A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving off the beautiful Canary Islands In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of

Lanzarote, rejecting what Sven considered a vulgar culture of materialism and judgment. The young couple set up a diving service catering to tourists eager to bask in the warm sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's approach was simple: take the mechanics of diving seriously, instruct his clients clearly, and stay out of their personal business as best he can. And life on the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo Hast, a stalled novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two visitors and their hosts quickly become embroiled in a tangle of jealousy and suspicion. Sven is

struck by Jola's beauty, her evident wealth, and her apparently volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he seems to facilitate it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view shifts from one character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A brutal game of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the waves.

This illustrated history chronicles electric and hybrid cars from the late 19th century to today's fuel cell and plug-in automobiles. It describes the politics, technology, marketing strategies, and environmental issues that have impacted electric and hybrid cars' research and development. The important marketing shift from a "woman's car" to "going green" is discussed. Milestone projects and technologies such as early batteries, hydrogen and bio-mass fuel cells, the upsurge of hybrid vehicles, and the various regulations and market forces that have shaped the industry are also covered.

This book was born from curiosity. To begin with, it was the curiosity of an economist who studied in the 60's in an environment which has subsequently developed from national into global economics. Who has to recognize that politicians, scholars and large segments of society oblivious to supranational authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy. And pretend as though their own national state were still the "master in its own house" that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which "rooms". All that has become fiction. The laws of globalization diminish the manoeuvring space for shaping national economic policy. Even if many folks today don't want to hear it: The issue is no longer achieving what is socially politically desirable for the own

society but rather the optimal adaptation of society and social benefits to the politically practicable.

In the United States there are several thousand devices containing high-activity radiation sources licensed for use in areas ranging from medical uses such as cancer therapy to safety uses such as testing of structures and industrial equipment. Those radiation sources are licensed by the U.S. Nuclear Regulatory Commission and state agencies. Concerns have been raised about the safety and security of the radiation sources, particularly amid fears that they could be used to create dirty bombs, or radiological dispersal device (RDD). In response to a request from Congress, the U.S. Nuclear Regulatory Commission asked the National Research Council to conduct a study to review the uses of high-risk radiation sources and the feasibility of replacing them with lower risk alternatives. The study concludes that the U.S. government should consider factors such as potential economic consequences of misuse of the radiation sources into its assessments of risk. Although the committee found that replacements of most sources are possible, it is not economically feasible in some cases. The committee recommends that the U.S. government take steps to in the near term to replace radioactive cesium chloride radiation sources, a potential "dirty bomb" ingredient used in some medical and research equipment, with lower-risk alternatives. The committee further recommends that longer term efforts be undertaken to replace other sources. The book presents a number of options for making those replacements.

The main topic of this book is the introduction of a new mobility service: One-Way and Open-End car-sharing. Dr. Bodo Schwieger describes a process starting from the anticipation and measurement of customer's needs to the introduction of innovative services. The described field test is second to none, as it offers gasoline vehicles in a One-Way rental scheme within an urban environment: 25 Smart vehicles were based at 8 stations and available to 4,000 car-sharing customers. This service is being analyzed for efficiency and customer reactions. In a second step, other car-sharing companies in Hamburg (Germany), Seattle (Washington), Kyoto and Tokyo (Japan) are analyzed for their approaches to improving their services. combines

technological competence, marketing know-how and customer analysis. Car-sharing has recently become a highly relevant topic with the fast expansion of the American providers and the market entry of Deutsche Bahn AG and Shell AG in Germany. The method respects the large amount of interdependence with other services and also the multiplicity of different customer groups. Thus it can be transferred to other (transportation) services - and used as a beginner's guide to service analysis. The book is based on the author's dissertation, which was accepted at the Technical University of Berlin in 2003. It delivers, on 150 pages, densely accumulated information. It is worth reading for anyone who is involved in introducing and developing new services, either within transportation or in related branches.

Jobs to Be Done John Wiley & Sons

In a challenging economy filled with multiple competitors, no one can afford to stagnate. Yet, innovation is notoriously difficult. How do you pinpoint the winning ideas that customers will love? Sifting through purchasing data for clues about what might sell or haphazardly brainstorming ideas are typical strategies. However, innovation expert Stephen Wunker offers the effective Jobs method: determining the drivers of customer behavior--those functional and emotional goals that people want to achieve. This simple shift in perspective opens up new insights about your customers and a wealth of hidden opportunities. For example, social media newcomer Snapchat used the Jobs process to capture the millennial demographic. By reducing functionality, the company satisfied its users' unmet need to document real life

in the moment, without filters and "like" buttons. Packed with similar examples from every industry, this complete innovation guide explains both foundational concepts and a detailed action plan developed by Wunker and his team. In *Jobs to Be Done*, the groundbreaking *Jobs Roadmap* takes you step-by-step through the innovation process and reveals how to: Gather valuable customer insights Turn those insights into new product ideas Test and iterate until you find original profitable solutions And much more! *Jobs to Be Done* gives you a clear-cut framework for thinking about your business, outlines a roadmap for discovering new markets, new products and services, and helps you generate creative opportunities to innovate your way to success.

on the fundamentals of implementation standards and strategies for Web services (in the first half of the book), while also presenting composition techniques for leveraging existing services to create larger ones (in the second half). Pursuing a unique approach, it begins with a sound overview of concepts, followed by a targeted technical discussion that is in turn linked to practical exercises for hands-on learning. For each chapter, practical exercises are available on Github. Mainly intended as a comprehensive textbook on the implementation and composition of Web services, it also offers a useful reference guide for academics and practitioners. Lecturers will find this book useful for a variety of courses, from undergraduate courses on the foundational technology of Web services through graduate courses on complex Web service composition. Students and researchers entering the field will benefit from the combination of a broad technical overview with practical self-guided exercises. Lastly, professionals will gain a well-informed grasp of how to synthesize the concepts of conventional and "newer" breeds of Web services, which they can use to revise foundational concepts or for practical implementation tasks.
