Metaethics: A Contemporary Introduction  
provides a solid foundation in metaethics  
for advanced undergraduates by  
introducing a series of puzzles that most  
metaethical theories address. These  
puzzles involve moral disagreement,  
reference, moral epistemology,  
metaphysics, and moral psychology. From  
there, author Mark van Roojen discusses

the many positions in metaethics that  
people will take in reaction to these  
puzzles. Van Roojen asks several essential  
questions of his readers, namely: What is  
metaethics? Why study it? How does one  
discuss metaethics, given its inherently  
controversial nature? Each chapter closes  
with questions, both for reading  
comprehension and further discussion,  
and annotated suggestions for further  
reading.

Rise and Fall of Sanskrit (Revised Edition)

Createspace Independent Pub

Caution: this book is a document from the  
future, on how the United States finally

split into two independent republics in  
2029, and its aftermath. The topic is so  
sensitive, that its futuristic author must be  
identified merely as John Doe, Ph.D.  
Dateline: 2029. The "One Nation,  
Indivisible, ....." finally divides. - A political  
satire.

Fractals of Ethics - a Drama in Three Acts

Ludwig von Mises Institute

Ethics: History, Theory, and Contemporary  
Issues, Fifth Edition, features sixty-nine  
selections organized into three parts,  
providing instructors with great flexibility  
in designing and teaching a variety of  
courses in moral philosophy. Spanning

2,500 years of ethical theory, the first part, Historical Sources, ranges from ancient Greece to the twentieth century. It moves from classical thought through medieval views to modern theories, culminating with leading nineteenth- and twentieth-century thinkers. The second part, Modern Ethical Theory, includes many of the most important essays of the past century. The discussion of utilitarianism, Kantianism, egoism, and relativism continues in the work of major contemporary philosophers, while landmark selections reflect concern with moral language and the justification of morality. The concepts of duty, justice, and rights are explored, as well as recent views on cultural relativism and an ethic influenced by feminist concerns. In the third part, Contemporary Moral Problems, the readings present the current debates over abortion, euthanasia, famine relief, animal rights, environmentalism, and the use of torture in interrogations, as well as essays on death and the meaning of life. Wherever possible, each reading is printed in its entirety. The fifth edition features new readings from Cicero, Barbara Herman, and Judith Jarvis

Thomson; an expanded selection from Joseph Butler's Fifteen Sermons; and a new translation of Kant's Groundwork for the Metaphysics of Morals. In addition, the book is supplemented for the first time by a robust support package. An Instructor's Resource CD contains reading summaries, essay questions, multiple-choice and true/false questions, PowerPoint-based lecture outlines, and relevant website links. A Companion Website at [www.oup/us/cahn](http://www.oup/us/cahn) provides most of the material from the Instructor's Resource CD along with student resources including interactive self-quizzes, questions for discussion, and helpful links.

John Wiley & Sons

Section I examines historical philosophical understandings of expertise in order to situate the current institution of bioethics. Section II focuses on philosophical analyses of the concept of expertise, asking, among other things, how it should be understood, how it can be acquired, and what such expertise warrants. Finally, section III addresses topics in bioethics and how ethics expertise should or should not be brought to bear in these areas, including expertise in the court room, in

the hospital room, in the media, and in making policy. 2. A GUIDED HISTORICAL TOUR As Scott LaBarge points out, Plato's dialogues can be viewed as an extended treatment of the concept of moral expertise, so it is fitting to begin the volume with an examination of "Socrates and Moral Expertise". Given Socrates' protestations (the Oracle at Delphi notwithstanding) that he knows nothing, LaBarge observes that it would be interesting to determine both what a Socratic theory of moral expertise might be and whether Socrates qualified as such an expert. Plato's model of moral expertise is what LaBarge calls "demonstrable expertise", which is concerned mainly with the ability to attain a goal and to explain how one did it. The problem with this account is that when one tries to solve the various problems in the model - for example, allowing that moral expertise is not an all-or-nothing skill - then one is immediately faced with the "credentials problem". As LaBarge puts it, ". . .

The 100 Greatest Lies in physics is a follow-up to Ray Fleming's The Zero-Point Universe as he continues to explore the importance of zero-point energy to modern physics. Since before the start of this century, evidence has mounted that space is not empty. Space is filled with quantum vacuum fluctuations called zero-point energy, and this energy is a modern form of aether. Most of the physics of the past century, which led to today's standard model, fails to account for this

modern aether. In relativity theory there are two types of relativity, one that includes aether and one that rejects it. Physicists choose poorly and wrongly champion the theory that rejects the modern aether. Even though many theories like this are now known to be invalid, physicists still cling to the physics of the past. The mainstream physics of the last century is a complete disaster due to physicists' failure to incorporate zero-point energy into their explanations of forces and every day phenomena. The 100 Greatest Lies in Physics catalogs many of the most outrageous mistakes in physics in hopes that physicists will do their jobs and stop lying to everyone.

**A Memoir of Andy Griffith and Mount Airy North Carolina** Sagwan Press

Jerry Thigpen's study on the history of the Combat Talon is the first effort to tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical event in the spectrum of conflict and by any measure is the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare

(UW) assets that were limited in both lift capability and speed the Talon I quickly adapted to theater UW tasking including infiltration and resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome of the operation the Talon I cemented its reputation as the weapons system of choice for long-range clandestine operations. In the period following the Vietnam War United States Air Force (USAF) special operations gradually lost its political and financial support which was graphically demonstrated in the failed Desert One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed hard-driven officers as Brenci Uttaro Ferkes Meller and Thigpen the crew force became the most

disciplined in our Air Force. It was capable of penetrating hostile airspace at night in a low-level mountainous environment covertly to execute any number of unconventional warfare missions.

**The Great Separation** Wadsworth Publishing Company

Socrates said that moral philosophy deals with 'no small matter, but how we ought to live'. Beginning with a minimum conception of what morality is, the author offers discussions of the most important ethical theories. He includes treatments of such topics as cultural relativism, ethical subjectivism, psychological egoism, and ethical egoism.

*Taking Account of Utilitarianism*

Createspace Independent Publishing Platform

Examines the philosophical aspects of the treatment of animals and argues that animals have a basic moral right to respectful treatment

*Metaethics* Oxford University Press, USA

Michael Tomasello offers the most detailed account to date of the evolution of human moral psychology. Based on experimental data comparing great apes and human children, he reconstructs two key

evolutionary steps whereby early humans gradually became an ultra-cooperative and, eventually, a moral species capable of acting as a plural agent "we".

*Ethics* CreateSpace

Closely examine the major areas of ethical theory as well as a broad range of contemporary moral debates using MacKinnon's acclaimed ETHICS: THEORY AND CONTEMPORARY ISSUES, International Edition. Illuminating overviews and a selection of readings from both traditional and contemporary sources make even complex philosophical concepts reader friendly. Comprehensive, clear-sighted introductions to general and specific areas of ethical debate cover major ethical theories, including feminist ethics, contract theory, and ethical relativism, before delving into issues ranging from euthanasia and sexual morality to war and globalization. A broader range of voices and philosophical traditions in this edition includes continental and non-Western philosophers, with new readings from prominent ethicists. Increased coverage of contemporary dilemmas highlights issues of widespread interest, including torture

and terrorism, "partial birth" abortion, cloning, same-sex marriage, and global distributive justice. An innovative online resource center offers, among other things, animated simulations. These simulations allows you to personally engage with dilemmas and thought experiments commonly presented in introduction to ethics classes and provide instructors with a way to seamlessly integrate online assignments into the class.

Part of the World is the most extensive biographical account of Heinz von Foerster, the "Socrates of Cybernetics." The book reflects the significance of von Foerster's over-ninety-year-long life against the background of world and scientific history. In a fascinating dialog with Monika Broecker, who asks smart and empathic questions, von Foerster relates his life story and his most important thoughts. Many photographs are reproduced, some of them published here for the first time. This American edition is translated from German by Barbara Anger-Diaz and contains a forward by Ernst von

Glaserfeld.

History of Ethics DIANE Publishing

Explores the ethical, legal, and societal issues arising from brain imaging, psychopharmacology, and other new developments in neuroscience. Neuroscience increasingly allows us to explain, predict, and even control aspects of human behavior. The ethical issues that arise from these developments extend beyond the boundaries of conventional bioethics into philosophy of mind, psychology, theology, public policy, and the law. This broader set of concerns is the subject matter of neuroethics. In this book, leading neuroscientist Martha Farah introduces the reader to the key issues of neuroethics, placing them in scientific and cultural context and presenting a carefully chosen set of essays, articles, and excerpts from longer works that explore specific problems in neuroethics from the perspectives of a diverse set of authors. Included are writings by such leading scientists, philosophers, and legal scholars as Carl Elliot, Joshua Greene, Steven Hyman, Peter Kramer, and Elizabeth Phelps. Topics include the ethical dilemmas of cognitive enhancement;

issues of personality, memory and identity; the ability of brain imaging to both persuade and reveal; the legal implications of neuroscience; and the many ways in which neuroscience challenges our conception of what it means to be a person. Neuroethics is an essential guide to the most intellectually challenging and socially significant issues at the interface of neuroscience and society. Farah's clear writing and well-chosen readings will be appreciated by scientist and humanist alike, and the inclusion of questions for discussion in each section makes the book suitable for classroom use. Contributors Zenab Amin, Ofek Bar-Ilan, Richard G. Boire, Philip Campbell, Turhan Canli, Jonathan Cohen, Robert Cook-Degan, Lawrence H. Diller, Carl Elliott, Martha J. Farah, Rod Flower, Kenneth R. **A Contemporary Introduction** Wiley-Blackwell

It is astonishing to think that many great archaeological discoveries occurred in Egypt only by way of accident during the 19th and 20th centuries. Even today accidents still play a vital, frequent and sometimes comical role, with new discoveries happening almost weekly and with many more secrets of the ancient Egyptian civilization still remaining. This book takes readers beyond these discoveries and their associated accidents. This book cannot be considered purely as an Egyptological and archaeological reading or even as dry history pages covering Egypt's modern era of the 19th and 20th centuries. Rather, it is a book that sheds light on the intimate links between the birth of Egyptology after the deciphering of the famous Rosetta Stone and the raging world politics and regional power shifts in Egypt and its surroundings. The book ties together the political storms of colonialism in the first half of the 19th

century and the unsettling effect these upheavals had on Egypt during the reign of Mohamed Ali Pasha. In a storytelling style, the book is a journey through time and place. The book takes readers on a guided tour to most of Egypt's well-known monuments that were mainly discovered by simple accident or in which an accident played a major part leading to discovery. In addition, the book leads readers through time exploring ancient Egypt, the days of the pharaohs, ancient gods, rituals and public ceremonial festivals, with old and new stories that shed light on the true value of such discoveries in antiquity and modern day.

**The Famous Temples of a Remarkable Civilization - Ancient Egypt History Books for 4th Grade | Children's Ancient History** Courier Corporation  
Poetry. "HIDDEN DEATH, HIDDEN ESCAPE is an occulted text osmotically invading the public soil by spawning its cyclic seed in the most fertile territory. By an ingenious language, Liviu Georgescu's wayward helium imagination becomes an existential zone diving in the darkened nautical scars of being. His poems transmute the waters from the

Transylvanian Alps to a scorpion running through a purgatorium. His poetry, in contrast to quotidian description, opens up a visionary fervor invoking a tradition which runs from Blake and Holderlin through T.S. Eliot and Breton into the present"-Will Alexander.

Nicomachean Ethics Createspace Independent Publishing Platform  
From the unbridled lands of East Texas, tenacious men with diverse backgrounds came together to form the Twenty-Second Texas Infantry. Also known as Hubbard's regiment, families synonymous with the Texas Revolution joined the ranks of politicians, attorneys, farmers, and teachers. Many championed Southern values whereas some campaigned for Northern agendas. Yet, most were Texan by choice and they sought to defend their homes. The regiment's stories of triumph and sorrow intertwined with American history as the men drudged across the unforgiving lands west of the Mississippi River. They fought in the bloody encounters of Fort DeRussy, Mansfield, Pleasant Hill, and Jenkins' Ferry as life-threatening diseases complicated their service. Their ambitious marches forever

tied them to the story of Texas during the Civil War.

Shades of Blue - 30 Years of (un) Ethical Policing is an entertaining and interesting journey into the moral/ethical dilemmas that challenge police officers. It is written as the memoir of the main character and contains accounts of riveting events in the author's career. The authentic presentation places readers right in the

middle of the action. If you have ever wondered about the real culture of law

enforcement, this book lets you walk in their shoes. The author's street philosophy, acquired over 30 years as a

police officer, makes for engaging and humorous reading.
