Basic Trauma Life Support  
JP Medical Ltd  
Every day thousands of  
people are killed and  
injured on our roads. Men,  
women or children  
walking, biking or riding to  
school or work, playing in

the streets or setting out  
on long trips, will never  
return home, leaving  
behind shattered families  
and communities. Millions  
of people each year will  
spend long weeks in  
hospital after severe  
crashes and many will  
never be able to live, work  
or play as they used to  
do. Current efforts to  
address road safety are  
minimal in comparison to

this growing human  
suffering. The World  
Health Organization and  
the World Bank have  
jointly produced this  
World rep.

 Problems contacting emergency services and delayed assistance are not unusual when incidents occur in rural areas, and the

consequences can be devastating, particularly with mass casualty incidents. The IOM's Forum on Medical and Public Health Preparedness for Catastrophic Events held a workshop to examine the current capabilities of emergency response systems and the future opportunities to improve mass casualty response in rural communities.

The National Science Education Standards set broad content goals for teaching grades K-12. For science teaching programs to achieve these goals—indeed, for science teaching to be most effective—teachers and students need

textbooks, lab kits, videos, and other materials that are clear, accurate, and help students achieve the goals set by the standards. *Selecting Instructional Materials* provides a rigorously field-tested procedure to help education decisionmakers evaluate and choose materials for the science classroom. The recommended procedure is unique, adaptable to local needs, and realistic given the time and money limitations typical to school districts. This

volume includes a guide outlining the entire process for school district facilitators, and provides review instruments for each step. It critically reviews the current selection process for science teaching materials—in the 20 states where the state board of education sets forth a recommended list and in the 30 states where materials are selected entirely by local decisionmakers. *Selecting Instructional Materials* explores how purchasing decisions are influenced

by parent attitudes, political considerations, and the marketing skills of those who produce and sell science teaching materials. It will be indispensable to state and local education decisionmakers, science program administrators and teachers, and science education advocates.
