free download), available online and also via the iPad and Android apps.
