This volume is an outgrowth of contemporary research on development over the adult lifespan, which by now has burgeoned and developed both nationally and internationally. However, for us, the impetus to be involved in

this area was spawned and nurtured by our initial association with the Society for Research in Adult Development (SRAD) with its origins some 15 years ago by Michael Commons and his associates in Cambridge, Massachusetts.

Through the good will and support of this society, we also became, and are still, heavily involved with the Journal of Adult Development and the

Kluwer-Plenum Monograph Series on Adult Development and Aging, of which this volume is a companion. Many of the contributions in the volume are from SRAD members, who consistently adhere to a focus on positive adult development. Their chapters have been complemented by pieces from other researchers, who have adopted more mainstream approaches to adult development

and/or aging. Regardless of the particular approach and/or focus of the chapter, all the work reported herein supports the relatively recent idea that development is not restricted to children and adolescents but continues throughout the adult lifespan in ways that we never envisioned some 20 years ago. Thus, the volume represents state-of-the-art theory, research, and practice on adult development, which has the potential to occupy us all for some time to come.

The field of emotions research has recently seen an unexpected period of growth and expansion, both in traditional psychological literature and in gerontology.

The Handbook of Emotion, Adult Development, and Aging provides a broad overview and summary of where this field stands today, specifically with reference to life course issues and aging. Written by a distinguished group of contributing authors, the text is grounded in a life span developmental framework, while advancing a multidimensional view of emotion and

its development and incorporating quantitative and qualitative research findings. The book is divided into five parts. Part One discusses five major theoretical perspectives including biological, discrete emotions, ethological, humanistic, and psychosocial. Part Two on affect and cognition discusses the role of emotion in memory, problem

solving, and internal perceptions of self and gender. Part Three on emotion and relationships expands on the role of emotion in sibling and parent/child relationships, as well as relationships between friends and romantic partners, and the emotional reaction to interpersonal loss across the life span. Part Four on stress, health, and psychological well-being treats issues of stress and coping,

religion, personality, and quality of life. The final part on continuity and change in emotion patterns and personality discusses emotion and emotionality throughout the life span. An ideal reference source for professionals across a wide range of disciplines, the text summarizes recent important developments in this fast growing area of psychology and proposes many new

This volume contains an

expansion of the material dealt with in the first edition plus extensive updating that incorporates significant recent research. It presents an integrative view of the field of adult development as well as an orientation to research and practice for interested professionals. The material is organized around a topical approach that deals with processes within several major areas of human

functioning. . . . The book is for advanced undergraduates, as it requires some sophistication on the part of the reader. An excellent addition to academic libraries, it can serve as a valuable reference and source book. Choice [The book] is a distinctive contribution to the array of texts on adult development. Whitbourne's second edition is a very useful and unique addition to the existing textbooks in the field. It could well serve as a text for advanced courses on adult development, particularly with a psychosocial orientation. Contemporary Psychology Aging and Older Adulthood McGraw-Hill Humanities, Social Sciences & World Languages Adult development and learning have always existed as two separate fields of study, with development falling under psychology and learning under education. Recent advances in theory, research, and practice, however, have made it clear that an important reciprocal relationship exists between them: advances in development frequently lead to learning, and conversely, learning quite often fuels development. The synchronicity between development and learning is responsible for

positive changes in many capacities, including insight, intelligence, reflective and meta-cognition, personality expression, interpersonal competence, and self-efficacy. This synchronicity is also leading to the growth of a new discipline at the borders of adult development and learning. The Handbook of Adult Development and Learning is the first to bring together the leading

scholars from both adult development and learning to explore what will form the foundation for this new discipline--the latest research at the intersection of these fields. It examines six major aspects of their intersection: foundations, key areas of integration, the self system, higher reaches of development and learning, essential contexts, and specific applications. An

introductory chapter explains why it is so important to recognize and fuel the growth of this new discipline. Subsequent chapters review the latest theoretical and empirical literature and provide a rich itinerary for future research. This handbook is a must-read for all who promote optimal aging. It will be an invaluable reference for scholars in development and education, as

well as rich resource for policy makers and practitioners, such as corporate executives and human-resource personnel.

John Wiley & Sons  
Abstract: A college textbook addresses modern views concerning societal and cultural factors, practices, and policies concerning a variety of aspects that are encountered

in adult development and aging process. Following an introductory section on developmental theory, age norms, and expectations, the remaining 10 chapters of the text are grouped among 4 principal themes: 1) family and work as primary roles of adulthood; 2) continuity and changes with respect to intelligence, learning, creativity, adult sexuality, mental and physical

health issues, longevity, death, and dying; 3) cultural variations and issues during aging, covering various ethnic groups; and 4) mechanisms for enhancing the adult years, including the US government's role in quality of life improvement. The developmental stages of early, middle, and late adulthood are each considered within each of the topics addressed.
