Operation Tidal Wave was one of the
boldest and most controversial air raids
by the United States Army Air Forces

(USAAF). At the time, the Romanian Ploesti oil fields produced about a third of all Axis oil, and was Germany's single most important fuel source. In the summer of 1943, the USAAF decided to stage a major raid on Ploesti from air bases in Libya. The resulting Operation Tidal Wave raid on 1 August 1943 was one of the costliest to date, losing 53 aircraft, about a third of the starting force. Of the more than 150 bombers that took part in the raid, only 88 B-24s returned to Libya, 55 of which were damaged. On the other hand, of the 17 Medals of Honor awarded to US soldiers and airmen from Pearl Harbor in 1941 to D-Day in 1944, 5 were awarded to pilots of the Tidal Wave mission in recognition of their extraordinary performance. Although undoubtedly bold and heroic,

the mission had questionable results. Initial assessments argued that the mission caused 40% of the refinery capacity at Ploesti to be lost but subsequent studies concluded that the damage was quickly repaired and that output had exceeded August levels within a month. This new study examines the raid in detail, exploring the reasons why its dubious success came at such a high price. Supported by maps, diagrams, and full-colour artwork including battlescenes and bird's-eye views, this is the full story of the audacious Ploesti raid of 1943.

Jagdgeschwader 52 (JG 52) was the most successful and highest-scoring fighter unit, not just in Germany's World War 2

Luftwaaffe, but in the entire annals of aviation history. No other fighter group has ever come close to matching its staggering total of around 9000 enemy aircraft shot down in combat. And yet, because much of that combat took place over the tractless wastes of the Russian front, very little has been written in English about the exploits of this charismatic unit. This book provides a full combat history of JG 52 and its members, including the three top-scoring aces of all time, who claimed a total of 900 victories between them.

Soviet fighter aviation suffered terribly at the hands of the Jagdwaaffe in the first year of the war in the east and, with the arrival of JG 51 and its Fw 190s on the

Stalingrad Front in September 1942, things only got worse. However, help was on its way in the form of the La-5. Tougher, faster, and with a greater rate of climb than its predecessors, most were flown by a new generation of better-trained pilots led by combat veterans. These new fighters soon found themselves pitted into action on the Central Sector against the equally new Fw 190As of JG 51. From then on, these two fighters would battle it out in the skies over the Eastern Front. This book tells the complete story of the battles between these two important fighters.

Defeat in North Africa and the disastrous loss of Sixth Army at Stalingrad were undoubtedly huge blows to the

Wehrmacht, but the most critical battle of 1943 was fought at Kursk. In the spring of 1943, the Russian front bulged into the German lines between Kharkov and Orel. Here, in July, German forces tried to regain the initiative on the Russian Front by a planned attack to pinch off this salient and straighten the front, but forewarned, the Soviets absorbed the German thrust and counterattack. The climax to this titanic clash of forces was the battle at Kursk, scene of the largest tank battle in history, where German land forces were defeated and forced to retreat in the face of an unstoppable Soviet counterattack. Is it against this background that in this 96-page tile, Christer Bergstrom, an acknowledged expert on the air-war in Russia,

describes the activities of the Luftwaffe's fighter-force in its battles over the Russian Front.

The Battle of Sicily Bloomsbury Publishing

Describes how the German Army Group centre developed a 'master of defence' strategy, which inflicted atrocious losses on the Red Army's attack formations in 1942 and 1943. Explores the German defensive operations around the River Dnepr and Sea of Azov in September 1943, as well as the subsequent German retreat and the air bridge operation to Cherkassy in early 1944. Examines the major Soviet offensive in mid 1944, the fall of Romania and the autumn battles in Poland, Courland and on the Vistula, ending with the major Soviet winter offensive of early 1945 against the

Neisse and Oder rivers and last-ditch battles over Berlin itself.

Aces of the Reich Ian Allan Publishing
The Focke-Wulf Fw 190 was arguably the Luftwaffe's most outstanding piston-engine fighter of the Second World War, virtually dominating the skies over Europe for more than a year after its initial introduction into service in the summer of 1941. Continual development and improvements then kept it at the forefront of operations in the theaters of

Northern Europe, the Mediterranean and the Eastern Front for the remainder of the war, while maintaining a competitive edge over many other types as well as gaining and retaining the grudging respect of those Allied pilots who faced it in combat. Despite being designed as a fighter, the BMW 801-powered Fw 190 sub-types performed practically every role possible for a single-engine, single-seat aircraft – including offensive and defensive day fighter, day and night fighter-bomber, ground attack, reconnaissance platform, night-fighter and trainer. The Fw 190A also served in the Hungarian Air Force during the later stages of the Second World War, the Turkish Air Force from mid-1942 to 1948, and post-war with the French, where the SNCAC aircraft company rebuilt over fifty

Fw 190A-5/A-6s under the designation NC 900 for service with the new Armée de l'Air. Despite having standard factory-applied camouflage and markings schemes, many Fw 190s were also finished in a variety of 'on unit' and 'seasonal' and/or operational theater schemes which add to the aircraft's story.

Modelling a Focke-Wulf Fw 190A-4 Ian Allan Publishing

Follow this amazing aircraft from its pre-war prototype development and flight testing through the evolution of the different models, from the 109B through the 109K. Scutts provides details of the 109's different roles throughout the war and the varied battlegrounds over which it flew. Exceptional!

One of the most successful of the high-scoring Luftwaaffe Jagdgeschwader during World War 2, JG 54 'Grünherz' (Green Hearts) was formed from three disparate fighter 'Gruppen' immediately prior to the Battle of Britain. Having enjoyed immediate success over the Channel and South-east England during the summer of 1940, the unit was transferred to the Eastern Front in the spring of 1941 in preparation for Operation Barbarossa the German invasion of the Soviet Union. JG 54 would remain a Jagdwaaffe stalwart in the east, flying firstly Bf 109Fs and then the Fw 190. By war's end, the Geschwader's pilots had claimed over 9500 kills, and produced over 100 aces. Men like Hans Philipp, Walter Nowotny and Otto Kittel are profiled in this

volume, which reveals the struggle in the face of overwhelming odds that was the lot of the Jagdflieger on the Eastern Front.

The Battle of Sicily is the story of Germany's "Dunkirk"--a successful evacuation that allowed 40,000 troops to escape to Italy, where they later fought the Allies to a bloody stalemate. The authors recount the campaign from the

Axis strategy point of view--something no English-language book has ever done--and argue persuasively that the Allies wasted a chance for a total victory that might have foreshortened the war.

A thorough look at this turning-point WWII aerial battle, with eyewitness accounts, maps, and rare photos: "incredibly well-researched" (Aircrew Book Review). By late summer 1940, Nazi Germany had conquered all its opponents on the continent, including the British Army itself, which was forced to scramble back aboard small boats to its shores. A non-aggression pact with the Soviet Union in hand, Hitler had only one remaining object that season—the

British Isles themselves. However, before he could invade, his Luftwaaffe needed to wipe the Royal Air Force from the skies. History's first strategic military campaign conducted in the air alone was about to take place. This book contains a large number of dramatic eyewitness accounts, even as it reveals new facts that will alter common perceptions of the battle. For example, the twin-engined Messerschmitt Bf 110 was actually a good day fighter, and it performed at least as well in this role as the Bf 109 during the battle. The Luftwaaffe's commander, Hermann Göring, performed far better than has been believed. The British night bombers played a more decisive role than previously thought; in addition, this book disproves that the German 109 pilots

were in any way superior to their Hurricane or Spitfire counterparts. The author has examined records from both sides and provides surprising statistics that shatter much conventional wisdom—laying out the Battle of Britain as seldom seen before. Includes color photos of the relevant aircraft.

The battle of Stalingrad was the turning point of World War II. The German capture of the city, their encirclement by Soviet forces shortly afterwards, and the hard-fought but futile attempts to relieve them, saw bitter attritional fighting and extremes of human misery inflicted on both sides. The surrender of General Friedrich von Paulus's army left Germany's eastern armies severely weakened, but the Red Army had suffered enormous losses as it

overreached itself in trying to exploit its great victory. The war was not over. Germany would continue the fight, and the battles that took place in the winter of 1942/43 would show the tactical and operational skill of Erich von Manstein and the Wehrmacht as they attempted to avert total disaster. In this title, now available in paperback, a renowned expert on warfare on the Eastern Front reveals the often-overlooked German

counteroffensive post-Stalingrad, and how it prevented the whole Axis front line from collapsing. Drawing on first-hand accounts, *On a Knife's Edge* is a story of brilliant generalship, lost opportunities and survival in the harshest theatre of war.
