The circulatory system is a network of vessels—the arteries, veins, and capillaries—and a pump, the heart. In all vertebrate organisms this is a closed-loop system, in which the blood is largely separated from the body's other extracellular fluid compartment, the interstitial fluid, which is the fluid bathing the cells.11.3 Circulatory and Respiratory Systems - Concepts of ...The movement of air into and out of the lungs. Air travels into the nose/mouth, past the pharynx, pass the larynx into the trachea. Air eventually splits into each of the bronchi, then bronchioles eventually reaching the alveoli (air sacs)

where gas exchange can occur. Circulatory and Respiratory System Flashcards | Quizlet The circulatory system can be a single unit or it can be part of a larger unit on health and/or the human body.
