Who's Who in the World 1995

Cambridge University Press
This monograph is a theoretical and empirical investigation into the mechanisms and causes of successful and unsuccessful adult second language acquisition. Couched within a generative framework, the study explores how a learner's first language and the age at which they acquire their second language may contribute to the L2 knowledge

that they can ultimately attain. The empirical study focuses on a group of very advanced L2 speakers, and through a series of tests aims to discover what underpins their near mastery of grammatical gender and other grammatical properties. The book explores an account of persistent selective divergence based on the idea that child and adult learners are fundamentally similar, except

that in adults the L1 plays the role of a fairly rigid filter of the linguistic input. The impossibility of representing the new target language other than by using the building blocks of the previously established L1 is argued to be the main reason why near but not totally native like language representations are formed and become established in adult L2 learners. All of these nouns may be sorted out by means of the "two basic rules" when exceptions are noted. These two rules determine the gender of 90% of the 33,000 nouns in a comprehensive French dictionary. The remaining 10% are</p> | <p>"exceptions" to the "two basic rules" and are listed phonetically in rule order in contextual blocks and defined. Homonyms (about 250), which are derived from all lists, are alphabetically listed in pairs. Homonyms demand proper gender to establish meaning (un tour, a tour, une tour, a tower). Exact cognates (about 7000) are separately listed in alphabetical order. All About French Nouns: Focus</p> | <p>on Gender confronts the French gender problem and defines it in the most concise manner possible. while still adhering to state and school standards. The Ohio Teacher R. R. Bowker Unlike most monographs on Spanish phonology and morphology that approach these topics from a structuralist or generativist framework, this volume is written from a less traditional point of view. More specifically, it emphasizes quantitative evidence from sources such as usage-based studies, psycholinguist

ic experiments, corpus data, and computer simulations. Arguments are presented to demonstrate that these kinds of evidence are crucial for establishing theories of language that relate to the psychological mechanisms involved in producing and comprehending speech, in contrast to theories about abstract linguistic structure. A range of topics is covered including

morphological parsing, nominalization, stress, syllable structure, diphthongization, gender, morphophonemic alternations, and epenthesis. An appendix is included that serves as a primer on quantitative linguistic research. It discusses how some of the cited experiments were carried out, provides an introduction to statistical analysis, and discusses tools that are

available for conducting quantitative research on the Spanish language.

Born in Zacatecas, Mexico, in the mid-sixteenth century, Don Juan was the prominent son of an aristocratic silver-mining

family. In 1598, in his late forties, Oñate led a formidable expedition of settlers, with wagons and livestock, on an epic march northward to the upper Rio Grade Valley of New Mexico. There he established the first European settlement west of the Mississippi, launching a significant chapter in early American history. In his activities he displayed qualities typical of Spain's

sixteenth-century men of action; in his career we find a summation of the motives, aspirations, intentions, strengths, and weaknesses of the Hispanic pioneers who settled the Borderlands.
