Sexual violence against men is an under-theorised and under-noticed topic, though it is becoming increasingly apparent that this form of violence is widespread. Yet despite emerging evidence documenting its incidence, especially in conflict and post-conflict zones, efforts to understand its causes and develop strategies to reduce it are hampered by a dearth of theoretical engagement. One of the reasons that might explain its empirical invisibility and theoretical vacuity is its complicated

relationship with sexual violence against women. The latter is evident empirically, theoretically, and politically, but the relationship between these violences conjures a range of complex and controversial questions about the ways they might be different, and why and how these differences matter. It is the case that sexual violence (when noticed at all) has historically been understood to happen largely, if not only, to women, allegedly because of their gender and their ensuing place in gender orders. This begs important questions regarding the impact of increasing knowledge about sexual violence against men, including the impact on

resources, on understandings about, and experiences of masculinity, and whether the idea and practice of gender hierarchy is outdated. This book engages this diverse set of questions and offers fresh analysis on the incidences of sexual violence against men using both new and existing data. Additionally, the authors pay close attention to some of the controversial debates in the context of sexual violence against men, revisiting and asking new questions about the vexed issue of masculinities and related theories of gender hierarchy. The book will be of great interest to students and scholars of sex, gender, masculinities,

corporeality, violence, and global politics, as well as to practitioners and activists. Springer Nature Contemporary Health Studies provides an accessible introduction to current issues and key debates in understanding and promoting health. Its up-to-date, global focus places a strong emphasis on the social, political and environmental dimensions of health. Part One sets the scene by looking closely at the definition of 'health' and outlining the aims and purpose of health studies. Part Two explores the different disciplines that underpin health studies, such as sociology, psychology, anthropology and health psychology,

incorporating new theoretical frameworks to help readers understand health. Part Three applies this knowledge to address the determinants of health, including chapters on individual factors, the role of public health, the latest policy influences on health and the growing importance of the global context. Each chapter contains contemporary statistics and evidence alongside carefully developed learning features designed to highlight the fundamentals of each topic, to apply these to in-depth case studies – from global antibiotic resistance to the challenge and promise of digital data –, and to pose questions for reflection and debate.

Contemporary Health

Studies is an essential guide for undergraduate health students written by three authors who have a wealth of teaching experience in this subject area. Their book will inspire readers to consider the human experience of health within contemporary global society as it is mediated by individual, societal and global contexts.

Multidisciplinary Perspectives on Family Violence Springer
Despite diverse, rich cultural traditions and abundant economic

opportunity, there has been a paucity of research on psychology in Southeast Asia. This book aims to fill that gap, with a series of well-written theoretical and empirical chapters by PhD psychologists in SE Asia along with respected international colleagues and co-authors from around the globe. In particular this book focuses upon critical sociocultural, clinical, and health issues and perspectives in psychology in Southeast Asia. Overviews help contextualize the cultural data, permitting nuanced examination of significant psychological issues in nations such as Malaysia, Indonesia, Thailand, Singapore,

and more. Psychologists and mental health professionals with interests in Asia will find this book to be a must-read, as will other readers seeking to deepen their cultural and international understanding. [Building a Foundation for Better Understanding](#) Jones & Bartlett Publishers

Handbook of Aging and Mental Health
Routledge

Men drink too much alcohol, eat unhealthy food and avoid going to the doctors until they are seriously ill. Indeed, some say being masculine is bad for men's health. But is the situation so simple? This deeply engaging book explores both the psychological and sociological factors that affect men and their health. It investigates how notions of 'maleness' impact on the individual's approach to health and take-up

of services, and provides clear foundations for best practice in care. Part 1 of the book explores and sets the theoretical scene. It asks why disparate fields have not previously been brought together and what theoretical frameworks could be utilised to assist in this process. Parts 2 and 3 consider empirical work in relation to men, health and illness, providing critical rather than simply descriptive accounts. Bringing together an international collection of contributors, *Men, Masculinities and Health* provides fresh ideas for practice; creating a fertile terrain for future debate that will excite all those interested in

gender issues.

The different research
fields - gerontology,
gender and health -
have generated
different views,
knowledge and foci on
ageing, health and
gender. It is now
necessary to integrate
these aspects into
research, policy and
practice. The objective
of this book is to
provide an overview of
gender, health and
ageing. Important

theoretical concepts, such as life course and "Lebenslagen" in old age, or differences in men's health, are introduced. It is increasingly important to build a European basis of knowledge, to conduct discussions on European research findings, and to develop European research frameworks. In this volume, central theoretical debates on gender impacts on life course and old-age health, and vital issues of health research in the context of gender and old age are introduced. Specific aspects, such as the impact of gender and age on cardiovascular health, elder abuse and mental health, or care between gender relations, gender roles and gender constructs, are pointed out.

Special attention is given to the impact of social, political and economic change in different New EU Member States, like Hungary, Poland and Slovenia.

Cross-Cultural and Cross-Disciplinary Perspectives in Social Gerontology

Springer Publishing Company

This comprehensive resource responds to a growing need for theory and multidisciplinary integrative research in adult and gerontological health. Handbook of Aging and Mental Health brings together, for the first time, diverse strategies and methodologies as well as theoretical

formulations involving psychodynamic, behavioral, psychosocial, and biological systems as they relate to aging and health. Forward-thinking in his approach, Lomranz provides the mental health, adult developmental, and geriatric professions with a single reference source that covers theory construction, empirical research, treatment, and multidisciplinary program development. The Health of Lesbian, Gay, Bisexual, and Transgender People Elsevier Health Sciences Extensive social science research, particularly by anthropologists, has explored women's reproductive lives, their use of

reproductive technologies, and their experiences as mothers and nurturers of children. Meanwhile, few if any volumes have explored men's reproductive concerns or contributions to women's reproductive health: Men are clearly viewed as the "second sex" in reproduction. This volume argues that the marginalization of men is an oversight of considerable proportions. It sheds new light on male reproduction from a cross-cultural, global perspective, focusing not only upon men in Europe and America but also those in the Middle East, Asia, and Latin America. Both heterosexual and homosexual, married and unmarried men are featured in this

volume, which assesses concerns ranging from masculinity and sexuality to childbirth and fatherhood.

This volume intends to re-establish social gerontology as a discipline that has pragmatic links to policy and practice. Collectively, the chapters enrich public debates about the moral, cultural and economic questions

surrounding aging, thereby ameliorating the “problems” associated with aging societies. This volume is uniquely cross-cultural, theory-driven and cross-disciplinary. It fills a gap in the gerontological scholarship of the global south that is predominantly descriptive and empirical. Based on original research, this volume examines in particular the sociological question of inequality and its intersection with age, gender, health, family and social relations. In the process, the studies herein highlight the unique historical, institutional and social systems that govern the subjective experience of aging in diverse contexts globally. Specifically,

societies in transition including India, Lebanon, Nigeria, Japan, China, Israel and in Europe are studied while connecting the micro-social experience of aging (loneliness, wellbeing, discrimination, relationships and resilience) with larger temporal and political contexts. This exercise generates intellectual capital that reformulates links between aging research and policy in innovative ways. Overall, the volume echoes the global scientific commitment to understand the socio-cultural process of aging in transitional societies and utilizes rich opportunities for cross-fertilization of ideas, disciplines and methods to advance the gerontological

promise of critical inquiry, training and practice.
Aligning Perspectives in Gender Mainstreaming
Routledge
Worldwide, men have more opportunities, privileges, and power, yet they also have shorter life expectancies than women. Why is this? Why are there stark differences in the burden of disease, quality of life, and length of life amongst men, by race, ethnicity, (dis)ability status, sexual orientation, gender identity, rurality, and national context? Why is this a largely unexplored area of research? Men's Health Equity is the first volume to describe men's health equity as a field of study that

emerged from gaps in and between research on men's health and health inequities. This handbook provides a comprehensive review of foundations of the field; summarizes the issues unique to different populations; discusses key frameworks for studying and exploring issues that cut across populations in the United States, Australia, Canada, the United Kingdom, Central America, and South America; and offers strategies for improving the health of key population groups and achieving men's health equity overall. This book systematically explores the underlying causes of these differences, describes the specific challenges faced by particular groups of

men, and offers policy and programmatic strategies to improve the health and well-being of men and pursue men's health equity. Men's Health Equity will be the first collection to present the state of the science in this field, its progress, its breadth, and its future. This book is an invaluable resource for scholars, researchers, students, and professionals interested in men's health equity, men's health, psychology of men's health, gender studies, public health, and global health. *Social and Behavioral Foundations of Public Health* John Wiley & Sons
Both health care practitioners and health planners are beginning to recognize the importance of

differences between lay and professional concepts of health and illness. The editors of this volume, having themselves worked in this field for many years, have selected and brought together writings by distinguished scholars from Britain, France, the United States, Germany and Poland. What impresses most is the range of problems synthesized from a genuinely international and interdisciplinary perspective. No reader can fail to be fascinated by the often peculiar ways in which different societies have tried to cope with the existential questions of health and illness.

Masculinity, Identity and Well-being
Bloomsbury Publishing
At a time when lesbian,

gay, bisexual, and transgender individuals--often referred to under the umbrella acronym LGBT--are becoming more visible in society and more socially acknowledged, clinicians and researchers are faced with incomplete information about their health status. While LGBT populations often are combined as a single entity for research and advocacy purposes, each is a distinct population group with its own specific health needs. Furthermore, the experiences of LGBT individuals are not uniform and are shaped by factors of race, ethnicity, socioeconomic status, geographical location, and age, any of which can have an effect on

health-related concerns and needs. The Health of Lesbian, Gay, Bisexual, and Transgender People assesses the state of science on the health status of LGBT populations, identifies research gaps and opportunities, and outlines a research agenda for the National Institute of Health. The report examines the health status of these populations in three life stages: childhood and adolescence, early/middle adulthood, and later adulthood. At each life stage, the committee studied mental health, physical health, risks and protective factors, health services, and contextual influences. To advance understanding of the health needs of all LGBT individuals, the

report finds that researchers need more data about the demographics of these populations, improved methods for collecting and analyzing data, and an increased participation of sexual and gender minorities in research. The Health of Lesbian, Gay, Bisexual, and Transgender People is a valuable resource for policymakers, federal agencies including the National Institute of Health (NIH), LGBT advocacy groups, clinicians, and service providers.

Men's Health Concepts in Male Health Perspectives Across The Lifespan This volume addresses some of the most prominent questions in contemporary bioethics and philosophy of medicine: 'liberal' eugenics, enhancement, the normal and the pathological, the classification of mental illness, the relation between genetics, disease and the political sphere, the

experience of illness and disability, and the sense of the subject of bioethical inquiry itself. All of these issues are addressed from a “continental” perspective, drawing on a rich tradition of inquiry into these questions in the fields of phenomenology, philosophical hermeneutics, French epistemology, critical theory and post-structuralism. At the same time, the contributions engage with the Anglo-American debate, resulting in a fruitful and constructive conversation that not only shows the depth and breadth of continental perspectives in bioethics and medicine, but also opens new avenues of discussion and

exploration. For decades European philosophers have offered important insights into the relation between the practices of medicine, the concept of illness, and society more broadly understood. These interventions have generally striven to be both historically nuanced and accessible to non-experts. From Georges Canguilhem’s seminal *The Normal and the Pathological*, Michel Foucault’s lectures on madness, sexuality, and biopolitics, Hans Jonas’s deeply thoughtful essays on the right to die, life extension, and ethics in a technological age, Hans-Georg Gadamer’s lectures on *The Enigma of Health*, and more recently Jürgen Habermas’s carefully

nuanced interventions on the question of liberal eugenics, these thinkers have sought to engage the wider public as much as their fellow philosophers on questions of paramount importance to current bioethical and social-political debate. The essays contained here continue this tradition of engagement and

accessibility. In the best practices of European philosophy, the contributions in this volume aim to engage with and stimulate a broad spectrum of readers, not just experts. In doing so the volume offers a showcase of the richness and rigor of continental perspectives on medicine and society.
