Log Book Springer-Verlag

This practical and engaging book provides a coherent approach to global business responsibility and ethics based on the latest research, theory, and practice. The authors incorporate numerous interesting and current real world examples to support the argument that corporations need to - and can - identify and implement processes that foster ethical conduct, ensure basic human rights, protect the natural environment, and enhance social justice wherever businesses operate around the globe. "Global Business Citizenship" combines elements of political theory, stakeholder relationships, business ethics, corporate social performance,

accountability and measurement, and organizational change. Its practical approach encompasses "best practices" in stakeholder management, experiments in applying corporate values to local conditions, and social environmental auditing and reporting. Focusing on the strategic alignment and change management process for implementing business citizenship principles and practices, it is an essential supplement for any course concerned with ethics and social responsibility in today's global business climate.

This reference contains the latest knowledge on vehicle development with CVT powertrains, transmission assembly design and performance, and the design and development of the five major components of CVT technology: launch device, variator systems, geartrains, control systems, and lubrication. Building on an earlier SAE publication, the 37 technical papers selected for this book cover updated information on a variety of topics within the area of CVTs. Although this book is not intended to represent the full body of CVT technology, it provides technical presentations and their reference documents, which can lead to discussions covering several topics of interest in CVTs.

In research on Information Structure, there is an ongoing discussion about the role of contrast. While most linguists consider contrast to be compatible with both focus and topic, some argue that it is an autonomous IS category. Contrast has been shown to be encoded by different linguistic means, such as specific morphemes, adverbials, clefts, prosodic cues. Hence, this concept is also related to other domains, in particular morphosyntax and prosody. The precise way in which they interact is however not yet entirely clear. Moreover, from a methodological point of view, the identification and annotation of contrast in corpora is not straightforward. This volume provides a selection of articles discussing the definition of contrast, the importance of distinguishing different types of contrast, the use of several encoding strategies, and the annotation of contrast in corpora using the Question Under Discussion Model. The contributions offer data on English, French, French Belgian Sign Language, German, Hindi, Italian and Spanish.

This monograph was prepared for the Agency for International Development, Washington D. C. 20523. The authors gratefully acknowledge the assistance of the following Research Assistants in the Department of Agricultural Engineering: G. Lamorey, E. A. Osman and K. Sachs. J. L. Bumgarner, Draftsman for the Department, did most of the ink drawings. The writing of the monograph provided a unique opportunity to collect and study a significant part of the English and some German literature on the subject starting about the year 1900. It may be concluded that, despite renewed worldwide efforts in this field, only in significant advances have been made in the design of gas producer-engine systems.
